Description

This Cypress series of network circuits is produced using advanced 0.35 micron CMOS technology, achieving the industry's fastest logic.

The Cypress CY2DP818-2 fanout buffer features a single LVDS or a single-ended LVTTL compatible input and eight LVPECL output pairs.

Designed for data communications clock management applications, the large fanout from a single input reduces loading on the input clock.

The CY2DP818-2 is ideal for both level translations from single-ended to LVPECL and for the distribution of LVPECL based clock signals.

The Cypress CY2DP818-2 has configurable input functions. The input is user configurable through the Inconfig pin for single ended or differential input.
