

### Key Features

<b>EPIC® Seal</b>	Ceramic to metal braze. Gas filled hermetic chamber protects key components. Exceeds IP69K standard
<b>Contacts / Form</b>	Silver / SPST / NO
<b>Coil</b>	Efficient two coil design with no PWM or EMI emissions.
<b>Suppression</b>	Coil suppression built in
<b>High Shock and Vibration</b>	For rugged environments, off-road and tracked vehicles
<b>Installation</b>	Not direction sensitive
<b>Reference</b>	MIL-R-6106, RoHS

NOTES:

1. Operation: Contactor is energized by applying power to Coil+ and Coil-(GND). The current sensing circuit is isolated from the coil and requires power at Sense Vin and Sense Gnd. There are two Sense Vout pins, each with a different 0 amp voltage and range. They both indicate the current through the main contacts (A2 & A1).

Pin 5:  
0 to 5V  
Sense Vout = I/240 + 2.5

Pin 6:  
0 to 10V  
Sense Vout = I/120 + 5.0

2. Contactor has two coils. Both are used for pull-in. After approximately 75 milliseconds, one coil is electronically removed from the coil drive circuit. The remaining coil supplies low continuous hold power sufficient for the contactor to meet all of its specified performance specifications. This provides the lowest coil power possible without the use of PWM electronics that have been known to cause EMI emissions and/or crosstalk on system control power.
