

Programmable controller **Twido**

Catalog
January

05

n New

New, extended functions are offered with Twido programmable controllers versions ≥ 3.0 and with version 3.0 of TwidoSoft software:

n Incorporation of the new CANopen bus master module **TWD NCO1M** in the Twido programmable controller range allows the Twido master to manage up to 16 slaves (motor starters, variable speed drives, etc.) connected to the CANopen bus.

n Connection to the Ethernet network:

- an integrated RJ45 port (Modbus TCP protocol) is available on the new 40 I/O Twido compact base controller **TWD LCAE 40DRF**,

- a new TwidoPort **499 TWD 01100** interface module also allows all Twido programmable controllers, versions ≥ 3.0 , to be connected to Ethernet via one of the serial ports on the controller.

n A new gateway **VW3 A8114**, using Bluetooth technology, allows wireless communication between a programming PC or a Pocket PC and a Twido compact or modular programmable controller.

n Four new analog I/O expansion modules **TWD AMI 4LT/8HT**, **TWD ARI 8HT** and **TWD AVO 2HT** have been added to the Twido programmable controller range.

n A new system of macros for managing the slaves connected on a Modbus network or a CANopen bus allows easier programming of applications with TwidoSoft software version 3.0, by simplifying writing of the program and improving comprehension of the code.

n The new TwidoAdjust software package **TWD SMD 100● V30M** is a software tool dedicated to the management and animation of Twido applications, using a Pocket PC.

Applications		Compact base controllers			
					
Discrete I/O	Basic	10	16	24	40
	Number of inputs	6 sink/source --- 24 V inputs (1)	9 sink/source --- 24 V inputs (1)	14 sink/source --- 24 V inputs (1)	24 sink/source --- 24 V inputs (1)
	Number of outputs	4 relay outputs	7 relay outputs	10 relay outputs	14 relay outputs 2 source transistor outputs
	Type of connection	Non-removable screw terminal block			
I/O expansion	Number of expansion modules			4 discrete, analog and AS-Interface I/O modules (2)	7 discrete, analog and AS-Interface I/O modules (2)
	Discrete I/O modules	8, 16 or 32 --- 24 V inputs; 8, 16 or 32 --- 24 V or relay outputs;			
	Analog I/O modules	2 x 12 bit inputs; 1 x 12 bit output or 2 inputs/1 x 12 bit output,			
	AS-Interface (3)	Management of slave modules: Discrete (max. 62 modules),			
Maximum number of I/O per configuration (base controller with I/O expansion modules)		10	16	88 with screw terminal I/O expansion modules (4) 152 with HE 10 connector I/O expansion modules	152 with screw terminal I/O expansion modules 264 with HE 10 connector I/O expansion modules
	Integrated counting and positioning	3 x 16 bit counting channels (5) 1 x 16 bit counting channel (32 bits for versions ≥ 2.5): - dedicated --- 24 V discrete inputs for incremental encoder or proximity sensors - up/down counting, up counter, down counter and frequency meter			4 x 16 bit counting channels (5) 2 x 16 bit channels (32 bits for versions ≥ 2.5): 2 channels: PWM function
Functions	PID	For controller versions ≥ 2.0			
	Event processing	For controller versions ≥ 2.0			
Communication	Integrated	1 RS 485 serial port (mini-DIN connector)	1 RS 485 serial port (mini-DIN connector), 1 optional serial port: RS 232C (mini-DIN connector) or RS 485 (mini-DIN connector or screw terminals) + RJ45 Ethernet port for TWD LCAE 40DRF With CANopen bus master module TWD NCO1M		
	CANopen bus Ethernet	With TwidoPort Ethernet network interface module 499 TWD 01100 for all controller versions ≥ 3.0			
Supply voltage		~ 100...240 V for TWD LCAA ●●● and TWD LCA● 40DRF (--- 24 V discrete sensors powered by the base controller), --- 19.2...30 V for TWD LCDA ●●●			
Programming	Application memory	700 instructions	2000 instructions	3000 instructions	3000 instructions, 6000 with memory extension cartridge TWD XCP MFK64
	Internal bits	128 bits	128 bits	256 bits	
	Internal words (6)	3000			
	Standard function blocks (6)	64 timers, 128 counters		128 timers, 128 counters	
	Double words	Yes			
	Floating, Trigonometrically				
	Real-time clock	Optional TWD XCP RTC real time clock cartridge, using 16 real-time clock blocks			Yes
	Real-time clock	Optional TWD XCP RTC real time clock cartridge, using 16 real-time clock blocks			Built-in
	Languages	Reversible languages: Ladder language and Instruction List language (with Grafcet instructions)			
	Software	TwidoSoft running under Windows 98 SE, Windows 2000 and Windows XP and TwidoAdjust running under Pocket PC2003			
Twido base controller models	TWD LC●A 10DRF	TWD LC●A 16DRF	TWD LC●A 24DRF	TWD LCA● 40DRF	
Page	10				

(1) Sink input: positive logic. Source input: negative logic.

(2) Within the consumption limit controlled by TwidoSoft software.

(3) The AS-Interface M3 profile supports analog profile 7.3 (7 slaves), but does not support analog profile S-7.4.

Modular base controllers

20	40
12 sink/source --- 24 V inputs (1)	24 sink/source --- 24 V inputs (1)
8 sink or source transistor outputs (depending on model) By HE10 type connector For TWD LMDA 20DTK , allows use of the Telefast pre-wired system	6 relay outputs and 2 transistor source outputs By removable screw terminal block
4 discrete, analog and AS-Interface I/O modules (2)	7 discrete, analog and AS-Interface I/O modules (2)
4 --- 24 V inputs/4 relay outputs or 16 --- 24 V inputs/8 relay outputs, connection by screw or spring terminals and by HE 10 type connector	
connection by screw terminals, 8 x 10 bit inputs, 4 x 12 bit inputs, 2 x 10 bit outputs	
analog (max. 7 modules). For all controller versions ≥ 2.0	
84 with screw terminal I/O expansion modules 148 with HE 10 connector I/O expansion modules	132 with screw terminal I/O expansion modules 244 with HE 10 connector I/O expansion modules
152 with screw terminal I/O expansion modules 264 with HE 10 connector I/O expansion modules	
2 x 16 bit counting channels (5)	
- dedicated --- 24 V discrete inputs for incremental encoders or proximity sensors - up/down counting, up counter, down counter, frequency meter	
(pulse width modulation output) and PLS function (pulse generator output)	
For all controller versions ≥ 2.0	
For all controller versions ≥ 2.0	
for controller versions ≥ 3.0	
--- 24 V supply	
3000 instructions	3000 instructions, 6000 with memory extension cartridge TWD XCP MFK64
Yes	
Optional TWD XCP RTC real time clock cartridge, using 16 real-time clock blocks

Presentation

The Twido range of compact programmable controllers offers an “all-in-one” solution in a compact overall size 3.1/6.18 x 3.54 x 2.75” (80/157 x 90 x 70 mm). Eight compact base controllers are available, differing in their processing capacity and in their number of \sim 24 V inputs and number of relay and transistor outputs (10, 16, 24 and 40 I/O).

These base controllers use:

- an a.c. supply between \sim 100 and 240 V (providing the \sim 24 V supply to the sensors)
- or a d.c. supply, between \sim 19.2 and 30 V (an external auxiliary supply must be provided for supply to the sensors)

This type of compact base controller offers the following advantages:

- A significant number of I/O (up to 40 I/O) in a small overall size, so reducing the size of consoles or panels for applications where space is an important factor.
- A variety of expansion options and product options offer the user a degree of flexibility which is generally only available with larger automation platforms. 24 I/O compact base controllers TWD LC●A 24DRF can take up to 4 discrete and/or analog I/O expansion modules, corresponding to a 64 I/O configuration; 40 I/O compact base controllers TWD LCA● 40DRF can take up to 7 modules. All compact base controllers can take optional modules such as a digital display, memory cartridge and real-time clock cartridge, as well as an additional RS 485 or RS 232C communication port (extra port not compatible with base controllers TWD LC●A 10DRF). The compact controller solution also allows great wiring flexibility. For discrete I/O expansion modules (with base controllers TWD LC●A 24DRF and TWD LCA● 40DRF) several possible types of connection are offered, such as removable screw terminal blocks and spring type connections which allow simple, fast and safe wiring. The Telefast pre-wired system allows the connection of modules with HE 10 connectors:
 - to pre-formed cables with free wires at one end for direct connection to sensors/pre-actuators
 - to the Telefast pre-wired system for Twido (connection cable and Telefast sub-base assembly).
- The display and plug-in memory options allow easy adjustment, transfer and backup of applications:
 - the digital display can be used as a local display and adjustment tool
 - the EEPROM technology in the memory cartridges allows backup and transfer of programs to any Twido compact or modular controller
- TwidoSoft software allows easy programming using instruction list language instructions or ladder language graphic objects. It uses the same objects and sets of instructions as those used by PL7-07 software for Nano programmable controllers. TwidoSoft software allows existing Nano PLC applications to be reused with Twido controllers by importing an ASCII file.
- Compact controllers have 2 analog adjustment points (only one for 10 and 16 I/O base controllers) accessible on the front panel.

Compact base controller	\sim 24 V inputs	Outputs relay	Analog adjustment	Serial ports	I/O expansion	Display module	Optional cartridge
TWD LC●A 10DRF	6	4	1 point 0...1023	1 x RS 485	No	Yes	1 slot: real-time clock or memory
TWD LC●A 16DRF	9	7	1 point 0...1023	1 x RS 485, option 1 x RS 232C/485	No	Yes	1 slot: real-time clock or memory
TWD LC●A 24DRF	14	10	1 point 0...1023 1 point 0...511	1 x RS 485, option 1 x RS 232C/485	Yes, 4 max (1)	Yes	1 slot: real-time clock or memory
TWD LCA● 40DRF	24	14 + 2 source transistor outputs	1 point 0...1023 1 point 0...511	1 x RS 485, option 1 x RS 232C/485	Yes, 7 max (2)	Yes	1 memory slot (3)

(1) i.e.: a maximum of 88 I/O with screw terminal expansion modules, with a maximum of 32 relay outputs in I/O expansion modules.

Maximum of 152 I/O with HE 10 connector expansion modules.

(2) i.e. a maximum of 152 I/O with screw terminal expansion modules. Maximum of 264 I/O with HE 10 connector expansion modules.

(3) Built-in real-time clock.

Description

Twido **TWD LC●A ●●DRF** and **TWD LCA● 40DRF** compact programmable base controllers comprise :

- 1 Two hinged connection terminal block covers for access to the terminals
- 2 A hinged access door
- 3 A mini-DIN type RS 485 serial port connector (allowing connection of the programming terminal)
- 4 A slot (protected by a removable cover) for digital diagnostic/maintenance display module TWD XCP ODC
- 5 A screw terminal block for --- 24 V supply to the sensors and for connection of the input sensors
- 6 A connector for I/O expansion modules TWD D●●, TWD A●● and TWD NOI 10M3 (maximum of 4 modules on 24 I/O base controllers and 7 modules on 40 I/O base controllers)
- 7 A display block showing:
 - the status of the controller (PWR, RUN, ERR and STAT)
 - the inputs and outputs (IN● and OUT●)
- 8 A screw terminal block for connection of the output pre-actuators
- 9 Two analog adjustment points (one point for 10 and 16 I/O models)
- 10 An extension connector for the addition of a 2nd RS 232C/RS 485 serial port using adapter TWD NAC ●●● (for 16 and 24 I/O models)
- 11 A screw terminal block for connection of the \sim 100...240 V mains or --- 19.2...30 V power supply
- 12 A connector (access through the bottom of the controller) for:
 - memory cartridge TWD XCP MFK32 or real-time clock cartridge TWD XCP RTC for base controllers TWD LC●A ●●DRF
 - memory cartridge TWD XCP MFK64 and built-in real-time clock TWD XCP RTC for base controllers TWD LCA● 40DRF
- 13 An RJ45 connector (access through the bottom of the controller) for connection to the Ethernet network, only on base controller TWD LCAE 40DRF

Compact base controllers are mounted on a symmetrical \sqcap rail. Mounting kit TWD XMT5 (supplied in lots of 5) allows plate or panel mounting (2 x \varnothing 4.3 holes).

Characteristics of compact base controllers

Temperature		°C	Operation: 0...+ 55. Storage: - 25...+ 70			
Relative humidity			30 to 95%, without condensation			
Degree of protection			IP 20			
Altitude	Operation	m	0...2000			
	Storage	m	0...3000			
Vibration resistance	Mounted on T rail	Hz	10...57, amplitude 0.075 mm, acceleration 57...150 Hz			
		m/s ²	9.8 (1 gn)			
	Plate or panel mounted (using mounting kit TWD XMT5)	Hz	2...25, amplitude 1.6 mm, acceleration 25...100 Hz			
		m/s ²	39.2 (4 gn)			
Shock resistance		m/s ²	147 (15 gn) for 11 ms			
Backup battery	Data backed up		Internal RAM: internal variables, internal bits and words, timers, counters, shift registers...			
	Operating time	days	Approximately 30 at 25 °C with fully charged battery			
	Battery type		Lithium battery, not interchangeable Optional external battery for TWD LCA● 40DRF			
	Charging time	h	Approximately 15 to charge from 0...90% of the full charge			
	Life		10 years and 3 years with external battery for TWD LCA● 40DRF			
Base controller type			TWD LC●A 10DRF	TWD LC●A 16DRF	TWD LC●A 24DRF	TWD LCA● 40DRF
Number of ≐ 24 V inputs			6	9	14	24
Number and type of outputs			4 relay	7 relay	10 relay	14 relay + 2 transistor
Connection of I/O			Non-removable screw terminal block			
I/O expansion modules	Max. no. of modules		-		4	7
	Max. no. of I/O		-		88/152 (1)	152/264 (1)
	AS-Interface		-		Management of slave modules: 62 (discrete), 7 (analog)	
Application memory capacity			700 instructions	2000 instructions	3000 instructions	3000 and 6000 instructions with memory extension
Cycle time	Processing time	ms	1 for 1000 logic instructions			
	System overhead	ms	0.5			
Data memory	Internal bits		128		256	
	Internal words (2)		3000			
	Timers (2)		64		128	
	Counters (2)		128			
	Double words		-		Yes	
	Floating, trigonometrically		-		Yes	
Supply	Nominal voltage	V	~ 100...240 (for TWD LCAA), ≐ 24 (for TWD LCDA)			
	Voltage range ~ 100...240 V	V	~ 85...264			
	Voltage range ≐ 24 V	V	≐ 19.2...30			
	Maximum inrush current	A	35		40	45
	≐ 24 V sensor supply	mA	250			
Maximum power required	~ 100 V	VA	20	22	33 (base with 4 I/O expansion modules)	77
	~ 264 V	VA	30	31	40 (base with 4 I/O expansion modules)	110
Communication						
Function			Built-in serial link		Optional serial interface adapter (3)	
Port type			RS 485		RS 232C, with adapter TWD NAC 232D RS 485, with adapter TWD NAC 485●	
Maximum data rate		K bits/s	38.4			
Isolation between internal circuit and serial port			Non isolated			
Programming terminal connection			Half-duplex terminal port		No	
Communication protocols			Modbus Master/Slave RTU. ASCII character mode			
"Remote Link" I/O			Yes, see page 45			
Integrated functions						
Counter	Number of channels		4 and 6 for TWD LCA● 40DRF			
	Frequency		3 channels at 5 kHz (function FCi), 1 channel at 20 kHz (function VFCi) 4 channels at 5 kHz (function FCi), 2 channels at 20 kHz (function VFCi) for TWD LCA● 40DRF			
	Capacity		16 bits FC, 32 bits VFCi for versions ≥ 2.5			
Positioning (for base controllers TWD LCA● 40DRF)	Number of channels		2			
	Frequency	kHz	7			
	Functions		PWM, pulse width modulation output; PLS, pulse generator output			
PID	24 I/O and 40 I/O base controllers		For controller versions ≥ 2.0			
Event processing	24 I/O and 40 I/O base controllers		For controller versions ≥ 2.0			
Analog adjustment points	10 I/O and 16 I/O base controllers		1 point adjustable from 0...1023 points			
	24 I/O and 40 I/O base controllers		1 point adjustable from 0...1023 points + 1 point adjustable from 0...511 points			

(1) The first value corresponds to the maximum number of I/O (base controller and expansion module) with screw or spring terminal expansion modules, the second value is for HE 10 connector expansion modules.

(2) The maximum values cannot be cumulated.

(3) With 16 I/O base controllers TWD LC●A 16DRF and 24 I/O base controllers TWD LC●A 24DRF.

(2) Base controller equipped with an integrated Ethernet link (RJ45 port).

(3) Other separate components, see page 46

(4) Connection via built-in port or via optional serial port on Twido programmable controllers.

(5) Without ground fault detection.

Dimensions

TWD LC●A 10DRF/16DRF/24DRF and TWD LCA● 40DRF

Installation rules

	a
TWD LC●A 10DRF	3.14" (80 mm)
TWD LC●A 16DRF	3.14" (80 mm)
TWD LC●A 24DRF	3.74" (95 mm)
TWD LCA● 40DRF	6.18" (157 mm)

Important:

- Vertical mounting: not permissible for temperatures $\geq 40^\circ\text{C}$, "upside down" flat mounting not permissible.
- Avoid placing devices which generate heat (transformers, power supplies, power contactors...) beneath the controller.

Connections

Connection of $\sim 24\text{ V}$ inputs

TWD LC●A 10DRF/16DRF/24DRF

Connection to sink inputs (positive logic) with sensors powered by the base controller

Connection to source inputs (negative logic) with sensors powered by the base controller

TWD LC●A 24DRF

Connection to sink inputs (positive logic) with sensors powered by the base controller

Connection to source inputs (negative logic) with sensors powered by the base controller

Connection of $\sim 100...240\text{ V}$, $\sim 19.2...30\text{ V}$ power supplies and relay outputs

TWD LC●A 10DRF

TWD LC●A 24DRF

TWD LC●A 16DRF

TWD LCA● 40DRF (2)

(1) TWD LCA● ●DRF: $\sim 100...240\text{ V}$, TWD LCDA ●DRF: $\sim 19.2...30\text{ V}$.
 (2) $\sim 100...240\text{ V}$ supply only, identical to TWD LCA● ●DRF.

TWD LMDA 20DRT

TWD LMDA 40DTK/40DUK

Presentation

The modular programmable controller range includes five base controllers, which differ in their processing capacity and their number and type of I/O (20 or 40 I/O with connection by screw terminal block or HE 10 type connector, with relay or sink/source transistor outputs). They can be fitted with any of the I/O expansion modules in the range (18 discrete and analog modules). All these modular base controllers use a \approx 24 V power supply.

These modular base controllers offer:

- Modular design to adapt to the needs of the application by using a base controller which can be fitted with up to 4 or 7 discrete or analog I/O expansion modules (depending on the model).

- A variety of options which offer the user a degree of flexibility which is generally only available with larger automation platforms. TWD LMDA modular base controllers can be fitted simultaneously with an optional memory cartridge module, a real-time clock cartridge module and a digital display module or serial interface module; both of the latter two modules allow the addition of a second RS 485 or RS 232C communication port.

- The modular controller solution also allows great wiring flexibility. Several types of connection are offered, such as removable screw terminal blocks, spring type connections or HE 10 type connectors which allow simple, fast and safe wiring. The Telefast for Twido system provides a pre-wired cabling solution, allowing connection of modules with HE 10 type connectors to:

- pre-formed cables with free wires at one end for direct connection to sensors/pre-actuators
- Advantys Telefast pre-wired system for Twido (connection cable and Telefast sub-base assembly)

- TwidoSoft software allows easy programming using instruction list language instructions or ladder language graphic objects. It uses the same objects and sets of instructions as those used by PL7-07 software for TSX07 Nano programmable controllers. TwidoSoft software allows existing TSX07 Nano PLC applications to be reused with Twido controllers by importing an ASCII file.

- Modular base controllers include:

- 1 analog voltage input, 0...10 V 9 bits (512 points)
- 1 analog adjustment point accessible on the front panel. This point can be set to a value between 0 and 1023

Modular base controller	\approx 24V inputs	Outputs	Type of connection	Serial ports	I/O expansion	Interface module extension	Optional cartridge
TWD LMDA 20DTK	12 sink/source	8 source transistor	HE 10 type connector	1 x RS 485, + option of 1 x RS 232C/485	4 modules	1 module: display or serial link	2 slots: real-time clock and memory
TWD LMDA 20DUK	12 sink/source	8 sink transistor	HE 10 type connector	1 x RS 485, + option of 1 x RS 232C/485	4 modules	1 module: display or serial link	2 slots: real-time clock and memory
TWD LMDA 20DRT	12 sink/source	6 relay, 2 source transistor	Removable screw terminal block	1 x RS 485, + option of 1 x RS 232C/485	7 modules	1 module: display or serial link	2 slots: real-time clock and memory
TWD LMDA 40DTK	24 sink/source	16 source transistor	HE 10 type connector	1 x RS 485, + option of 1 x RS 232C/485	7 modules	1 module: display or serial link	2 slots: real-time clock and memory
TWD LMDA 40DUK	24 sink/source	16 sink transistor	HE 10 type connector	1 x RS 485, + option of 1 x RS 232C/485	7 modules	1 module: display or serial link	2 slots: real-time clock and memory

Description

Twido TWD LMDA ●0 D●● base controllers comprise:

On the front panel:

- 1 A hinged door
- 2 An analog adjustment point
- 3 A connector for connection of the built-in analog input
- 4 A display block showing:
 - the status of the controller (PWR, RUN, ERR and STAT)
 - the status of the inputs and outputs (INi and OUTi)
- 5 A mini-DIN type RS 485 serial port connector (allowing connection of the programming terminal)
- 6 Two slots (protected by a removable cover) for memory cartridge TWD XCP MFK●● and real-time clock cartridge TWD XCP RTC
- 7 One (or more) HE 10 type connector(s) or screw terminal block for connection of the input sensors/output pre-actuators
- 8 Screw terminals for connection of the ~ 24 V mains power supply

On the right-hand side panel:

- 9 A connector for I/O expansion modules TWD D●●, TWD A●● and TWD NOI 10M3 (4 or 7 depending on model)

On the left-hand side panel:

A connector for display module TWD XCP ODM or serial interface module TWD NOZ ●●●● (not visible)

Modular base controllers are mounted on a symmetrical □ rail. Mounting kit TWD XMT5 (supplied in lots of 5) allows plate or panel mounting.

Example of configuration with expansion modules and extension

Shown opposite, an example configuration consisting of a TWD LMDA 20DRT modular base controller with:

- built-in display module TWD XCP ODM on the left
- two I/O expansion modules TWD DDI 8DT and TWD DDO 16K on the right

The modular base controller is fitted with real-time clock cartridge TWD XCP RTC and memory extension cartridge TWD XCP MFK64.

General characteristics of modular base controllers

Temperature	°C	Operation: 0...+ 55; Storage: - 25...+ 70				
Relative humidity		30 to 95 %, without condensation				
Degree of protection		IP 20				
Altitude	m	Operation: 0...2000; Storage: 0...3000				
Vibration resistance	Mounted on  rail	Hz	10...57, amplitude 0.075 mm, acceleration 57...150 Hz			
	Plate or panel mounted (using mounting kit TWD XMT5)	m/s ²	9.8 (1 gn)			
		Hz	2...25, amplitude 1.6 mm, acceleration 25...100 Hz			
		m/s ²	39.2 (4 gn)			
Shock resistance		m/s ²	147 (15 gn) for 11 ms			
Backup battery	Data backed up		Internal RAM: internal variables, internal bits and words, timers, counters, shift registers...			
	Autonomy	days	Approximately 30 at 25 °C with fully charged battery			
	Battery type		Lithium battery, not interchangeable			
	Charging time	h	Approximately 15 to charge from 0...90% of the full charge			
	Life	years	10			
Base controller type	TWD	LMDA 20DTK	LMDA 20DUK	LMDA 20DRT	LMDA 40DTK	LMDA 40DUK
Number of \pm 24 V inputs		12			24	
Number and type of outputs (1)		8 source transistor	8 sink transistor	6 relay, 2 source transistor	16 source transistor	16 sink transistor
Connection of I/O		HE 10 type connector		Removable screw terminal block	HE 10 type connector	
I/O expansion modules	Maximum number of modules	4		7		
	Maximum number of I/O	84/148 (2)		132/244 (2)	152/264 (2)	
	AS-Interface	Management of slave modules: 62 (discrete), 7 (analog)				
Application memory capacity		3000 instructions		3000 instructions, 6000 with memory cartridge TWD XCP MFK64		
Cycle time	Processing time	ms	1 for 1000 logic instructions			
	System overhead	ms	0.5			
Data memory	Internal bits		256			
	Internal words (3)		3000			
	Timers (3)		128			
	Counters (3)		128			
	Double words		Yes			
	Floating, trigonometrical			Yes		
Power supply	Rated voltage	V	\pm 24			
	Voltage range	V	\pm 20.4...26.4 including ripple			
	Maximum input current	mA	560 at 26.4 V		700 at 26.4 V	
	Maximum inrush current	A	50			
	Consumption	W	15 (base with 4 I/O expansion modules)		19 (base with 7 I/O expansion modules)	

Communication

Function		Built-in serial link	Optional serial interface module (4)
Port type		RS 485	RS 232C, with module TWD NOZ 232D RS 485, with module TWD NOZ 485●
Maximum data rate	K bits/s	38.4	
Isolation between internal circuit and serial port		Not isolated	
Programming terminal connection		Half-duplex terminal port	No
Communication protocols		Modbus Master/Slave RTU. ASCII character mode	
Remote Link I/O		Yes, see page 45	

Integrated functions

Counter	Number of points		4
	Frequency		2 channels at 5 kHz (function FCi), 2 channels at 20 kHz (function VFCi)
	Capacity		16 bits FC, 32 bits VFCi for versions \geq 2.5
Positioning	Number of points		2
	Frequency	kHz	7
	Functions		PWM, pulse width modulation output; PLS, pulse generator output
Analog input	Number of channels		1 channel
	Range		0...10 V
	Resolution		9 bits (0...511 points)
	Input impedance	k Ω	100
PID			For controller versions \geq 2.0
Event processing			For controller versions \geq 2.0
Analog adjustment points			1 point adjustable from 0...1023 points

(1) Source output: positive logic, sink output: negative logic.

(2) The first value corresponds to the maximum number of I/O (base controller and expansion module) with screw or spring terminal expansion modules, the second value is for HE 10 type connector expansion modules.

(3) The maximum values cannot be cumulated.

(4) Or with serial interface adapter TWD NAC ●●● fitted in built-in display module TWD XCP ODM.

Presentation

The range of Twido I/O modules includes input modules, output modules and mixed input/output modules. With the 15 I/O modules offered, in addition to the I/O integrated in 24 I/O compact base controllers and modular base controllers, configurations can be adapted to best suit application requirements, so optimizing costs. The following discrete I/O modules are available:

- 1 ~ 120 V discrete input module, 8 channels, fitted with a removable screw terminal block
- 4 ~ 24 V discrete input modules comprising an 8-channel module, two 16-channel modules and a 32-channel module, equipped with either removable screw terminal blocks or HE 10 type connector, depending on the model. These modules can be either "sink or source".
- 8 discrete output modules comprising two output modules with 8 and 16 relay outputs, three output modules with 8, 16 or 32-channel "sink" transistor outputs and three output modules with 8, 16 or 32-channel "source" transistor outputs, equipped with either removable screw terminal blocks or HE 10 type connector, depending on the model
- 2 discrete mixed input and output modules, comprising one 4-channel input/4-channel relay output module with removable screw terminal block and one 16-channel input/8-channel relay output module with non-removable spring terminal block

The narrow width of these I/O modules (17.5 mm, 23.5 mm, 29.7 mm or 39.1 mm) makes it possible to build Twido configurations of up to 264 I/O with a minimal overall size of L 10.0" (255.4 mm) x H 3.54" (90 mm) x D 3.2" (81.3 mm).

All these discrete I/O modules and the analog I/O modules are connected to the base controller by stacking them on a \perp rail, starting from the right-hand side panel of the base controller, according to the following rules:

- For 24 I/O compact base controllers TWD LC●A 24DRF: 4 modules max. (see characteristics page 6)
- For 40 I/O compact base controllers TWD LCA● 40DRF: 7 modules max. (see characteristics page 6)
- For 20 I/O modular base controllers TWD LMDA 20D●K: 4 modules max. (see characteristics page 15)
- For 20 and 40 I/O base controllers TWD LMDA 20DRT/40D●K: 7 modules max. (see characteristics page 15)

All the discrete I/O modules are electrically isolated with the use of a photocoupler between the internal electronic circuit and the input/output channels.

Description

Twido discrete I/O modules comprise:

- 1 An extension connector for electrical connection to the previous module (1)
- 2 One or two blocks for displaying the channels and module diagnostics
- 3 One or two connection components of varying type, depending on the model:
 - removable screw terminal block (1 or 2) for modules whose reference ends in **T**
 - HE 10 type connector (1 or 2) for modules whose reference ends in **K**
 - non-removable spring terminal block for module TWD DMM 24DRF
- 4 Latching mechanism for attachment to the previous module

These modules are mounted on a symmetrical \perp rail. Mounting kit TWD XMT 5 (supplied in lots of 5) allows plate or panel mounting. For modules with removable screw terminal block, the terminal blocks are supplied with the module.

(1) A connector on the right-hand side panel ensures continuity of the electrical link with the next I/O module.

Module with removable screw terminal block

Module with HE 10 type connector

General characteristics

Presentation

Twido analog I/O expansion modules enable the acquisition of various analog values encountered in industrial applications.

Analog output modules are used to control the pre-actuators in devices such as variable speed drives, valves and applications that require process control. The output current or voltage is proportional to the numerical value defined by the user program. When the Twido controller stops, the outputs can be configured with fallback (reset to the lowest scale value or hold the last value received). This function, when set to 'hold', is useful when debugging the application or when a fault occurs, in order not to disturb the process being controlled.

The 8 following analog I/O modules are available:

- One module with 2 inputs: 0...10 V, 4...20 mA
- One module with 4 inputs: 0...10 V, 0...20 mA, Pt 100/1000, Ni100/1000 range 122 ... 302 °F (50...150 °C)
- One module with 8 inputs: 0...10 V, 0...20 mA
- One module with 8 inputs: PTC/NTC
- One module with 1 output: 0...10 V, 4...20 mA
- One module with 2 outputs: ± 10 V
- One mixed module with 2 inputs: 0...10 V, 4...20 mA and 1 output: 0...10 V, 4...20 mA
- One mixed module with 2 thermocouple or temperature probe inputs and one 0...10 V, 4...20 mA output

Twido analog extension modules offer a resolution of 10 bits, 11 bits + sign and 12 bits, with connection by removable screw terminal block. An external ≈ 24 V power supply is required for each analog module.

Like discrete I/O modules, analog I/O modules are connected to the base controller by stacking them on a \sim rail, starting from the right-hand side panel of the base controller, according to the following rules:

- For 24 I/O compact base controllers TWD LC●A 24DRF: 4 modules max. (see characteristics page 8)
- For 40 I/O compact base controllers TWD LC●A 40DRF: 7 modules max. (see characteristics page 8)
- For 20 I/O modular base controllers TWD LMDA 20D●K: 4 modules max. (see characteristics page 15)
- For 40 I/O modular base controllers TWD LMDA 20DRT/40D●K: 7 modules max. (see characteristics page 15)

All analog I/O modules are electrically isolated with the use of a photocoupler between the internal electronic circuit and the input/output channels

Description

Twido analog I/O modules comprise:

- 1 An extension connector for electrical connection to the previous module (1)
- 2 A block for displaying the channel and module diagnostics
- 3 A removable screw terminal block for connection of the ≈ 24 V external power supply, the sensors and the pre-actuators
- 4 A latching mechanism for attachment to the previous module

These modules are mounted on a symmetrical \sim rail. Mounting kit TWD XMT 5 (supplied in lots of 5) allows plate or panel mounting.

(1) A connector on the right-hand side panel ensures continuity of the electrical link with the next I/O module.

Consumption		Internal supply --- 5 V mA 50		50		
(for TWD AMO 1HT)		External supply --- 24 V mA 40		60		
Applicable load		–				
Dielectric strength		–				
		2500 V between the outputs and the internal circuit				

References

These analog I/O expansion modules are mounted on symmetrical rails to the right of the Twido base controller. The sensors/pre-actuators are connected to a removable screw terminal block (supplied with each module). The maximum number of I/O and/or analog modules which may be mounted depends on the type of base controller:

- For a Pt 100 3-wire temperature probe (RTD), connect the three wires to terminals A, B' and B (channels IN0 and IN1).
- For a Pt 100 2-wire temperature probe (RTD), connect the two wires to terminals A and B' and make a bridge between B' and B (channels IN0 and IN1).
- For a thermocouple, connect the two wires to the + and - terminals (channels IN0 and/or IN1).
- Do not connect any wires to unused channels.

Presentation

Master module TWD NOI 10M3, for AS-Interface cabling system allows the Twido controller (version ≥ 2.0) to perform the function of AS-Interface master.

The cabling system consists of a master station (Twido controller) and slave stations. The master, which supports the AS-Interface profile, polls each of the devices connected to the AS-Interface cabling system, in turn, and stores information gathered (sensor/actuator status, operating status of the devices) in the controller memory. Communication on the AS-Interface cabling system is managed in a way that is totally transparent to the Twido application program.

The TWD NOI 10M3 master module manages the following with the AS-Interface M3 profile:

- discrete slave modules (maximum of 62 slaves arranged in 2 banks, A and B, of 31 addresses each)
- analog slaves (maximum of 7 slaves in bank A)

The AS-Interface M3 profile supports analog profile 7.3 (7 slaves), but does not support analog profile S-7.4.

The maximum number of TWD NOI 10M3 modules per Twido controller is 2. 7 discrete, analog and AS-Interface I/O modules are controlled by TwidoSoft software, see page 64.

An AS-Interface power supply is essential to supply the various modules on the cabling system. It should preferably be located close to the stations with high power consumption.

For more information on power supplies, see pages 10 and 16.

Description

Module TWD NOI 10M3 takes the form of a standard-size module. It is connected to a Twido base controller (compact or modular) in the same way as any I/O module. It has the following on the front panel:

- 1 A display block comprising:
 - 6 pilot lights indicating the module operating modes:
 - green PWR pilot light: module powered up
 - red FLT pilot light: error in the configuration loaded
 - green LMO pilot light: module in local mode
 - green CMO pilot light: module in connected mode
 - red CNF pilot light: not used
 - red OFF pilot light: module in protected, unconnected mode
 - 6 green pilot lights, 3 for inputs, 3 for outputs:
- 2 A block for displaying the status of the addresses
- 3 Two push buttons PB1 and PB2 for controlling the status of the slaves by selecting their address and changing the mode
- 4 An extension connector for electrical connection to the previous module
- 5 A connector (on the RH side) for I/O expansion modules TWD D●● and TWD A●● (4 or 7 depending on version)
- 6 A latching mechanism for attachment to the previous module
- 7 A power supply removable screw terminal block

Diagnostics

The 30 pilot lights on the front panel of the module are used in conjunction with the two push buttons for diagnostics by the Twido controller.

The display block on the front panel of master module TWD NOI 10M3 allows simplified local diagnostics to be performed by displaying the slaves present on the AS-Interface cabling system.

Software set-up

The AS-Interface cabling system is configured by the TwidoSoft software, see pages 64 to 71.

The services offered are based on the principle of simplicity:

- Management of profile tables, parameters and data by the master is done, in a way that is transparent to the user.
- Topological addressing of I/O: any AS-Interface slave defined on the cabling system has a topological address assigned to it, in a way that is transparent to the user.

Each AS-Interface module sensor/actuator is seen by the Twido programmable controller in the same way as any "In-rack" I/O.

General characteristics

Module type		TWD NOI 10M3	
AS-Interface profile		AS-Interface M3, V 2.11 (profile S-7.4 not supported)	
Type of addressing		Standard and extended	
Product certifications		AS-Interface n° 47801	
Degree of protection		IP 20	
Altitude	m	Operation: 0...2000. Transport: 0...3000	
Temperature	°C	Operation: 0...+ 55. Storage: - 25...+ 70	
Relative humidity		30 to 95 % (without condensation)	
Degree of pollution		2 conforming to IEC 60664	
Immunity to corrosion		Free of corrosive gases	
Vibration resistance	Mounted on rail	Hz	10...57, amplitude 0.075 mm, 57...150 (acceleration: 9.8 m/s ²); for 2 hours on all 3 axes
	Plate or panel mounted (using mounting kit TWD XMT5)	Hz	2...25, amplitude 1.6 mm, 25...100 (acceleration: 39.2 m/s ²); for 90 minutes on all 3 axes
Shock resistance		m/s ²	147 (15 gn) duration 11 ms, on all 3 axes
AS-Interface external power supply		V	29.5...31.6
Internal current	At 5 V	mA	80
	At 24 V	mA	0
AS-Interface consumption at 24 V		mW	540

Communication characteristics

As-Interface cabling system cycle time	With 1 to 19 slaves	ms	3
	With 20 to 62 slaves	ms	0.156 x (1 + N) where N = number of active slaves
	With 31 standard slaves or slaves in banks A and B	ms	5
	With 62 slaves in banks A and B	ms	10
Max. no. of modules	Analog modules (1)		7
	Discrete modules (1)		62
Max. no. of I/O	Standard slaves		248 = 124 inputs + 124 outputs
	Slaves in banks A and B		434 = 248 inputs + 186 outputs
Max. length of AS-Interface cable	Without splitter block or extension	m	100
	With a total of 2 splitter blocks or extensions	m	300
AS-Interface cabling system voltage		V	30

Presentation

In order to communicate with an intelligent environment, Twido compact and modular programmable controllers offer an RS 485 serial communication port on the modules, an optional type RS 485 or RS 232 link and, for compact base controller TWD LCAE 40DRF, an integrated RJ45 Ethernet port (Modbus TCP).

These three ports allow Twido compact and modular controllers to use six communication protocols: Programming, Modbus, CANopen, Ethernet, ASCII and "Remote link".

Twido compact (TWD LC●A 24DRF or TWD LCA● 40DRF) or modular base controllers can also accommodate the CANopen bus master module TWD NCO1M.

TwidoPort interface module 499 TWD 01 100, used in conjunction with a compact or modular Twido programmable controller version ≥ 3.0 allows communication on the Ethernet network under Modbus TCP. This solution, which is easy to connect and configure, is transparent to the application.

Description

Compact base controllers have the following on the front panel:

- 1 An RS 485 serial port, with mini-DIN type connector, for connection to the programming terminal
- 2 A slot for fitting a 2nd optional port (RS 485/RS 232) using TWD NAC ●●● adapters

Modular base controllers have the following on the front panel:

- 1 An RS 485 serial port, with mini-DIN type connector, for connection to the programming terminal

The slot for fitting a 2nd optional port (RS 485/RS 232) using adapters TWD NAC ●●● is located behind the removable cover 2 of a TWD NOZ ●●●● interface module 3 or a TWD XCP ODM display module 4

The interface and display modules connect to the left-hand side of modular base controllers.

Presentation

Master module TWD NCO1M for the CANopen bus allows Twido programmable controllers version ≥ 3.0 - compact controller models TWD LC●A 24DRF or TWD LCA● 40DRF and all modular controllers - to act as CANopen master. The bus consists of a master station, the Twido controller and slave stations. The master is in charge of configuration, exchanges and diagnostics on the slaves. The CANopen bus is a communication type bus and allows management of various slaves such as:

- Discrete slaves
- Analog slaves
- Variable speed controllers
- Motor starters

The Twido CANopen master controls up to 16 slaves, each with an input PDO (Process Data Object) and an output PDO.

If a slave has more than one PDO, the maximum number of slaves managed is reduced by that number. The Twido CANopen master can control a maximum of 16 input PDO and 16 output PDO.

Description

CANopen bus master module TWDNCO1M comprises:

- 1 An grounded, 3-way, $\overline{\text{---}}$ 24 V supply connector
- 2 A PWR LED, indicating module power ON or OFF
- 3 A 9-way SUB-D connector for connection to the CANopen bus
- 4 An ground screw
- 5 A connector for connection to the Twido controller or to another I/O expansion module

Configuration

The Twido controller's CANopen bus is configured using TwidoSoft software version ≥ 3.0 .

The various services offered are:

- Selection of the slave type from a list that can be modified by simply importing a description file of the EDS (Electronic Data Sheet) type
- The position of the slave on the bus: definition of the slave number
- Selection of variables from the list of variables managed by the slave
- Linking of variables to the exchange data
- Symbolization of exchange data

For certain slaves, such as ATV 31 variable speed controllers, one or more profiles are supplied allowing the slave to be configured according to a mode predefined by Schneider Electric. The use of profiles provides the user with an operating mode that is described, without having to configure it.

TWD NCO1M

Characteristics

Module type		TWD NCO1M	
Operating temperature	°C	0...55	
Storage temperature	°C	- 25...+70	
Relative humidity		30...95 % (without condensation)	
Level of pollution conforming to IEC 60664-1	Housing	3	
	PCB	2	
Degree of protection		IP 20	
Immunity to corrosion		Against corrosive gases	
Altitude	Operation	m	0...2000
	Transport	m	0...3000
Vibration resistance	Rail mounting	10...57 Hz with an amplitude of 0.075 mm, 57...150 Hz with an acceleration of 9.8 m/s ² (1 gn), Duration: 2 hours per axis on each of the three axes perpendicular to each other.	
	Plate or panel mounting (using mounting kit TWD XMT5)	2...25 Hz with an amplitude of 1.6 mm, 25...100 Hz with an acceleration of 39.2 m/s ² (4 gn), Duration: 90 min per axis on each of the three axes perpendicular to each other.	
Shock resistance	Conforming to IEC 61131	147 m/s ² (15 gn), duration 11 ms, 3 impact shocks per axis, on the three axes perpendicular to each other.	
Permissible voltage variation	$\overline{\text{---}}$ V	19.2...30	
Protection against polarity inversion on the bus inputs		Yes	
CANopen bus interface connector		9-way SUB-D

Power dissipated		W	1.2 (at $\overline{\text{---}}$ 24 V)

499 TWD 01100

Presentation

TwidoPort module 499 TWD 01100 is an Ethernet interface that is easy to use and dedicated to a compact or modular Twido programmable controller version ≥ 3.0 . It allows incorporation of the Twido controller into an Ethernet network as a passive device (slave). With version 3.0 of TwidoSoft software and of the Twido operating system, the TwidoPort module is ready for use.

When connected to the RS 485 port of the Twido programmable controller, the TwidoPort module acts as a gateway between the Ethernet network and the Modbus network.

The connecting cable is supplied with the module.

The main characteristics of the TwidoPort module are as follows:

- Connects to the RS 485 port of the Twido controller; no external auxiliary supply is necessary
- Automatic detection of the serial link configuration
- Ethernet interface:
 - 10/100 Mbit/s
 - Auto MDIX function
 - RJ45 type connector
- Ethernet configuration:
 - takes the Ethernet configuration from the Twido application configuration (normal mode)
 - BootP function
 - supports manual configuration using Telnet
- Provides Ethernet statistics via a Telnet session

Description

TwidoPort 499 TWD 01100 interface module comprises:

- 1 Five LEDs (SER ACT, STATUS, LINK, 100 MB, ETH ACT) indicating performances associated with the TwidoPort module
- 2 An RJ45 connector for connection of the power supply and communications to the RS 485 on the Twido controller, cable **TWD XCA RJP03P** supplied (1)
- 3 An RJ45 connector (accessed through the bottom of the module) for connection to the Ethernet TCP/IP network
- 4 An grounding screw (accessed through the bottom of the module)

Characteristics

Module type		499 TWD 01100	
Operating temperature		°C	0...55
Storage temperature		°C	- 40...+70
Relative humidity			10...95 % (without condensation)
Level of pollution	Conforming to IEC 60664-1		2
Degree of protection			IP 20
Immunity to corrosion			Against corrosive gases
Altitude	Operation	m	0...2000
	Storage	m	0...3040
Vibration resistance	Rail mounting		10...57 Hz with an amplitude of 0.075 mm (peak to peak), 57...100 Hz with constant acceleration of 9.8 m/s ² (1 gn), Duration: 10 cycles at 1 octave/min for each of the 3 perpendicular axes.
Shock resistance	Conforming to IEC 61131-2		147 m/s ² (15 gn), duration 11 ms, 3 impact shocks for each of the 3 perpendicular axes.
Max. consumption	At \approx 5 V	mA	180
Supply voltage		\approx V	5 \pm 0.5

(1) Cable **TWD XCA RJP03P**, connected to port 1 on the Twido controller, forces configuration of the port according to the parameters of the Programming protocol. Using cable **TWD XCA RJP03**, sold separately, allows port 1 of the Twido controller to be used with the parameters described in the application configuration.

Programming protocol

Link by modem

“Remote link” protocol

(1) Connection is made either to the serial port,
or to the optional port.

“Remote Link” decentralized I/O

Each compact or modular base controller can be extended by means of Twido base controllers used either as an I/O extension, or as a local “reflex” controller.

- When used as an I/O extension, these base controllers cannot take any I/O extensions.
- When used as a local “reflex” controller, these base controllers have their own application program. Internal words are reserved for automatic exchange of information between the base controllers.

- 1 Base controller
- 2 RS 485, 3-wire cable on serial port or on optional port
- 3 Twido base controllers used as I/O extension or as local “reflex” controller

Characteristics

Protocol type	“Remote link”

Description	Application	Reference	Weight kg
Bluetooth gateway	Range 10 m (class 2). Items supplied: ■ 1 Bluetooth gateway with 1 RJ45 connector, ■ 1 x 0.1 m length cable with two RJ45 connectors, ■ 1 x 0.1 m length cable with one RJ45 connector and one mini-DIN connector for TwidoSoft software, ■ 1 x RJ45/9-way SUB-D adapter.	VW3A8114 ■	0.155

Bluetooth gateway for non-equipped PC	Range 10 m (class 2). Required for a PC not equipped with Bluetooth technology. Connection to the USB port on the PC.	VW3A8115 ■	0.300
--	---	-------------------	-------

(1) Replace the ●● in the reference with 02: 2 m, 05: 5 m, 12: 12 m, 40: 40 m and 80: 80 m.

(2) Cable **TWD XCA RJP03P**, connected to port 1 on the Twido controller, forces configuration of the port according to the parameters of the Programming protocol. Using cable **TWD XCA RJP03**, sold separately, allows port 1 of the Twido controller to be used with the parameters described in the application configuration.

(3) PC with TwidoSoft software installed and running under Windows 2000 or XP operating system only.

Presentation

Relay and connection functions, with or without polarity distribution, significantly reduce wiring time and eliminate the risk of error.

The Advantys Telefast pre-wired system allows fast, reliable and economical remote connection of I/O modules (— 24 V discrete) to operative parts, partly eliminating the single-wire connection and intermediate terminal blocks.

The Telefast system can only be connected to Twido modules equipped with HE 10 type connectors. It consists of connecting cables and interface sub-bases.

The Telefast range is suitable for all types of connection found in control system devices:

- I/O located in the PLC cabinet
- I/O located directly on the machine or in auxiliary enclosures

All the I/O connection sub-bases comprise output terminals on 2 rows :

- 1st row: connection of the signal
- 2nd row: connection of its common
- 24 V for the inputs
- 0 V for the outputs

A 3rd row of optional terminals ABE 7BV●● may be added for connection of another common.

These I/O sub-bases are available in different configurations:

Sub-bases for Twido modular base controllers

- **ABE 7B20MPN20:** sub-base with 12 inputs + 8 passive outputs
- **ABE 7B20MPN22:** sub-base with 12 inputs + 8 passive outputs
 - individual fuse protection for each output (0.315 A)
 - LED indication
 - blade disconnecter for the 0 V common
- **ABE 7B20MRM20:** sub-base with 12 inputs + 8 outputs with soldered relays
 - 2 A solid state relay (1 x 4 A common/2 channels) on 2 outputs
 - electromechanical relays (1N/O — 24 V/~ 250 V, 3 A) on 6 outputs for adaptation of the current or voltage signal (1 x 10 A common/6 channels)

Sub-bases for Twido extension modules

- **ABE 7E16EPN20:** sub-base with 16 passive inputs
- **ABE 7E16SPN20:** sub-base with 16 passive outputs
- **ABE 7E16SPN22:** sub-base with 16 passive outputs
 - individual fuse protection for each output (0.315 A)
 - LED indication
 - blade disconnecter for breaking the 0 V common
- **ABE 7E16SRM20:** sub-base with 16 soldered relay outputs
 - electromechanical relays (1N/O — 24 V/~ 250 V, 3 A) on 16 outputs for adapting the current or voltage signal (1 x 5 A common/4 channels)

Optional terminal blocks

- **ABE 7BV20TB**
 - 12 shunted screw terminals for the input common
 - 8 shunted screw terminals for the output common
- **ABE 7BV20**
 - 20 shunted screw terminals for connection of a single common

Description

Connection sub-bases ABE 7B20M●●●●, ABE 7E16SRM20 and ABE 7E16SPN22

- 1 HE 10 connector (20-way for ABE 7E16●●●●●, 26-way for ABE 7B20●●●●●)
- 2 Fuse for the --- 24 V supply circuit
- 3 Rail mounting
- 4 LED for channel indication (only on ABE 7B20MPN22 and ABE 7E16SPN22)
- 5 --- 24 V power supply terminal block
- 6 Blade disconnecter on --- 0 V (only on ABE 7B20MPN22 and ABE 7E16SPN22)
- 7 Legend holder cover: customer marking on outside and sub-base wiring scheme on inside, providing access to fuses per channel (only on ABE 7B20MPN22 and ABE 7E16SPN22)
- 8 Test point for \varnothing 2.3 mm plug
- 9 Upper terminal block for connection of signals
- 10 Lower terminal block for connection of commons
- 11 Optional snap-on terminal block with 20 screw terminals

Connection sub-bases ABE 7E16EPN20 and ABE 7E16SPN20

- 1 HE 10 connector, 20-way
- 2 Fuse for the --- 24 V supply circuit
- 3 Rail mounting
- 4 --- 24 V power supply terminal block
- 5 Test point for \varnothing 2.3 mm plug
- 6 Upper terminal block for connection of signals
- 7 Lower terminal block for connection of commons
- 8 Optional snap-on terminal block with 20 screw terminals

Presentation

TwidoSoft is a graphical development environment for creating, configuring and managing applications for Twido programmable controllers. TwidoSoft is a 32-bit Windows-based program which runs on a PC with Windows 98 (second edition), 2000 or XP operating system. TwidoSoft software is based on a standard interface which offers the user-friendly features of the Windows environment with which users are already familiar: windows, toolbars, pull-down menus, balloon tips, context-sensitive help, etc.

For development work, TwidoSoft provides a comprehensive set of features to simplify programming and configuration:

- Programming in instruction list or ladder language. These two languages are reversible
- Application browser with multiple window views, aiding easy software configuration
- Editors for main programming and configuration functions
- Cut, copy and paste functions
- Symbolic programming
- Cross-referencing
- Duplication of application programs

On site (on-line mode), TwidoSoft provides the following main functions:

- Real-time animation of program and/or data elements
- Diagnostics on programmable controller operation
- Monitoring of the application's use of memory
- Downloading and uploading of controller programs
- Backup of controller programs to the optional EEPROM memory modules

Connecting a PC to a Twido controller

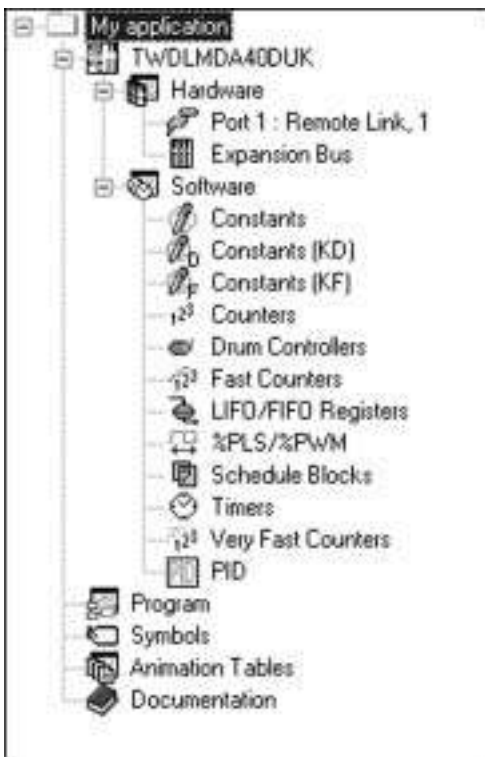

- The PC is connected to the built-in serial port of the Twido controller by means of a TSX PCX 1031 multifunction cable or to a USB port using cable TSX PCX 3030 (Windows 2000 or XP only). It converts RS 232 output signals from the PC to RS 485 signals for the controller.

Connection of a PC, via cable, to the built-in port of Twido base controllers automatically sets the communication protocol of this port to a protocol which is compatible with TwidoSoft.

- It is also possible to connect the PC to the serial port of Twido base controllers via modems.

The modems used must be defined, for TwidoSoft via the "Preferences" screen, and for the Twido controller, via the hardware configuration ("Connection management" screen).

When the connection is established, TwidoSoft and the Twido controller will each initialize the modem assigned to them by sending a initialization string of the Hayes protocol type.

User interface

TwidoSoft provides an intuitive, Windows-based user interface, including balloon tips and on-line help. The Twido user interface offers the following features:

- **Application browser:** this browser is a window providing the directory structure of the application. The windows and toolbars can be moved and attached to the borders of the main window. The elements of an application appear in a logical hierarchy based on their structure within the application. They are arranged as an indented tree structure which can be expanded or collapsed. The application browser can be used to view, program and manage a Twido application and to configure hardware using a graphical representation of the base controllers, I/O extensions and options.
- **Status bar:** this is a panel at the bottom of the main window which displays information about the application, the controller status and the TwidoSoft software mode. This bar includes a "memory usage indicator", indicating the percentage of total memory used by the program. A warning message is displayed when available memory is getting low.
- **Operating modes:** TwidoSoft software can operate in on-line mode (PC connected to the Twido base controller) and off-line mode (PC disconnected from the Twido base controller). Off-line mode is used to develop an application in the design office. This application must then be transferred from the PC memory to the controller memory (downloaded) in order to be able to run on the controller. On-line mode is used to debug and adjust this application. In this mode, the application program in the PC memory is identical to the application in the controller memory. Program changes can therefore be made directly to the application in the Twido controller.

Editors and viewers

TwidoSoft provides special windows, called editors, for performing the main tasks necessary to develop an application. A TwidoSoft application consists of a program, configuration data, symbols allocated to the variables and documentation. These components can be used in any order when creating an application.

Developing each part of an application using separate editors makes it possible to rationalize the development process. TwidoSoft software provides:

- Instruction List language and Ladder language editors
- A configuration editor
- Variables editors (with symbols) and animation table editors
- Ladder language, cross reference and program error viewers

TwidoSoft software also provides security features to protect the integrity of programs. "Application protection" right of access prevents access to the controller application. This option prohibits unauthorised transfers of an application. Password protection is selected when an application is transferred to the controller to make access to the application secure.

Configuration of hardware and software

Configuring Twido programmable controllers consists of selecting options for the controller's hardware and software resources. These resources can be adapted at any time while creating a program:

- **Hardware resources** allow the user to define the type and number of Twido components in a configuration: base controller, remote controllers, I/O expansion modules and optional modules.
- **Software resources** consist of configurable and non configurable functions. Function blocks (also called variables) are blocks created in memory to execute automation functions which will be used by the program. For example, when configuring a counter function block, memory addresses in the controller are assigned to represent the values associated with the parameters of this counter (current values, preset values). Other software resources are called internal memory blocks, such as bits, words, constant words, system words, network exchange words.

These resources are configured using TwidoSoft software.

Programming

TwidoSoft allows the user to write a controller program in either Ladder language or instruction List language. The language selected depends on user preference and does not affect the application:

- Ladder language consists of a series of ladder rungs, represented graphically, together with text comments.
- Instruction List language consists of a series of text-based instructions.

In either language, the program is "written" in the logical order required to control the machine or process. It is recommended that the programs be "documented" by adding comments (explanatory text inserted at program instruction level).

These two languages are reversible, provided that a few basic rules are followed:

Ladder programming

A program written in Ladder language consists of networks of linked graphical elements (similar to electromagnetic contact diagrams), organized into rungs which are executed sequentially by the controller when it is in RUN mode.

Each rung comprises graphical elements (contacts, coils) linked by horizontal and vertical "lines", organized into a programming grid starting with a potential bar on the left and ending with a second potential bar on the right. The graphical elements are associated with:

- Controller inputs and outputs, such as sensors, pushbuttons and relays
- Arithmetic, logic and numeric value comparison operations
- Control system function blocks, such as timers, counters, drum controllers, registers
- Controller internal variables, such as internal bits and words

In on-line mode (PC connected to the Twido base controller) phrases (rungs) can be modified, added or deleted. These modifications can be made when the Twido controller is in either "STOP" or "RUN" mode.

Instruction List programming

A program written in instruction List language consists of a series of instructions executed sequentially by the controller. Each instruction is represented by a single program line and consists of three components:

- Line number - line numbers are generated automatically when the instructions are entered.
- Instruction code - the instruction code is a symbol linked to an operand identifying the operation to be performed on this operand. These operations are generally of the Boolean and numerical type.
- Operand - an operand is a reference, a symbol or a number representing a piece of physical data. For example, in the program opposite, the operand %I0.4 is the reference corresponding to a controller discrete input.

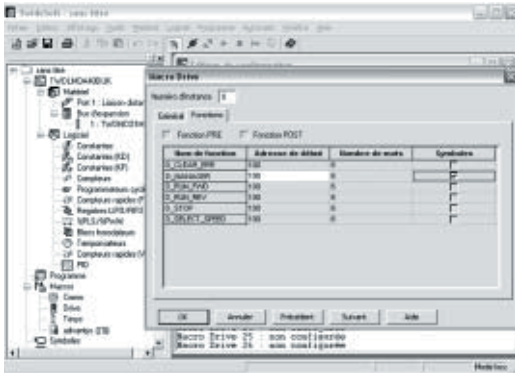

Programmable controller variables

An instruction can include from zero to three operands, depending on the type of instruction code. The operands may be:

- Sensor image inputs (detectors, control buttons, etc.)
- Pre-actuator output images (contactors, solenoid valves, pilot lights, etc.)
- Internal bits (equivalent to the internal relays in electromagnetic control equipment)
- Control system function blocks (timers, counters, drum controllers, registers).

Application configuration data (%KW, timer preset, counter preset, communication port parameters) can be modified in on-line mode (PC connected to the Twido base controller).

Macros for Modbus network or CANopen bus

In order to make programming easier, a system of macros simplifies writing of the program and improves understanding of the code. This system is presented according to different families of equipment: generic equipment, variable speed drives or motor starters.

For each family, a list of macros is suggested to facilitate exchanges between the Twido programmable controller and a device connected to a Modbus network or to a CANopen bus. These macros are in the form of configurable families to describe the network characteristics of the device involved (Modbus network or CANopen bus, slave address, etc.). The instances thus configured can be run within the program. For each macro, symbols for objects used can be generated automatically in order to provide further assistance in terms of readability of the application. For each macro inserted in the program, TwidoSoft software automatically generates code in instruction List language, encapsulated in a subroutine. The macro's code call line is compiled by the TwidoSoft software by calling a subroutine.

After calling up a macro, the code generated in instruction List language can be displayed. No modifications to the content of subroutines generated in this way are allowed.

This macro system requires a version of TwidoSoft software \geq V3.0 and a version \geq V3.0 of the Twido base controller micro-program.

Built-in functions for expandable controller versions \geq 2.0

PID

- 14 PID programming loops
- "Autotuning" algorithm (for software version \geq 2.5)
- Analog / PWM output
- Linear conversion of measuring input
- 2 alarm levels (high and low) on the "measurement"
- Command output limits
- Direct and inverse action
- 2 animated modes for PID: configuration mode, debugging mode

Event processing

- Event management by the application
- 2 priority levels
- 3 types of source:
 - 4 event sources based on the basic inputs
 - 4 event sources based on the very fast threshold counter (VFcounter)
 - 1 event source based on the periodic event (Timer)
- Command masked and enabled by the system bits
- Each event executes a single user logic subroutine
- Updating of "reflex" outputs

Software set-up for controller versions \geq 2.0

The AS-Interface cabling system is configured using TwidoSoft software. The services offered are based on the principle of simplicity:

- Management of profile tables, parameters and data by the master (management transparent to the user)
- Topological addressing of I/O: any AS-Interface slave defined on the cabling system has a topological address assigned to it on the cabling system, in a way that is transparent to the user
- Each AS-Interface module sensor/actuator is seen by Twido in the same way as any I/O

Configuration of the AS-Interface cabling system

Configuration of all the modules present on the AS-Interface cabling system is carried out by following the on-screen instructions:

Definition of the AS-Interface cabling system master module

Module TWD NOI 10M3 is defined like any I/O module.

Configuration of AS-Interface slave modules

From the definition screen, it is possible to configure all the slave modules corresponding to all the I/O of the interfaces present on the AS-Interface cabling system.

The user selects the reference of the AS-Interface module shown in the Schneider Electric catalog, among the various discrete, analog or safety modules. This selection automatically determines the AS-Interface profile and parameters associated with each interface module.

After configuration, the I/O connected to the AS-Interface cabling system are processed by the application program in the same way as any of the PLCs "In-rack" I/O, either by their address (e.g. %I4.0/16.2, input 2 of slave 16 on the AS-Interface cabling system), or by their associated symbol (e.g. Start_conveyor).

Integrated counter function

The counter function allows the controller to count a large number of pulses, within one program scan cycle. Using its integrated 16-bit fast counters, Twido can count up to 65 535 pulses generated by ± 24 V sensors. (With 32 bit counters, up to 4 294 967 295 pulses, for software version ≥ 2.5). It can compare the current counter value with a preset value and trigger an output when the preset value is reached. This type of counter function can be used for counting parts or events, or for measuring length or position.

The number of integrated fast-counters depends on the type of base controller:

Base controller type	Compact LC●A 10/12/24 DRF	Modular LMDA 20●K/20DRT/40●K
Counter VFC (20 kHz)	1	2
Counter FC (5 kHz)	3	2

Very fast counter - VFC (20 kHz)

The 20 kHz VFC (Very Fast Counter) is an up/down counter with possibility of auxiliary inputs. The counter is accessed by means of a function block (%VFCi) programmed using TwidoSoft. The %VFCi function block can be used to execute one of the following 5 functions, all with a maximum frequency of 20 kHz:

- Up/Down counter
- Up/Down counter with detection of running direction
- Single Up counter
- Single Down counter
- Frequency meter

The pulses to be counted may come from an incremental encoder or from 2 proximity sensors (up/down counting) connected to inputs I0 and I1 of Twido base controllers.

Fast counter - FC (5 kHz)

The fast counter is available for up or down counting of pulses (rising edges) on the discrete inputs of Twido base controllers, at a maximum frequency of 5 kHz. The Up and Down counters are accessed by means of a function block (%FCi) programmed using TwidoSoft. Using the configuration editor, the user must select either Up or Down counting mode for each function block, define the initial value of the preset %FCi.P (1...65 535), (1...4 294 967 295 for software version ≥ 2.5) and select the attribute "adjustable" in order to be able to dynamically change the preset value %FCi.P and the current value %FCi.V.

Within function block %FCi, the current value %FCi.V varies by:

- Incrementing the value 0 to the preset value %FCi.P in counter mode
- Decrementing the preset value %FCi.P to 0 in down counter mode.

Positioning

Twido modular controllers include two positioning functions (frequency 7 kHz) which can be used, for example, for controlling step motors:

- Function PLS (pulse) - pulse generator output
- Function PWM - pulse width modulation output. This function can also be used for applications with light or sound intensity control (controller function).

PLS function (pulse, 7 kHz)

The PLS function block generates pulses of fixed ratio. In some cases, the frequency can be fixed and in others it is variable (as in control of slopes when driving step motors). The %PLS function block can be programmed to generate a specific number of pulses.

%PLS function blocks are assigned to outputs %Q0.0.0 or %Q0.0.1 on modular base controllers.

The pulse generator signal has a variable period, but with a constant duty cycle which establishes an ON to OFF ratio of 50 % of the period (see illustration opposite).

PWM function (7 kHz)

The PWM function block generates pulses of fixed frequency, with a variable ratio between the high state and low state of the output signal. The ON to OFF duration ratio is a dynamic variable called %PWM.R, with a range from 0 % to 100 %.

PWM function blocks are assigned to outputs %Q0.0.0 or %Q0.0.1 on a base controller. The PWM function can be used to control analog module outputs.

The user-defined %PWM function block generates a signal on output %Q0.0.0 or %Q0.0.1 of modular base controllers (see illustration opposite).

Example of TwidoAdjust software screen

Presentation

TwidoAdjust is a software tool dedicated to the management and animation of Twido applications, using a Pocket PC.

The Pocket PC with TwidoAdjust software package can be connected to a Twido programmable controller:

- either using TSX PCX 1031 and TSX PCX 1130 connection cables (ensuring crossing of the Rx and Tx wires)
- or using Bluetooth wireless technology. For optimum performance, use a Pocket PC with integrated Bluetooth technology.

TwidoAdjust software requires a Pocket PC with Pocket PC2003 operating system and must be used with the stylus, since the Pocket PC buttons are not supported.

TwidoAdjust software is used to manage a project and allows:

- the transfer of applications
- animation and back-up of object tables
- back-up of object category values

From the very first screen, TwidoAdjust software offers the possibility of displaying essential controller data, such as its reference, its status, the name of the application and version of its firmware.

Functions

The functions offered by TwidoAdjust software are split into three groups:

Connection

The connection function establishes communication between the TwidoAdjust software and the Twido programmable controller and allows disconnection and access to basic data such as references, controller status and name of the application.

Application

The application function includes the following functions:

- **transfer**, such as transfer of the application, reading of an application, “backup”, “restore”
- **animation of object tables**, creation, editing, table animation, capture of values
- **reading the configuration** of the application

System

The system function makes it possible to display the physical configuration of the controller, set the RTC function clock and update the PLC's microprogram.

The operation of TwidoAdjust software can also be customized via the “Action” and “Preferences” menus. Other types of customization are offered, such as adding shortcuts, choice of default communication port, and opening of latest project.

References

The multi-language software packages (English, French, German, Italian and Spanish) are for use on Pocket PCs with Pocket PC2003 operating system.

These software packages include:

- a CD-ROM containing TwidoAdjust multi-language software and multi-language documentation for hardware and software set-up
- depending on the model, Bluetooth gateway VW3 A8114 ▲

Twido programmable controller

Community regulations

Protective treatment of equipment

Community regulations

European Directives

Opening up of European markets assumes harmonisation of the regulations pertaining to each of the member countries of the European Union.

The purpose of the European Directive is to eliminate obstacles hindering the free circulation of goods within the European Union, and it applies to each member country.

Member countries are obliged to transcribe each Directive into their national legislation and to simultaneously withdraw any contradictory regulations.

The Directives, in particular those of a technical nature which concern us, only establish the objectives to be achieved, referred to as "essential requirements".

The manufacturer must take all the necessary measures to ensure that his products conform to the requirements of each Directive applicable to his production.

As a general rule, the manufacturer certifies conformity to the essential requirements of the Directive(s) for his product by affixing the C€ mark.

The C€ mark is affixed to our products concerned.

Significance of the C€ mark

- The C€ mark affixed to a product signifies that the manufacturer certifies that the product conforms to the relevant European Directive(s) which concern him; this condition must be met to allow marketing and free circulation within the countries of the European Union of any product subject to one or more of the E.U. Directives.
- The C€ mark is intended solely for national market control authorities.

For electrical equipment, only conformity to standards signifies that the product is suitable for its designed function. Only the guarantee of an established manufacturer can provide a high level of quality assurance.

For our products, one or several Directives are likely to be applicable, depending on the product, and in particular:

- The Low Voltage Directive 72/23/EEC amended by Directive 93/68/EEC: under the terms of this Directive, C€ marking could not be applied before 1st January 1995 and has been compulsory since 1st January 1997.
- The Electromagnetic Compatibility Directive 89/336/EEC, amended by Directives 92/31/EEC and 93/68/EEC: the C€ mark on products covered by this Directive has been compulsory since 1st January 1996.

Protective treatment of equipment

Twido programmable controllers meet the requirements of "TC" treatment (1).

For installations in industrial production workshops or in an environment which corresponds to "TH" treatment (2), Twido programmable controllers should be enclosed in casings with a minimum of IP 54 protection as defined by standards IEC 60950 or NEMA 250.

Twido programmable controllers are supplied with an IP 20 protection index. They can therefore be installed without an enclosure in locations with restricted access which do not exceed degree of pollution 2 (control room not containing machinery or dust producing activities).

(1) "TC" treatment: all climate treatment.

(2) "TH" treatment: treatment for hot and humid environments.

The efficiency of Telemecanique branded *solutions*

Used in combination, Telemecanique products provide quality solutions, meeting all your **Automation & Control** applications requirements.

A **worldwide** presence

Constantly available

- More than 5,000 points of sale in 130 countries.
- You can be sure to find the range of products that are right for you and which complies fully with the standards in the country where they are used.

Technical assistance wherever you are

- Our technicians are at your disposal to assist you in finding the optimum solution for your particular needs.
- Schneider Electric provides you with all necessary technical assistance, throughout the world.
