SG6521 — PC Power Supply Supervisors

Features

- Two 12V Sense Input Pins: VS12 and VS12B
- Over-Voltage Protection (OVP) for 3.3V, 5V, and two 12V
- Over-Current Protection (OCP) for 3.3V, 5V, and two 12V
- Under-Voltage Protection (UVP) for 3.3V, 5V, and two 12V
- Open-Drain Output for PGO and FPO Pins
- 300ms Power-Good Delay
- 2.8ms PSON Control to FPO Turn-off Delay
- 48ms PSON Control Delay
- No Lock-up During the Fast AC Power On/Off
- Wide Supply Voltage Range: 4V to 15V
- Over-Temperature Protection (OTP)
- Additional Protection Input (Pext)

Applications

- Switch-Mode Power Supplies with Active PFC
- Servo System Power Supplies
- PC-ATX Power Supplies

Description

The SG6521 is designed to provide the supply voltage, current supervisor, remote on/off (PSON), power good (PGO) indicator, and fault protection (FPO) functions for switching power systems.

For supervisory functions, it provides the over-voltage protection (OVP) for 3.3V, 5V, and two 12V; over-current protection (OCP) for 3.3V, 5V, and two 12V; under-voltage protection (UVP) for 3.3V, 5V, and two 12V. When 3.3V, 5V, or 12V voltage decreases to 2.3V, 3.5V, and 9V, respectively, the under-voltage protection function is enabled. FPO is set HIGH to turn off the PWM controller IC. The voltage difference across external current shunt is used for OCP functions. An external resistor can be used to adjust protection threshold. An additional protection input pin provides the flexibility for designing protection circuits.

The power supply is turned on after a 48ms delay when PSON signal is set from HIGH to LOW. To turn off the power supply, the PSON signal is set from LOW to HIGH with a delay of 48ms. The PGI circuitry provides a power-down warning signal for PGO. When PGI input is lower than the internal 1.25V reference voltage, PGO signal is pulled LOW.

Ordering Information

Part Number	Operating Temperature Range	Eco Status	Package	Packing Method
SG6521DZ	-40°C to +85°C	RoHS	16-pin Dual In-Line Package (DIP)	Rail
SG6521SZ	-40°C to +85°C	RoHS	16-pin Small Outline Package (SOP)	Tape & Reel

For Fairchild's definition of "green" Eco Status, please visit: http://www.fairchildsemi.com/company/green/rohs_green.html.

Application Diagram

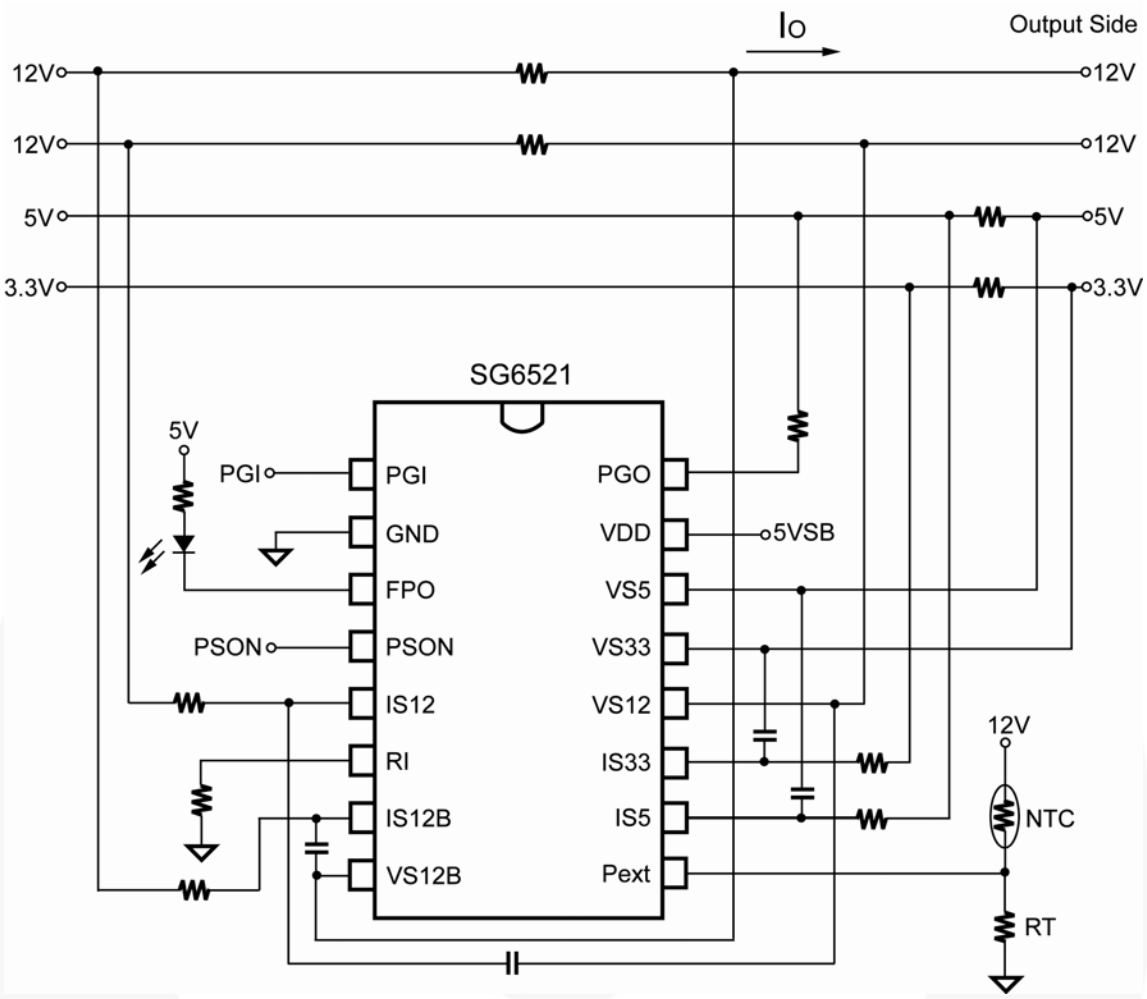

Figure 1. Typical Application

Block Diagram

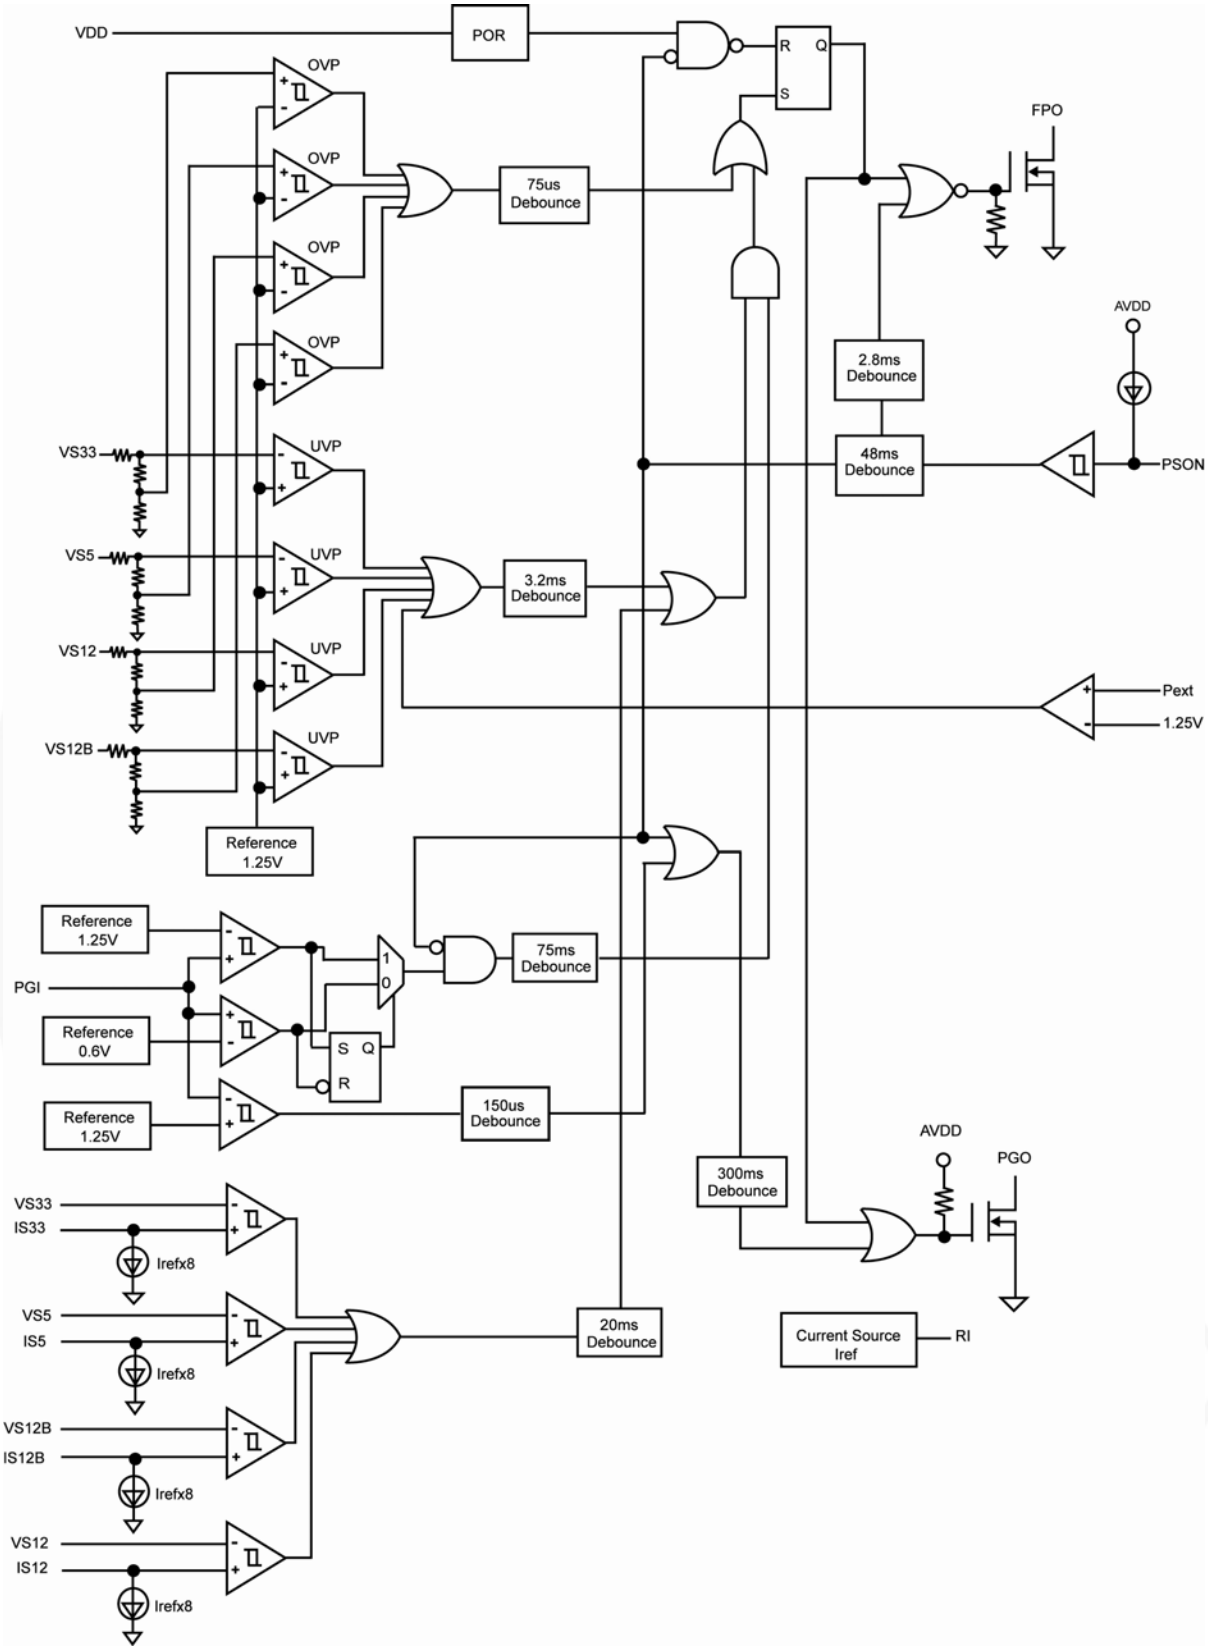

Figure 2. Function Block Diagram

Pin Configuration

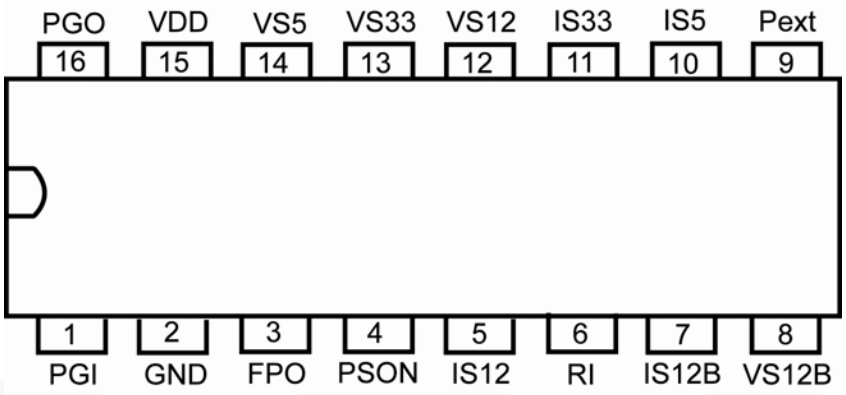

Figure 3. Pin Configuration(Top View)

Pin Definitions

Pin #	Name	Description
1	PGI	**Power Good Input**. For ATX SMPS, it detects AC line voltage through the main transformer.
2	GND	**Ground**.
3	FPO	**Fault Protection Output**. Output signal to control the primary PWM IC through an opto-coupler. When FPO is low, the PWM IC is enabled.
4	PSON	**Remote On/Off Logic Input from CPU or Main Board**. The power supply is turned on/off after a 48ms delay.
5	IS12	**12V Over-Current Protection Sense Input**. For typical applications, this pin is connected to the positive end of a current shunt through one resistor. When the voltage on IS12 is higher than that of VS12 by 5mV, OCP is enabled.
6	RI	**Reference Setting**. One external resistor RI connected between the RI and GND pins determines a reference current, I_{REF} = 1.25/R_I, for OCP programming.
7	IS12B	**12V Over-Current Protection Sense Input**. For typical application, this pin is connected to the positive end of a current shunt through one resistor. When the voltage on IS12 is higher than that of VS12 by 5mV, OCP is enabled.
8	VS12B	**Second 12V Over/Under-Voltage Control Sense Input**.
9	Pext	**External Protection Detects Input**.
10	IS5	**5V Over-Current Protection Sense Input**.
11	IS33	**3.3V Over-Current Protection Sense Input**.
12	VS12	**12V Over/Under-Voltage Control Sense Input**.
13	VS33	**3.3V Over/Under-Voltage Control Sense Input**.
14	VS5	**5V Over/Under-Voltage Control Sense Input**.
15	VDD	**Supply Voltage**. 4.2V ~ 15V. For ATX SMPS, it is connected to 5V-standby and 12V through diodes, respectively.
16	PGO	**Power-Good Logic Output**. 0 or 1 (open-drain). Power good=1 means that the power supply is good for operation. The power good delay is 300ms.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter			Min.	Max.	Unit
V_{DD}	DC Supply Voltage				16	V
V_{IN}	Input Voltage	PSON, PGI, VS5, IS5, VS33, IS33, Pext		-0.3	7.0	V
		VS12, VS12B, IS12, IS12B		-0.3	15.0	V
V_{OUT}	Output Voltage	FPO, PGO		-0.3	8.0	V
T_J	Operating Junction Temperature			-40	+125	°C
T_{STG}	Storage Temperature Range			-55	+150	°C
T_L	Lead Temperature (Soldering)				+260	°C
ESD	Electrostatic Discharge Capability		Human Body Model: JESD22-A114		3.0	KV
			Machine Model: JESD22-A115		200	V

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Typ.	Max.	Unit
T_A	Operating Ambient Temperature	-40		+85	°C

Electrical Characteristics

V_{DD} = 5V, and T_A = 25°C unless otherwise noted.

t_{Pext}	Pext Delay Time		2.4	3.2	4.0	ms

Functional Description

The SG6521 is designed to provide the supply voltage, current supervisor, remote on/off (PSON), power-good (PGO) indicator, and fault protection (FPO) functions for switching power systems.

For supervisory functions, it provides the over-voltage protection (OVP) for 3.3V, 5V, and two 12V; over-current protection (OCP) for 3.3V, 5V, and two 12V; under-voltage protection (UVP) for 3.3V, 5V, and two 12V. When 3.3V, 5V, or 12V voltage decreases to 2.3V, 3.5V, and 9V, respectively, the under-voltage protection function is enabled. FPO is set HIGH to turn off the PWM controller IC. The voltage difference across external current shunt is used for OCP functions. An external resistor can be used to adjust protection threshold. An additional protection input pin provides the flexibility for designing protection circuits.

The power supply is turned on after a 48ms delay when PSON signal is set from HIGH to LOW. To turn off the power supply, the PSON signal is set from LOW to HIGH with a delay of 48ms. The PGI circuitry provides a power-down warning signal for PGO. When PGI input is lower than the internal 1.25V reference voltage, PGO signal is pulled LOW.

The SG6521 provides over-current protection for the 3.3V, 5V, and two 12V rails. Whenever an OCP condition occurs at any of the voltage rails, PGO is LOW and FPO is open. The internal OCP comparators have a very small offset voltage (±3mV). The sink currents of IS33, IS5, and IS12 are eight times the current at the RI pin. The current at the RI pin is V_{RI}/R_I.

Here is an example demonstrating how to set the over current protection. If $I_1 \times R_1 > I_{RI} \times R2$, OCP is active. If R_1=5mΩ, R_I=30KΩ, and the OCP active level is 35A, then the R_2 resistor is:

$$R_2 = \frac{I_1 \times R_1}{I_{RI} \times 8} = 525\Omega \quad (1)$$

where C is bypass noise, suggested value is between 1μF ~ 2.2μF

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
