

ADS1261 and ADS1235 Evaluation Module

ADS1261, ADS1235 Evaluation Module (ADS1261EVM Shown)

The ADS1261EVM and ADS1235EVM are evaluation module kits providing hardware and software support for evaluation of the ADS1261, or ADS1235, delta-sigma analog-to-digital converter (ADC). The kit utilizes the TM4C1294NCPDT processor to communicate with the ADC via SPI and provide communication with a PC over a USB interface. The EVM kit also includes a USB micro cable and a downloadable software application that runs on a PC, allowing for register manipulation and data collection from the ADC.

This document includes a detailed description of the hardware (HW), software setup and use, bill of materials, and schematic for the EVM.

Throughout this document, the term *EVM* is synonymous with ADS1261EVM and ADS1235EVM, demonstration kit, and evaluation module. The term *GUI* is synonymous with *Delta-Sigma ADC Evaluation Software*, core application, and EVM software. The use of *Tiva™* is synonymous with the TM4C1294NCPDT microcontroller.

1 EVM Overview

1.1 Description

This user guide describes the operation and use of the ADS1261 and ADS1235 evaluation module. The EVM platform is intended for evaluating the ADS1261 or ADS1235 performance and functionality.

1.2 Requirements

1.2.1 Software Requirements

PC with Microsoft® Windows® 7 or higher operating system.

1.2.2 Hardware Requirements

PC with available USB 2.0 or greater connection.

1.2.2.1 Power Supply

USB powered.

1.3 Software Reference

For the core software documentation, see the [Delta-Sigma ADC Evaluation Software User Manual](#) or navigate to the *File -> About* option from within the GUI, then click on the *Software user guide* icon.

1.4 Supported Functionality

1.4.1 Hardware Functionality

The EVM features the following hardware capabilities:

- Onboard 5-V unipolar and ± 2.5 -V bipolar AVDD and AVSS supplies
- Onboard 3.3-V DVDD supply
- Digital header for external processor or controller configuration
- Analog header and configurable input circuitry for direct sensor connections
- Fault LED for STATUS or CRC error notification
- Place holder for optional REF62xx external reference source

1.4.2 Software Functionality

The EVM features the following software functions:

- Device conversion control
- Device software reset
- Device power down
- Register read and write
- Conversion result readback
- Self offset and system input calibration
- Readback of STATUS and CRC data bytes(for error detection)

2 Quick Start

This section provides a guide to quickly begin using the EVM.

2.1 Default Jumper and Switch Configuration

The EVM is configured with the settings listed in [Table 2](#) and illustrated in [Figure 1](#).

Table 2. Default Settings

Jumper	Position	Function
JP1	(Not Installed)	Use onboard processor
JP2	(Not Installed)	USB-derived supplies ON
JP3	(Not Installed)	DVDD from USB power (1-2 connection via R94)
JP4	(Not Installed)	AVDD from USB power (1-2 connection via R95)
JP5	(Not Installed)	N/A
Jumper	Position	Function
S1	Right	Unipolar analog supply (AVDD = 5 V, AVSS = 0 V)

Figure 1. Default Configurations for ADS1261 and ADS1235 EVM

2.2 Powering the EVM

The EVM is powered through the USB interface with the PC. Follow the installation and connection procedure in [Section 2.3](#) before connecting the EVM to the PC. Sections [Section 2.2.1](#) and [Section 2.2.2](#) provide additional details about the analog and digital power supply configurations of the ADC.

2.2.1 Analog Supply Configuration of the ADC

The ADS1261 (or ADS1235) analog supply requires a 5-V source connected between the AVDD and AVSS pins. The EVM provides onboard 5-V, 2.5-V and -2.5-V supply rails to allow for both unipolar and bipolar supply polarities, respectively. The analog supply polarity can be selected by S1.

NOTE: When switching S1, the ADC may experience a temporary brown-out which causes the device configurations to be reset to the default power on configurations. TI recommends disconnecting the USB cable from the EVM, toggling the switch, and then reconnecting the USB cable to avoid any communication issues with the PC software.

R33 may be used to measure the AVDD supply current, either by determining the voltage drop across this resistor or by removing the resistor and connecting a dc current meter between the "A+" and "A-" test points.

2.2.2 Digital Supply Configuration of the ADC

The ADS1261 (or ADS1235) digital supply requires a 2.7- to 5.25-V source connected between DVDD and DGND. The EVM provides a (typical) 3.3-V onboard supply for the digital supply of the ADC.

R38 may be used to measure the DVDD supply current, either by determining the voltage drop across this resistor or by removing the resistor and connecting a dc current meter between the "D+" and "D-" test points.

2.3 Software Installation and Hardware Connection Procedure

Follow the steps below to use the EVM for the first time:

1. Download all required software from <http://www.ti.com/tool/ads1261evm> (for the ADS1261EVM) or <http://www.ti.com/tool/ads1235evm> (for the ADS1235EVM).
2. Install the GUI software (*DELTASIGMAEVAL-GUI*) on the PC.
3. Install the device package software on the PC. (*ADS1261EVM-DVCPKG* for the ADS1261EVM, or *ADS1235EVM-DVCPKG* for the ADS1235EVM.)
4. Ensure all jumpers and switches are configured in the default configuration per [Table 2](#) and [Figure 1](#).
5. Connect the EVM to the PC using the provided USB cable.
6. If prompted, install any required drivers.
7. Start the GUI application on your PC. The GUI should automatically detect the connected EVM.

3 Hardware Reference

3.1 Jumper and Switch Configuration Reference

Table 3 provides all jumper and switch configuration settings for the EVM.

Table 3. Jumper and Switch Options

Jumper	Position	Description
JP1	Operation of EVM with external digital signals	
	Installed (ON)	Hold Tiva processor (U9) in reset and disable level shifters to allow external digital signals
	Uninstalled (OFF)	Normal operation with onboard Tiva processor (default)
JP2	Power down USB power supplies	
	Installed (ON)	USB-derived power supplies disabled and powered down
	Uninstalled (OFF)	USB-derived power supplies enabled and ON (default)
JP3	Digital supply source	
	1–2 shorted	Digital supply (U19) powered from USB power (default using R94 as the short)
	2–3 shorted	Digital supply (U19) powered from external supply source
	Open	No digital system power provided
JP4	5-V supply source	
	Installed (ON)	5-V supply powered from USB (default using R95 as the short)
	Uninstalled (OFF)	No analog supply powering AVDD
JP5	EXT_5V supply power down	
	Installed (ON)	External supply regulator (U18-not installed) disabled
	Uninstalled (OFF)	External supply regulator (U18-not installed) enabled (default)
Switch	Position	Description
S1 ⁽¹⁾	AVDD and AVSS supply polarity switch	
	Right (pin connections: 5–6, 2–3)	Unipolar supply (AVDD = 5 V, AVSS = GND) (default)
	Left (pin connections: 5–4, 2–1)	Bipolar supply (AVDD = 2.5 V, AVSS = –2.5 V)
S2	Tiva reset (U1 $\overline{\text{RST}}$) button	
	Closed (depressed)	Tiva held in reset, level shifters (U6, U7, and U8) tri-stated
	Open (normally)	Normal operation (default)
S3	Reset FAULT button	
	Closed (depressed)	Clears FAULT LED indicator and writes 0x00 to the STATUS register of the ADC
	Open (normally)	Normal operation (default)
S4	BSL button for <i>Device Firmware Update</i> (DFU) mode	
	Closed (depressed on RESET)	Total Tiva FLASH erasure (on reset Tiva enumerates as a DFU device)
	Open (normally)	Normal operation (default)

⁽¹⁾ Switch is DPDT. Pin 1 is identified with a dot on the PCB silkscreen.

3.2 Header, Connector, and Test Point Reference

This section provides the connection information and details for all of the connectors and test points utilized on the EVM.

3.2.1 Analog Input Terminal Blocks

Analog input to the EVM can be connected at the terminal blocks located on the left side of the board (see [Figure 2](#)) to provide external analog signal input to the EVM for evaluation purposes. The functions for these terminal blocks are listed in [Table 4](#). At no time should a voltage be applied that exceeds the absolute maximum ratings for the input of the ADS1261 or ADS1235.

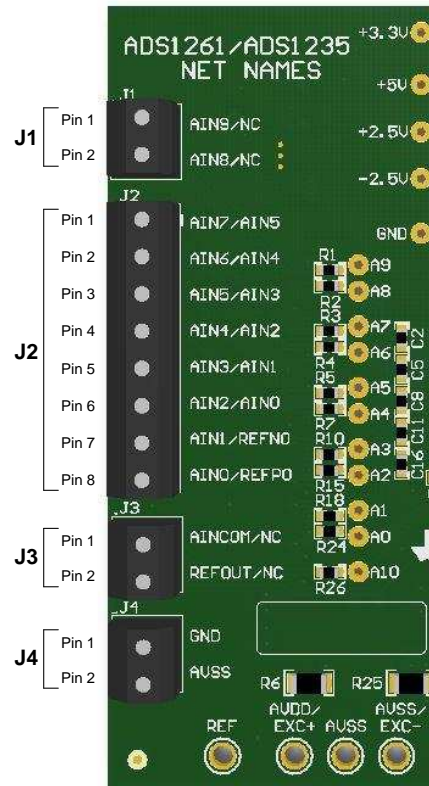

Figure 2. Input Terminal Blocks (ADS1261EVM Shown)

Table 4. Analog Input Terminal Blocks, J1–J4

Pin	Function	Test Point	ADS1261 Input Pin	ADS1235 Input Pin
J1 (ADS1261EVM only)⁽¹⁾				
1	Analog input ⁽²⁾	A9	AIN9	–
2	Analog input ⁽²⁾	A8	AIN8	–
J2				
1	Analog input ⁽²⁾	A7	AIN7	AIN5
2	Analog input ⁽²⁾	A6	AIN6	AIN4
3	Analog input ⁽²⁾	A5	AIN5	AIN3
4	Analog input ⁽²⁾	A4	AIN4	AIN2
5	Analog input ⁽²⁾	A3	AIN3	AIN1
6	Analog input ⁽²⁾	A2	AIN2	AIN0
7	Analog input ⁽²⁾	A1	AIN1	REFN0
8	Analog input ⁽²⁾	A0	AIN0	REFP0
J3(ADS1261EVM only)⁽¹⁾				
1	Analog input ⁽²⁾	A10	AINCOM	–
2	Reference output	–	REFOUT	–
J4				
1	GND	–	DGND	DGND
2	AVSS ⁽³⁾	–	AVSS	AVSS

⁽¹⁾ J1 and J3 are not populated on the ADS1235EVM.

⁽²⁾ Analog inputs are pinned out to terminal blocks through RC filters. Refer to [Figure 14](#) for additional connection details.

⁽³⁾ The AVSS voltage is set by the S1 switch position.

3.2.2 External Clock

By default, a clock is supplied by the internal oscillator of the ADC when the CLKIN pin is pulled low. However, the EVM also provides the capability to connect an external clock directly to the ADC using the J6 connector (see [Figure 16](#)). When connecting to J6, a direct connection can be made between pins 42 (CLKIN) and 40 (GND). A typical clock source of 7.3728 MHz (or 10.24 MHz for 40 kSPS mode, on the ADS1261) will track with all timing shown in the respective product datasheet (refer to [Table 1](#)).

NOTE: The CLKIN pin connects to the Tiva microcontroller. The microcontroller holds the CLKIN pin low in order to enable the internal oscillator of the ADC. Before connecting an external clock, disable the GPIO output on this pin by sending the "HOLDLOCK 0" command, described in [Table 7](#).

3.2.3 Digital Interface Header

Table 5 lists the functions and pin numbers for all signals used on the J6 digital interface header.

The J6 header allows for the connection to a logic analyzer or when the EVM is used in a stand-alone configuration for connections to an external microprocessor or microcontroller. If controlling the ADS1261 with an external processor, power down the onboard TM4C1294NCPDT by placing a jumper on JP1. This configuration can be accomplished by soldering a wire between the JP1 terminals or by installing a 2-pin, 0.1-in spaced header that has the pins shorted with a shorting block (see Table 3).

Table 5. Digital Interface, J6

Function	ADC Side		Processor Side	
	Signal Name	Pin Number ⁽¹⁾	Pin Number ⁽²⁾	Signal Name , Tiva Connection ⁽³⁾
External voltage input	GND	56	55	EXT_5V
Bank3 level-shifter voltage	DVDD	54	53	LVDD1
GPIO for ADC	FAULT_LED	52	51	PD7
	EXT_CLK	42	41	PD3 (Unused)
Bank2 level-shifter voltage	DVDD	36	35	LVDD2
ADC GPIO	ADC_nPWDN	34	33	PA0
SPI0	ADC_nDRDY	32	31	PA1
	ADC_SCLK	30	29	PA2 (SSIOCLK)
	ADC_nCS	28	27	PA3
	ADC_MOSI (DIN)	26	25	PA4 (SSIOXDAT0)
	ADC_MISO (DOUT)	24	23	PA5 (SSIOXDAT1)
ADC GPIOs	ADC_START	22	21	PA6
	ADC_nRESET	20	19	PA7
Bank1 level-shifter voltage	DVDD	18	17	LVDD3 (Unused)

⁽¹⁾ Even-numbered pins not included in this list are connected to GND.

⁽²⁾ Odd-numbered pins not included are connected to the Tiva microcontroller (after passing through level shifters) but the functionality is not used for this EVM. For connection details, see Figure 16.

⁽³⁾ Signals connected to the Tiva microcontroller are named according to their respective processor pin connections. For connection details, see Figure 16.

3.2.4 Test Points

The test points listed in Table 6 may be used to probe onboard voltage supplies and signals.

Table 6. Useful Test Points

Function	Signal Name	Restrictions
ADC side		
Analog input (ADS1261EVM: AIN9)	A9	Probe only
Analog input (ADS1261EVM: AIN8)	A8	Probe only
Analog input (ADS1261EVM: AIN7, ADS1235EVM: AIN5)	A7	Probe only
Analog input (ADS1261EVM: AIN6, ADS1235EVM: AIN4)	A6	Probe only
Analog input (ADS1261EVM: AIN5, ADS1235EVM: AIN3)	A5	Probe only
Analog input (ADS1261EVM: AIN4, ADS1235EVM: AIN2)	A4	Probe only
Analog input (ADS1261EVM: AIN3, ADS1235EVM: AIN1)	A3	Probe only
Analog input (ADS1261EVM: AIN2, ADS1235EVM: AIN0)	A2	Probe only
Analog input (ADS1261EVM: AIN1, ADS1235EVM: REFN0)	A1	Probe only
Analog input (ADS1261EVM: AIN0, ADS1235EVM, REFP0)	A0	Probe only
Analog input (ADS1261EVM: AINCOM)	A10	Probe only

Table 6. Useful Test Points (continued)

Function	Signal Name	Restrictions
External bridge supply (EXC+ positive supply)	AVDD/EXC+	Remove R6 before connecting to an external supply, and consider the input common mode voltage of the ADC when setting EXC+ voltage
External bridge supply (AVSS "ground" reference)	AVDD	For external supply ground reference only. Do not apply a voltage to this test point.
External bridge supply (EXC- negative supply)	AVSS/EXC-	Remove R25 before connecting to external supply, and consider the common mode voltage of the ADC when setting EXC- voltage
REF62xx, U2 supply	U2-1 (REF)	Remove R27 before connecting to external supply. External supply source must be referenced to AVSS. Do not violate absolute maximum ratings of U2.
AVDD current measurement (source)	AVDD (A+)	Probe only
AVDD current measurement (sink)	U3-4 (A-)	Probe only
DVDD current measurement (source)	DVDD (D+)	Probe only
DVDD current measurement (sink)	U3-17 (D-)	Probe only
5-V supply	+5V	Probe only
3.3-V supply	+3.3V	Probe only
2.5-V supply	+2.5V	Probe only
Ground	GND	Probe only
-2.5-V supply	-2.5V	Probe only
Processor Side		
USB "VBUS" supply (source)	USB_VBUS (VBUS+)	Probe only
USB "VBUS" supply (sink)	USB_VBUSP (VBUS-)	Probe only
5.5-V, U15 output	USB_BOOST (+5.5V)	Probe only
1.8-V, U17 output	+1.8V	Probe only
5.0-V, U16 output	+5V	Probe only
Ground	GND	Probe only
3.3-V, U19 output	+3.3V	Probe only
Step-up dc/dc converter, U23 (not populated) output	HVBoost	Probe only
High-voltage linear regulator, U24 (not populated) output	+HVDD	Probe only
Inverting dc/dc converter, U25 (not populated) output	HVInvert	Probe only
Negative high-voltage linear regulator, U26 (not populated) output	-HVSS	Probe only

4 Software Details

4.1 Installing the Software

4.1.1 Delta-Sigma ADC Evaluation Software

Download the *Delta-Sigma ADC Evaluation Software* installer from the [DELTA-SIGMAEVAL-GUI](#) page and save to a known folder. Run the installer and follow the on-screen prompts. Note that future software versions may show slightly different screens.

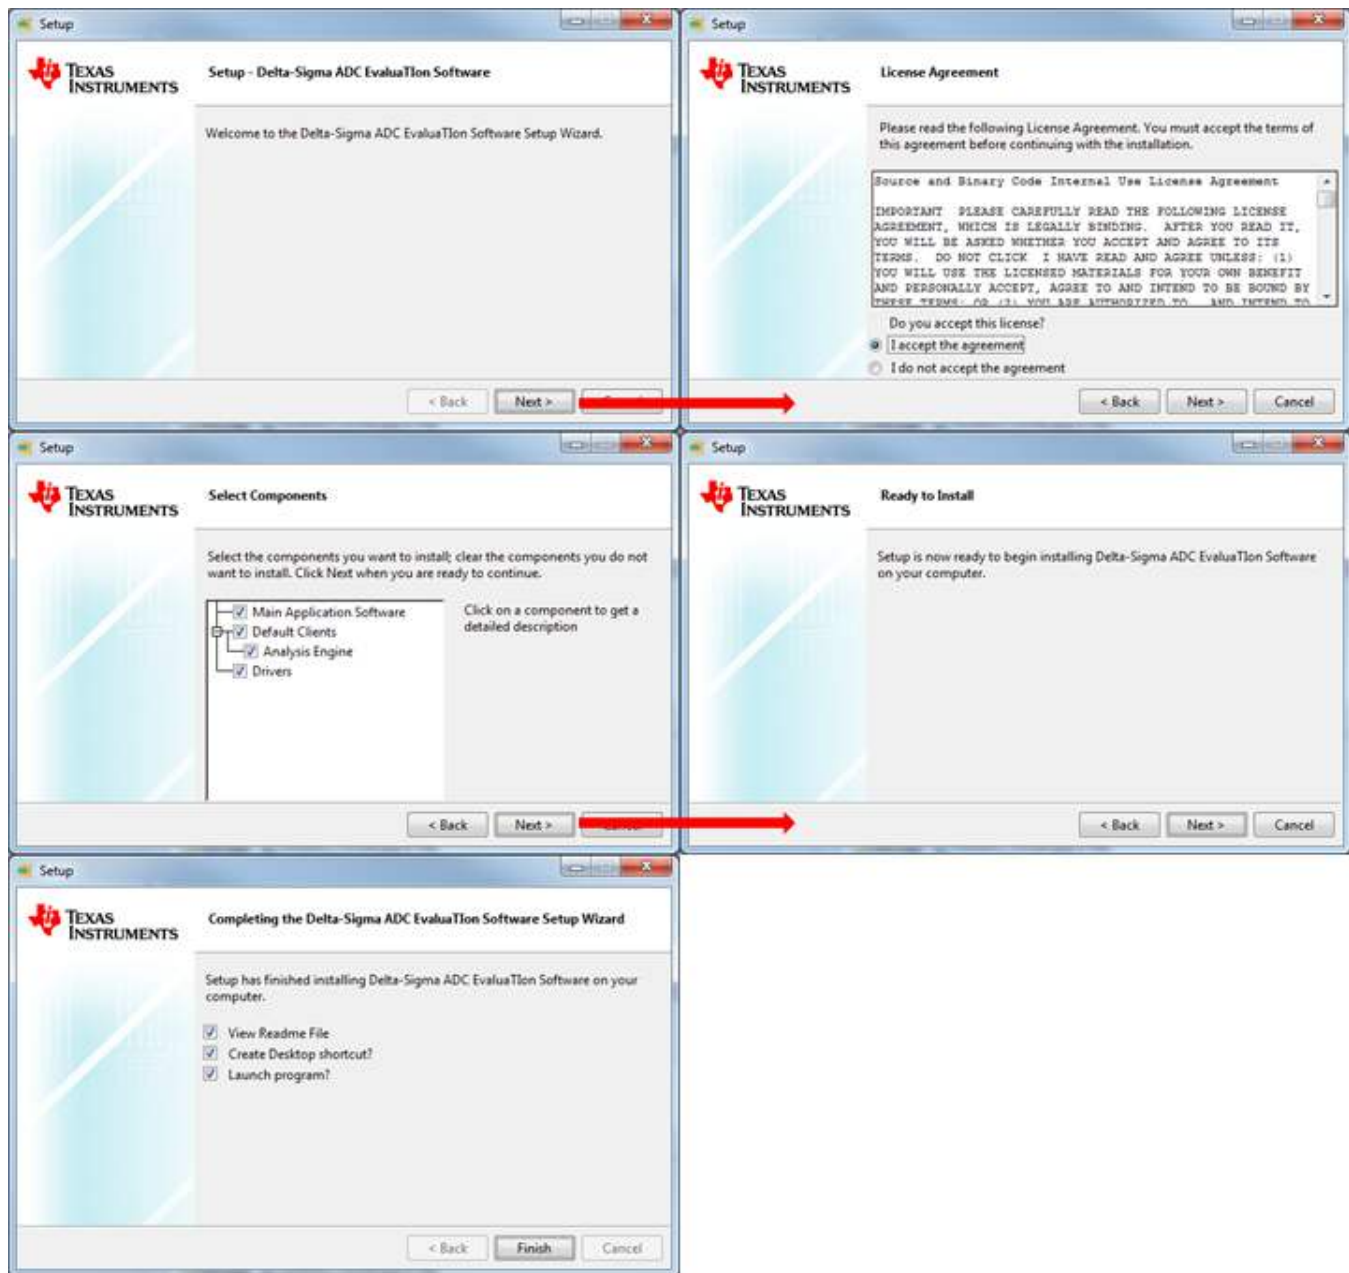

Figure 3. Delta-Sigma Evaluation Engine Installation Instructions

4.1.2 ADS1261 and ADS1235 EVM Device Package

Download the *ADS1261 Device Package* installer from the [ADS1261EVM tool page](#) for the ADS1261EVM (or the *ADS1235 Device Package* installer from the [ADS1235EVM tool page](#) for the ADS1235EVM) and save it to a known folder. Run the appropriate device package installer and follow the on-screen prompts. Note that future software versions may show slightly different screens.

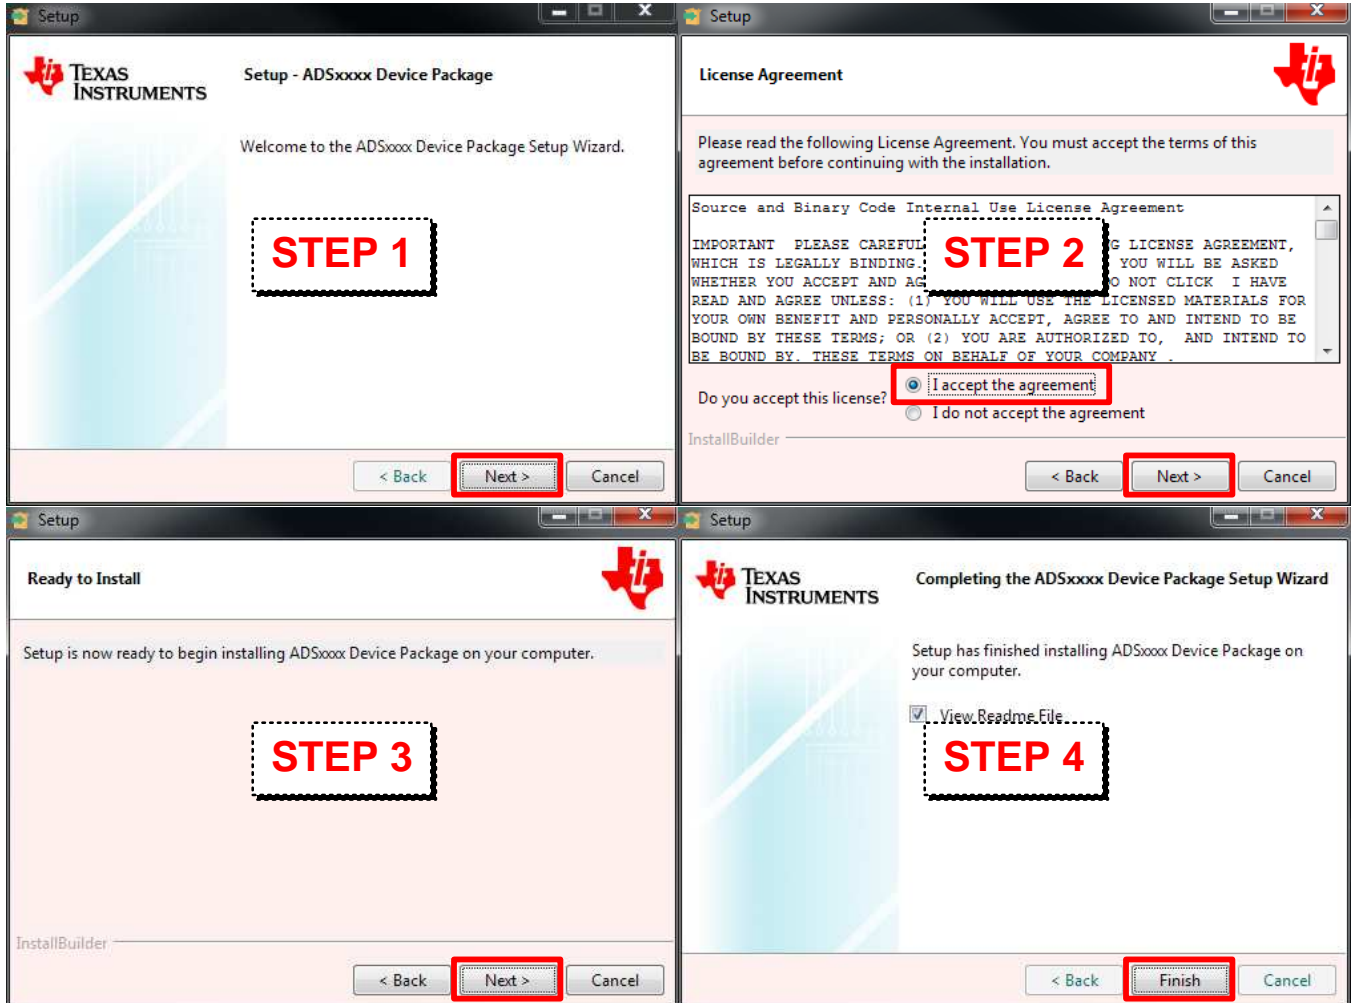

Figure 4. Device Package Installation Instructions

4.2 Connecting to the EVM Hardware

After the *Delta-Sigma ADC Evaluation Software* and the *ADS1261 Device Package* (or *ADS1235 Device Package*) are installed, connect the hardware with the provided USB micro cable, and start the *Delta-Sigma ADC Evaluation Software*. The GUI automatically detects the connected hardware and displays the device register map under the *Device* tab, as shown in [Figure 5](#) and [Figure 6](#).

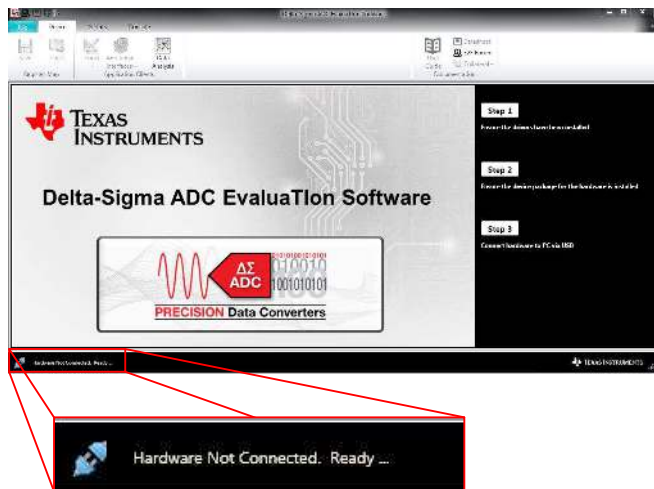

Figure 5. GUI View Before Connecting EVM Hardware

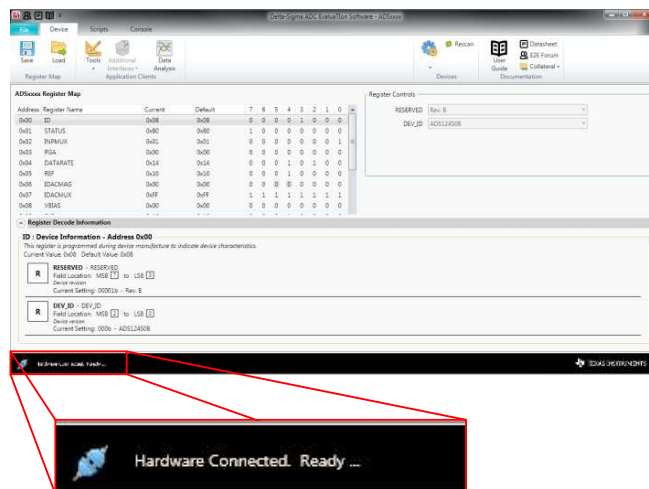

Figure 6. GUI View After Connecting EVM Hardware

4.3 Using the Software With the EVM

The *Delta-Sigma ADC Evaluation Software User Manual* provides an overview of the GUI, an explanation of how to modify device register settings, how to collect and analyze data, and control device operations with scripts. For a list of commands that are supported on the ADS1261 and ADS1235 EVM, see the [ADS1261 and ADS1235 EVM Commands](#) section.

4.3.1 ADS1261 and ADS1235 EVM Commands

A list of all the EVM commands are given in [Table 7](#). These commands are available for use within the *Scripts* and *Console* tabs of the Delta-Sigma ADC Evaluation software. All of these commands are implemented in the Tiva firmware; however, many of these commands only trigger SPI commands to the ADC, as defined in the device data sheet.

In general, most device commands that communicate with the ADC via SPI will require the /PWDN pin to be set high, prior to issuing the command. When the /PWDN pin is low, the device is in hardware power-down mode and all device functions are disabled (only the internal LDO remains powered). Returning the /PWDN pin high resumes normal ADC operations and preserves the registers settings.

The ADC may also be placed into a software power-down mode by setting the PWDN bit high, in the MODE3 register. In this mode the internal LDO, internal reference, and serial interface remain enabled. SPI commands can be sent while the device is in software power-down mode; however, these actions may or may not take effect in this mode.

Note that some of the commands shown in [Table 7](#) may wake the ADC prior to taking effect, particularly for EVM commands that are utilized by the GUI. Refer to the "Wakes Device?" column in [Table 7](#) to determine if a command implements this behavior.

Table 7. Firmware Commands

Command	Command Arguments	Description	Wakes Device?
GUI Commands			
ID		Returns EVM ID string: "<DEVICE> <DATE> <TIME>", where "<DEVICE>" is either "ADS1261" or "ADS1235", and "<DATE> <TIME>" indicates when the EVM firmware was compiled.	N
COMMANDLIST		Returns a list of all commands supported by the EVM firmware.	N
COLLECT	<# Samples>	Collects a number of ADC samples equal to "<# Samples>", where "<# Samples>" is an unsigned integer. During this operation, all other commands will be ignored and the BUSY LED will blink until all samples have been collected.	Y ⁽¹⁾
READSINGLE	<ADDRESS>	This command is used by the GUI. It provides the same function as RREG, but wakes the device from power down and returns to previous power-down mode after completion.	Y ⁽¹⁾
WRITESINGLE	<ADDRESS> <DATA>	This command is used by the GUI. It provides the same function as WREG, but wakes the device from power down and returns to previous power-down mode after completion.	Y ⁽¹⁾
REGMAP		This command is used by the GUI to read the values of all device registers.	Y ⁽¹⁾
ADC SPI Commands			
NOP		Issues the NOP device command to the ADC (via SPI).	N
RESET		Issues the RESET device command to the ADC (via SPI).	N ⁽²⁾
START		Sets the START pin low and issues the START device command to the ADC (via SPI).	N
STOP		Sets the START pin low and issues the STOP device command to the ADC (via SPI).	N
RDATA		Starts a single conversion, waits for /DRDY to go low, and prints the conversion result to the console.	N
SYOCAL		Issues the system-offset calibration device command to the ADC (via SPI).	N
SYGCAL		Issues the system-gain calibration device command to the ADC (via SPI).	N
SFOCAL		Issues the self-offset calibration device command to the ADC (via SPI).	N
RREG	<ADDRESS>	Issues a read register device command to the ADC (via SPI), where "<ADDRESS>" is the starting register address in hexadecimal (without the "0x" prefix or "h" postfix).	N
WREG	<ADDRESS> <DATA>	Issues a write register device command to the ADC (via SPI), where "<ADDRESS>" is the starting register address in hex, and "<DATA>" is the value to write to the register in hex (without the "0x" prefix or "h" postfix).	N
LOCK		Sends the lock register device command to the ADC (via SPI). While in this mode, all write register commands will be ignored until the device is unlocked.	N
UNLOCK		Sends the unlock register device command to the ADC (via SPI). This command unlocks the device register to allow write commands to take effect.	N
Hardware Control Commands			
HOLDCLOCK	<"0" or "1">	This command controls the Tiva pin connected to the ADC's "CLKIN" pin to hold it low (to use the ADC's internal oscillator) or to release control of CLKIN and allow for external clocks to be applied to J6. <ul style="list-style-type: none"> "HOLDCLOCK 1" enables the TIVA's GPIO output and pulls CLKIN low. "HOLDCLOCK 0" disables the GPIO output and reconfigures the TIVA GPIO pin to a high-impedance input. See Section 3.2.2 for additional hardware information.	N
HOLDPWDN	<"0" or "1">	This command controls the state of the /PWDN GPIO pin. An argument of "1" sets the /PWDN pin high, while a "0" argument sets the /PWDN pin low.	⁽³⁾
HWRESET		This command toggles the /RESET GPIO pin.	N ⁽²⁾
HOLDSTART	<"0" or "1">	This command controls the state of the START GPIO pin. An argument of "1" sets the START pin high, while a "0" argument sets the START pin low.	N
Additional Firmware Commands			
CLEAR		Clears the software fault flag, writes "0x00" to the STATS register (to clear the CRC_ERR and RESET bits), and turns off the FAULT LED. NOTE: Pressing S3 will perform the same action as the CLEAR command.	N
STATUS		Reads the STATUS register (to check for any new fault conditions) and prints (to the console) a description of each fault type that has occurred since last clearing the software fault flag (with S3 or the CLEAR command).	N
CRC	<LENGTH> <DATA1> <DATA2> <DATA3> <DATA4>	Computes the CRC-n of the data bytes given in "<DATA1>" through "<DATA4>", where "<LENGTH>" is the number of bytes to be used in the CRC-n calculation. If the number of data bytes provided is greater than "<LENGTH>", the extra data bytes will be ignored.	N
DONTCARE	<VALUE>	Sets the "Don't care" byte value that is used for all SPI commands that include a "Don't care" byte. Changing the value of this byte has the effect of modifying the resulting CRC byte that is used with CRC-mode.	N

⁽¹⁾ Returns device to previous state after completion.

⁽²⁾ Resetting will wake the device from software-power down mode.

⁽³⁾ Setting the /PWDN pin high exits hardware power-down mode; however, the previous software power-down mode remains unchanged.

Table 7. Firmware Commands (continued)

Command	Command Arguments	Description	Wakes Device?
SPISEND	<LENGTH> <BYTE1> <BYTE2> ... <BYTE N>	Sends a user-specified SPI command sequence to the ADC. /CS remains low until all bytes have been sent. After issuing this command the firmware will read the STATUS register to check for an CRC errors. This command allows for testing of the CRC command validation of the ADC, for example, since it allows the user to provide invalid CRC bytes with the various SPI commands.	N

5 EVM Bill of Materials, PCB Layouts, and Schematics

5.1 Bill of Materials

The bill of materials (BOM) quantities are shown for the ADS1261EVM. For BOM differences between the ADS1261EVM and ADS1235EVM, such as components not populated or substituted on the ADS1235EVM, a footnote is shown next to the affected component designator in [Table 8](#) to indicate the difference.

NOTE: EVM populated parts may be substituted with alternate components with similar characteristics. All components (listed or substituted) are compliant with the *European Union Restriction on Use of Hazardous Substances* (RoHS) directive. For more information about TI's position on RoHS compliance, see <http://www.ti.com/support-quality/quality-reliability.html>.

Table 8. EVM Bill of Materials

Designator	Qty	Value	Description	Package Reference	Part Number	Manufacturer
!PCB1	1		Printed Circuit Board		PA044	Any

U24	0		Single Output High PSRR LDO, 150 mA, Adjustable 1.2 to 33 V Output, 3 to 36 V Input, with Ultra-Low Noise, 8-pin MSOP (DGN), -40 to 125 degC, Green (RoHS & no Sb/Br)	DGN0008D	TPS7A4901DGNR	Texas Instruments
U25	0		Inverting Buck-Boost Adjustable Converter with 2.7 to 5.5 V Input and -15 to -2 V Output, -40 to 85 degC, 10-Pin SON (DRC), Green (RoHS & no Sb/Br)	DRC0010J	TPS63700DRCR	Texas Instruments
U26	0		Single Output High PSRR LDO, 200 mA, Adjustable -1.18 to -33 V Output, -3 to -36 V Input, with Ultra-Low Noise, 8-pin MSOP (DGN), -40 to 125 degC, Green (RoHS & no Sb/Br)	DGN0008D	TPS7A3001DGNR	Texas Instruments

5.2 PCB Layouts

Figure 7 through Figure 12 illustrate the PCB layout. The same PCB layout is used for both the ADS1261EVM and ADS1235EVM.

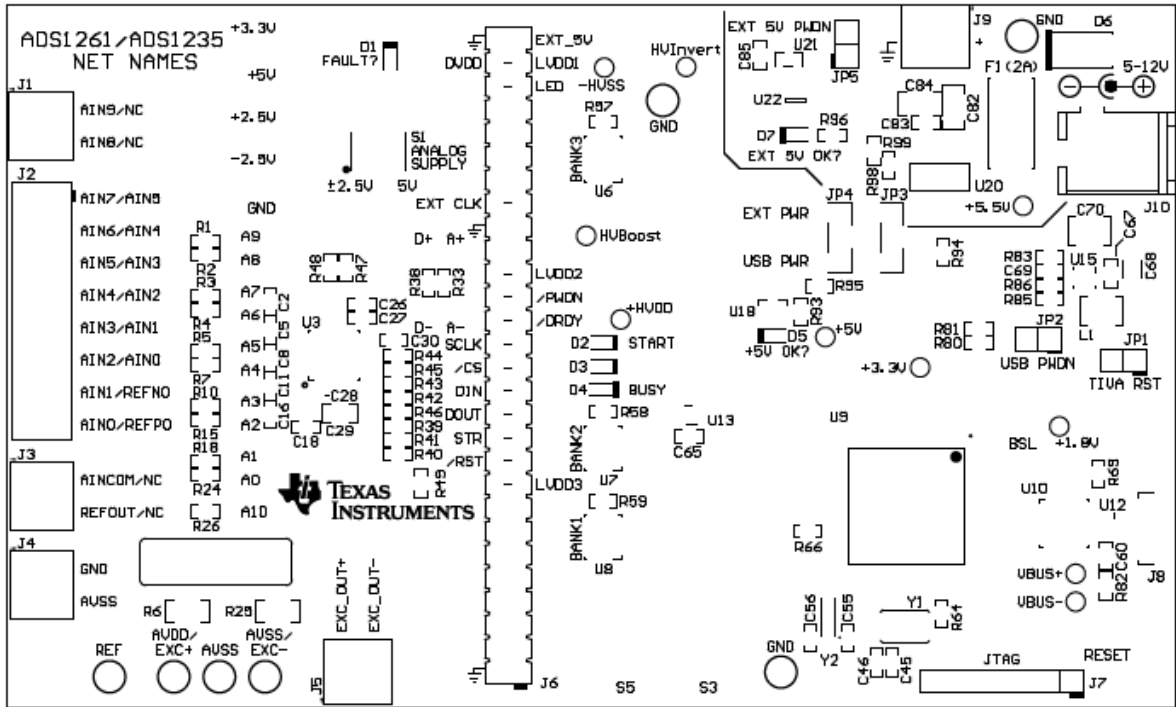

Figure 7. Top Silkscreen

Figure 8. Top Layer (Positive)

Figure 9. Ground Layer (Negative)

Figure 10. Power Layer (Negative)

Figure 11. Bottom Layer (Positive)

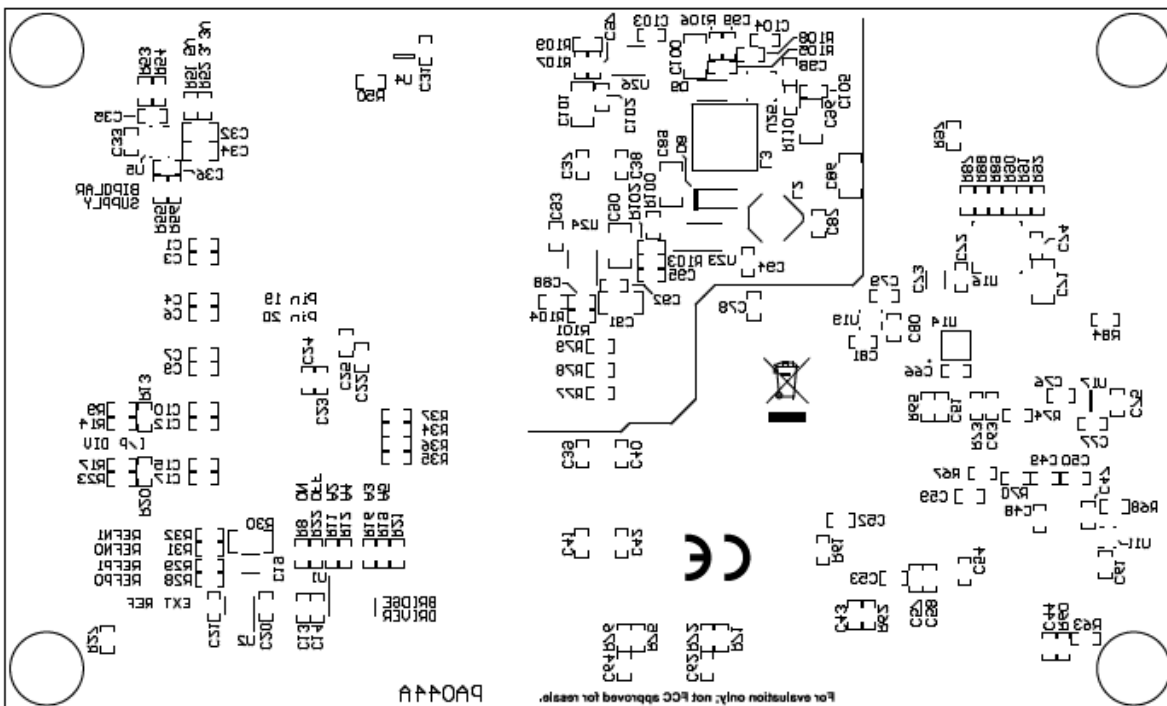

Figure 12. Bottom Silkscreen

5.3 Schematic

Figure 13 through Figure 20 show the schematics for the ADS1261EVM and ADS1235EVM. The schematic drawings show the ADS1261EVM populated components, as listed in Table 8.

Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Original (March 2018) to A Revision	Page
• Changed general overview of EVM for clarity	1
• Changed <i>Hardware Functionality</i> section	3
• Changed last bullet in <i>Software Functionality</i> section	3
• Added note to <i>Analog Supply Configuration of the ADC</i> section	5
• Changed <i>onboard digital supply</i> to <i>onboard supply</i> in <i>Digital Supply Configuration of the ADC</i> section	5
• Added first step and changed software names in steps 2 and 3 in <i>Software Installation and Hardware Connection Procedure</i> section	5
• Changed 2.55 V to 2.5 V in left position description of switch S1	6
• Added (default) to open position description of switches S2, S3, and S4	6
• Changed <i>FAULT indicator</i> to <i>FAULT LED indicator</i> in closed position description of switch S3	6
• Added (<i>ADS1261EVM Shown</i>) to title of <i>Input Terminal Blocks (ADS1261EVM Shown)</i> figure	7
• Added AVSS footnote to <i>Analog Input Terminal Blocks, J1–J4</i> table	8
• Changed <i>Digital Interface Header</i> section	9
• Added REF62xx to U2–1 (<i>REF</i>) row in <i>Useful Test Points</i> table	10
• Added <i>EVM Hardware</i> to title of <i>GUI View Before Connecting EVM Hardware</i> figure	13
• Added <i>Hardware</i> to title of <i>GUI View After Connecting EVM Hardware</i> figure	13
• Changed first sentence of <i>ADS1261 and ADS1235 EVM Commands</i> section	13
• Changed <i>Firmware Commands</i> table title and contents	14
• Deleted overview text from <i>EVM Bill of Materials, PCB Layouts, and Schematics</i> section	16
• Added overview text to <i>Bill of Materials</i> section, changed note	16
• Changed <i>Schematic</i> section text	24

STANDARD TERMS FOR EVALUATION MODULES

1. *Delivery:* TI delivers TI evaluation boards, kits, or modules, including any accompanying demonstration software, components, and/or documentation which may be provided together or separately (collectively, an "EVM" or "EVMs") to the User ("User") in accordance with the terms set forth herein. User's acceptance of the EVM is expressly subject to the following terms.
 - 1.1 EVMs are intended solely for product or software developers for use in a research and development setting to facilitate feasibility evaluation, experimentation, or scientific analysis of TI semiconductor products. EVMs have no direct function and are not finished products. EVMs shall not be directly or indirectly assembled as a part or subassembly in any finished product. For clarification, any software or software tools provided with the EVM ("Software") shall not be subject to the terms and conditions set forth herein but rather shall be subject to the applicable terms that accompany such Software
 - 1.2 EVMs are not intended for consumer or household use. EVMs may not be sold, sublicensed, leased, rented, loaned, assigned, or otherwise distributed for commercial purposes by Users, in whole or in part, or used in any finished product or production system.
2. *Limited Warranty and Related Remedies/Disclaimers:*
 - 2.1 These terms do not apply to Software. The warranty, if any, for Software is covered in the applicable Software License Agreement.
 - 2.2 TI warrants that the TI EVM will conform to TI's published specifications for ninety (90) days after the date TI delivers such EVM to User. Notwithstanding the foregoing, TI shall not be liable for a nonconforming EVM if (a) the nonconformity was caused by neglect, misuse or mistreatment by an entity other than TI, including improper installation or testing, or for any EVMs that have been altered or modified in any way by an entity other than TI, (b) the nonconformity resulted from User's design, specifications or instructions for such EVMs or improper system design, or (c) User has not paid on time. Testing and other quality control techniques are used to the extent TI deems necessary. TI does not test all parameters of each EVM. User's claims against TI under this Section 2 are void if User fails to notify TI of any apparent defects in the EVMs within ten (10) business days after delivery, or of any hidden defects with ten (10) business days after the defect has been detected.
 - 2.3 TI's sole liability shall be at its option to repair or replace EVMs that fail to conform to the warranty set forth above, or credit User's account for such EVM. TI's liability under this warranty shall be limited to EVMs that are returned during the warranty period to the address designated by TI and that are determined by TI not to conform to such warranty. If TI elects to repair or replace such EVM, TI shall have a reasonable time to repair such EVM or provide replacements. Repaired EVMs shall be warranted for the remainder of the original warranty period. Replaced EVMs shall be warranted for a new full ninety (90) day warranty period.
3. *Regulatory Notices:*
 - 3.1 *United States*
 - 3.1.1 *Notice applicable to EVMs not FCC-Approved:*

FCC NOTICE: This kit is designed to allow product developers to evaluate electronic components, circuitry, or software associated with the kit to determine whether to incorporate such items in a finished product and software developers to write software applications for use with the end product. This kit is not a finished product and when assembled may not be resold or otherwise marketed unless all required FCC equipment authorizations are first obtained. Operation is subject to the condition that this product not cause harmful interference to licensed radio stations and that this product accept harmful interference. Unless the assembled kit is designed to operate under part 15, part 18 or part 95 of this chapter, the operator of the kit must operate under the authority of an FCC license holder or must secure an experimental authorization under part 5 of this chapter.
 - 3.1.2 *For EVMs annotated as FCC – FEDERAL COMMUNICATIONS COMMISSION Part 15 Compliant:*

CAUTION

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC Interference Statement for Class A EVM devices

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC Interference Statement for Class B EVM devices

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

3.2 Canada

3.2.1 For EVMs issued with an Industry Canada Certificate of Conformance to RSS-210 or RSS-247

Concerning EVMs Including Radio Transmitters:

This device complies with Industry Canada license-exempt RSSs. Operation is subject to the following two conditions:

(1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Concernant les EVMs avec appareils radio:

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Concerning EVMs Including Detachable Antennas:

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication. This radio transmitter has been approved by Industry Canada to operate with the antenna types listed in the user guide with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Concernant les EVMs avec antennes détachables

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante. Le présent émetteur radio a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés dans le manuel d'usage et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

3.3 Japan

3.3.1 *Notice for EVMs delivered in Japan:* Please see http://www.tij.co.jp/lstds/ti_ja/general/eStore/notice_01.page 日本国内に輸入される評価用キット、ボードについては、次のところをご覧ください。
http://www.tij.co.jp/lstds/ti_ja/general/eStore/notice_01.page

3.3.2 *Notice for Users of EVMs Considered "Radio Frequency Products" in Japan:* EVMs entering Japan may not be certified by TI as conforming to Technical Regulations of Radio Law of Japan.

If User uses EVMs in Japan, not certified to Technical Regulations of Radio Law of Japan, User is required to follow the instructions set forth by Radio Law of Japan, which includes, but is not limited to, the instructions below with respect to EVMs (which for the avoidance of doubt are stated strictly for convenience and should be verified by User):

1. Use EVMs in a shielded room or any other test facility as defined in the notification #173 issued by Ministry of Internal Affairs and Communications on March 28, 2006, based on Sub-section 1.1 of Article 6 of the Ministry's Rule for Enforcement of Radio Law of Japan,
2. Use EVMs only after User obtains the license of Test Radio Station as provided in Radio Law of Japan with respect to EVMs, or
3. Use of EVMs only after User obtains the Technical Regulations Conformity Certification as provided in Radio Law of Japan with respect to EVMs. Also, do not transfer EVMs, unless User gives the same notice above to the transferee. Please note that if User does not follow the instructions above, User will be subject to penalties of Radio Law of Japan.

【無線電波を送信する製品の開発キットをお使いになる際の注意事項】 開発キットの中には技術基準適合証明を受けていないものがあります。技術適合証明を受けていないものご使用に際しては、電波法遵守のため、以下のいずれかの措置を取っていただく必要がありますのでご注意ください。

1. 電波法施行規則第6条第1項第1号に基づく平成18年3月28日総務省告示第173号で定められた電波暗室等の試験設備でご使用いただく。
2. 実験局の免許を取得後ご使用いただく。
3. 技術基準適合証明を取得後ご使用いただく。

なお、本製品は、上記の「ご使用にあたっての注意」を譲渡先、移転先に通知しない限り、譲渡、移転できないものとします。

上記を遵守頂けない場合は、電波法の罰則が適用される可能性があることをご留意ください。日本テキサス・インスツルメンツ株式会社

東京都新宿区西新宿 6 丁目 2 4 番 1 号
西新宿三井ビル

3.3.3 *Notice for EVMs for Power Line Communication:* Please see http://www.tij.co.jp/llds/ti_ja/general/eStore/notice_02.page
電力線搬送波通信についての開発キットをお使いになる際の注意事項については、次のところをご覧ください。 http://www.tij.co.jp/llds/ti_ja/general/eStore/notice_02.page

3.4 *European Union*

3.4.1 *For EVMs subject to EU Directive 2014/30/EU (Electromagnetic Compatibility Directive):*

This is a class A product intended for use in environments other than domestic environments that are connected to a low-voltage power-supply network that supplies buildings used for domestic purposes. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

4 *EVM Use Restrictions and Warnings:*

4.1 EVMS ARE NOT FOR USE IN FUNCTIONAL SAFETY AND/OR SAFETY CRITICAL EVALUATIONS, INCLUDING BUT NOT LIMITED TO EVALUATIONS OF LIFE SUPPORT APPLICATIONS.

4.2 User must read and apply the user guide and other available documentation provided by TI regarding the EVM prior to handling or using the EVM, including without limitation any warning or restriction notices. The notices contain important safety information related to, for example, temperatures and voltages.

4.3 *Safety-Related Warnings and Restrictions:*

4.3.1 User shall operate the EVM within TI's recommended specifications and environmental considerations stated in the user guide, other available documentation provided by TI, and any other applicable requirements and employ reasonable and customary safeguards. Exceeding the specified performance ratings and specifications (including but not limited to input and output voltage, current, power, and environmental ranges) for the EVM may cause personal injury or death, or property damage. If there are questions concerning performance ratings and specifications, User should contact a TI field representative prior to connecting interface electronics including input power and intended loads. Any loads applied outside of the specified output range may also result in unintended and/or inaccurate operation and/or possible permanent damage to the EVM and/or interface electronics. Please consult the EVM user guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative. During normal operation, even with the inputs and outputs kept within the specified allowable ranges, some circuit components may have elevated case temperatures. These components include but are not limited to linear regulators, switching transistors, pass transistors, current sense resistors, and heat sinks, which can be identified using the information in the associated documentation. When working with the EVM, please be aware that the EVM may become very warm.

4.3.2 EVMs are intended solely for use by technically qualified, professional electronics experts who are familiar with the dangers and application risks associated with handling electrical mechanical components, systems, and subsystems. User assumes all responsibility and liability for proper and safe handling and use of the EVM by User or its employees, affiliates, contractors or designees. User assumes all responsibility and liability to ensure that any interfaces (electronic and/or mechanical) between the EVM and any human body are designed with suitable isolation and means to safely limit accessible leakage currents to minimize the risk of electrical shock hazard. User assumes all responsibility and liability for any improper or unsafe handling or use of the EVM by User or its employees, affiliates, contractors or designees.

4.4 User assumes all responsibility and liability to determine whether the EVM is subject to any applicable international, federal, state, or local laws and regulations related to User's handling and use of the EVM and, if applicable, User assumes all responsibility and liability for compliance in all respects with such laws and regulations. User assumes all responsibility and liability for proper disposal and recycling of the EVM consistent with all applicable international, federal, state, and local requirements.

5. *Accuracy of Information:* To the extent TI provides information on the availability and function of EVMs, TI attempts to be as accurate as possible. However, TI does not warrant the accuracy of EVM descriptions, EVM availability or other information on its websites as accurate, complete, reliable, current, or error-free.

6. *Disclaimers:*
- 6.1 EXCEPT AS SET FORTH ABOVE, EVMS AND ANY MATERIALS PROVIDED WITH THE EVM (INCLUDING, BUT NOT LIMITED TO, REFERENCE DESIGNS AND THE DESIGN OF THE EVM ITSELF) ARE PROVIDED "AS IS" AND "WITH ALL FAULTS." TI DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, REGARDING SUCH ITEMS, INCLUDING BUT NOT LIMITED TO ANY EPIDEMIC FAILURE WARRANTY OR IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF ANY THIRD PARTY PATENTS, COPYRIGHTS, TRADE SECRETS OR OTHER INTELLECTUAL PROPERTY RIGHTS.
- 6.2 EXCEPT FOR THE LIMITED RIGHT TO USE THE EVM SET FORTH HEREIN, NOTHING IN THESE TERMS SHALL BE CONSTRUED AS GRANTING OR CONFERRING ANY RIGHTS BY LICENSE, PATENT, OR ANY OTHER INDUSTRIAL OR INTELLECTUAL PROPERTY RIGHT OF TI, ITS SUPPLIERS/LICENSORS OR ANY OTHER THIRD PARTY, TO USE THE EVM IN ANY FINISHED END-USER OR READY-TO-USE FINAL PRODUCT, OR FOR ANY INVENTION, DISCOVERY OR IMPROVEMENT, REGARDLESS OF WHEN MADE, CONCEIVED OR ACQUIRED.
7. *USER'S INDEMNITY OBLIGATIONS AND REPRESENTATIONS.* USER WILL DEFEND, INDEMNIFY AND HOLD TI, ITS LICENSORS AND THEIR REPRESENTATIVES HARMLESS FROM AND AGAINST ANY AND ALL CLAIMS, DAMAGES, LOSSES, EXPENSES, COSTS AND LIABILITIES (COLLECTIVELY, "CLAIMS") ARISING OUT OF OR IN CONNECTION WITH ANY HANDLING OR USE OF THE EVM THAT IS NOT IN ACCORDANCE WITH THESE TERMS. THIS OBLIGATION SHALL APPLY WHETHER CLAIMS ARISE UNDER STATUTE, REGULATION, OR THE LAW OF TORT, CONTRACT OR ANY OTHER LEGAL THEORY, AND EVEN IF THE EVM FAILS TO PERFORM AS DESCRIBED OR EXPECTED.
8. *Limitations on Damages and Liability:*
- 8.1 *General Limitations.* IN NO EVENT SHALL TI BE LIABLE FOR ANY SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF THESE TERMS OR THE USE OF THE EVMS , REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. EXCLUDED DAMAGES INCLUDE, BUT ARE NOT LIMITED TO, COST OF REMOVAL OR REINSTALLATION, ANCILLARY COSTS TO THE PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES, RETESTING, OUTSIDE COMPUTER TIME, LABOR COSTS, LOSS OF GOODWILL, LOSS OF PROFITS, LOSS OF SAVINGS, LOSS OF USE, LOSS OF DATA, OR BUSINESS INTERRUPTION. NO CLAIM, SUIT OR ACTION SHALL BE BROUGHT AGAINST TI MORE THAN TWELVE (12) MONTHS AFTER THE EVENT THAT GAVE RISE TO THE CAUSE OF ACTION HAS OCCURRED.
- 8.2 *Specific Limitations.* IN NO EVENT SHALL TI'S AGGREGATE LIABILITY FROM ANY USE OF AN EVM PROVIDED HEREUNDER, INCLUDING FROM ANY WARRANTY, INDEMNITY OR OTHER OBLIGATION ARISING OUT OF OR IN CONNECTION WITH THESE TERMS, , EXCEED THE TOTAL AMOUNT PAID TO TI BY USER FOR THE PARTICULAR EVM(S) AT ISSUE DURING THE PRIOR TWELVE (12) MONTHS WITH RESPECT TO WHICH LOSSES OR DAMAGES ARE CLAIMED. THE EXISTENCE OF MORE THAN ONE CLAIM SHALL NOT ENLARGE OR EXTEND THIS LIMIT.
9. *Return Policy.* Except as otherwise provided, TI does not offer any refunds, returns, or exchanges. Furthermore, no return of EVM(s) will be accepted if the package has been opened and no return of the EVM(s) will be accepted if they are damaged or otherwise not in a resalable condition. If User feels it has been incorrectly charged for the EVM(s) it ordered or that delivery violates the applicable order, User should contact TI. All refunds will be made in full within thirty (30) working days from the return of the components(s), excluding any postage or packaging costs.
10. *Governing Law:* These terms and conditions shall be governed by and interpreted in accordance with the laws of the State of Texas, without reference to conflict-of-laws principles. User agrees that non-exclusive jurisdiction for any dispute arising out of or relating to these terms and conditions lies within courts located in the State of Texas and consents to venue in Dallas County, Texas. Notwithstanding the foregoing, any judgment may be enforced in any United States or foreign court, and TI may seek injunctive relief in any United States or foreign court.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale (www.ti.com/legal/termsofsale.html) or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.
