Above-mentioned graph shows the maximum permission voltage when using a capacitor at the AC sine wave voltage. As for this voltage, when measuring in room temperature (25 °C), the capacitor self generation of heat shows the voltage which becomes a maximum of 20 °C.

When using at the pulse voltage or AC voltage except the sine wave, Use on confirming that the capacitor self generation of heat temperature is less than 20 °C in room temperature (ambient temperature is 25 °C)

The self generation of heat temperature (the difference between the surface temperature and the ambient temperature of capacitor) changes according to ambient temperature.

As for the permission self generation of heat temperature when the ambient temperature is more than 25 °C, refer to the figure of the next page.
