CircuitWorks® Epoxy Overcoat

Product# CW2500

Product Description

CircuitWorks Epoxy Overcoat is a two component, 100% solids, high temperature resistant, permanent epoxy coating for electronics circuit and component protection. When properly cured, CircuitWorks Epoxy Overcoat yields a chemically inert film which prevents the effects of corrosion, moisture, oxidation, abrasion, and thermal shock. The cured film can withstand brief exposure to high temperatures up to 600°F (316°C).

- Provides a hard, durable, protective coating
- Protects against moisture and abrasion
- Outstanding high temperature resistance
- Excellent dielectric properties; helps prevent electrical discharge
- Ideal for pre-reflow solder resist repair
- Meets the requirements of IPC-7721, 2.4.1

Typical Applications

CircuitWorks Epoxy Overcoat may be used for electronics applications in:

- Circuit board manufacturing
- Data communications
- Aerospace
- Instrumentation
- Controls
- General maintenance and repair

CHEMICAL RESISTANCE

CircuitWorks Epoxy Overcoat has excellent resistance to water based cleaners and most organic solvents.

Typical Product Data and Physical Properties

COMPOSITION:	
Material:	Two part epoxy coating
Color:	Epoxy: transparent green Hardener: amber
Solids:	100%
Viscosity:	11,000 cps
(Brookfield RVT, spindle #7,	20 rpm, 77°F / 25°C)
CURED COMPOUND:	
Service Temperature:	-55 to 192°F (-48 to 89°C)
Short Term Exposure:	<u><</u> 600°F (1 minute)
Tack Free:	30 minutes
Pot Life:	15-20 minutes 10-15 minutes @ 212ºF (100ºC)
Cure Schedule:	24 hours @ 77°F (25°C)
Dielectric Breakdown:	>400 volts/mil DC
Insulation Resistance:	>1 x 10 ⁴
Shelflife	12 months @ 77°F (25°C)
RoHS Compliant	Yes

CircuitWorks® Epoxy Overcoat

Product# CW2500

Compatibility

CircuitWorks Epoxy Overcoat is generally compatible with materials used in printed circuit board fabrication. As with any production material, compatibility with substrate should be determined on a non-critical area prior to use.

Usage Instructions

For industrial use only. Read SDS carefully prior to use.

Surface Preparation: For best adhesion, clean the area with Electro-Wash PX precision cleaner to remove any surface contamination.

Mixing: Mix equal amounts (1:1) by volume of Part A and Part B. Mix thoroughly for one minute.

Application: Use brush or pick to apply epoxy. Pot life is 15-20 minutes at room temperature.

Curing: Tack free time is 30 minutes at room temperature. Excellent results have been obtained by curing for 10 minutes @ 100°C. Optimum cure cycles using radiant or convection conveyer ovens are best determined experimentally. Product may also be cured for 24 hours @ 77°F (25°C).

Clean-Up/Removal (uncured): Use isopropanol, acetate, or MEK to clean-up uncured resin. Cured Epoxy Overcoat cannot be removed using solvents.

Availability

CW2500	Total:	7.4 g (0.26 oz)
	Part A	4g (0.14 oz) Adhesive
	Part B	3.4g (0.12 oz) Hardener

Environmental Impact Data

ODP	None
HCFC	None
VOC	None
HFC	None
	None

Ozone depletion potential (ODP) is determined in accordance with the Montreal Protocol and U.S. Clean Air Act of 1990. Hydrochlorofluorocarbons (HCFCs) are regulated under the Montreal Protocol as Class II ozone depleting substances. Volatile Organic Compound (VOC) information is calculated on a weight basis using the VOC definition of California Air Resources Board (CARB) Consumer Product Regulations, South Coast Air Quality Management District (SCAQMD) Rule 102 and the Federal definition published in 40 CFR 51.100(s). Hydrofluorocarbons (HFCs) are not currently regulated.
