Dual 1:2 Low Additive Jitter LVDS Buffer

Check for Samples: CDCLVD2102

FEATURES

- **Dual 1:2 Differential Buffer**
- **Low Additive Jitter <300 fs RMS in 10-kHz to 20-MHz**
- **Low Within Bank Output Skew of 15 ps (Max)**
- **Universal Inputs Accept LVDS, LVPECL, LVCMOS**
- **One Input Dedicated for Two Outputs**
- **Total of 4 LVDS Outputs, ANSI EIA/TIA-644A Standard Compatible**
- **Clock Frequency up to 800 MHz**
- **2.375–2.625V Device Power Supply**
- **LVDS Reference Voltage, V_{AC_REF}, Available for Capacitive Coupled Inputs**
- **Industrial Temperature Range –40°C to 85°C**
- **Packaged in 3mm × 3mm 16-Pin QFN (RGT)**
- **ESD Protection Exceeds 3 kV HBM, 1 kV CDM**

APPLICATIONS

- **Telecommunications/Networking**
- **Medical Imaging**
- **Test and Measurement Equipment**
- **Wireless Communications**
- **General Purpose Clocking**

DESCRIPTION

The CDCLVD2102 clock buffer distributes two clock inputs (IN0, IN1) to a total of 4 pairs of differential LVDS clock outputs (OUT0, OUT3). Each buffer block consists of one input and 2 LVDS outputs. The inputs can either be LVDS, LVPECL, or LVCMOS.

The CDCLVD2102 is specifically designed for driving 50-Ω transmission lines. If driving the inputs in single ended mode, the appropriate bias voltage (V_{AC_REF}) should be applied to the unused negative input pin.

Using the control pin (EN), outputs can be either disabled or enabled. If the EN pin is left open two buffers with all outputs are enabled, if switched to a logical "0" both buffers with all outputs are disabled (static logical "0"), if switched to a logical "1", one buffer with two outputs is disabled and another buffer with two outputs is enabled. The part supports a fail safe function. It incorporates an input hysteresis, which prevents random oscillation of the outputs in absence of an input signal.

The device operates in 2.5V supply environment and is characterized from –40°C to 85°C (ambient temperature). The CDCLVD2102 is packaged in small 16-pin, 3-mm × 3-mm QFN package.

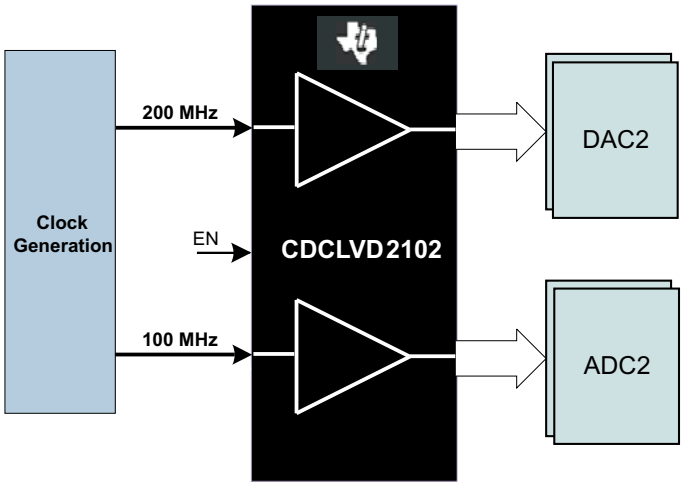

Figure 1. Application Example

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

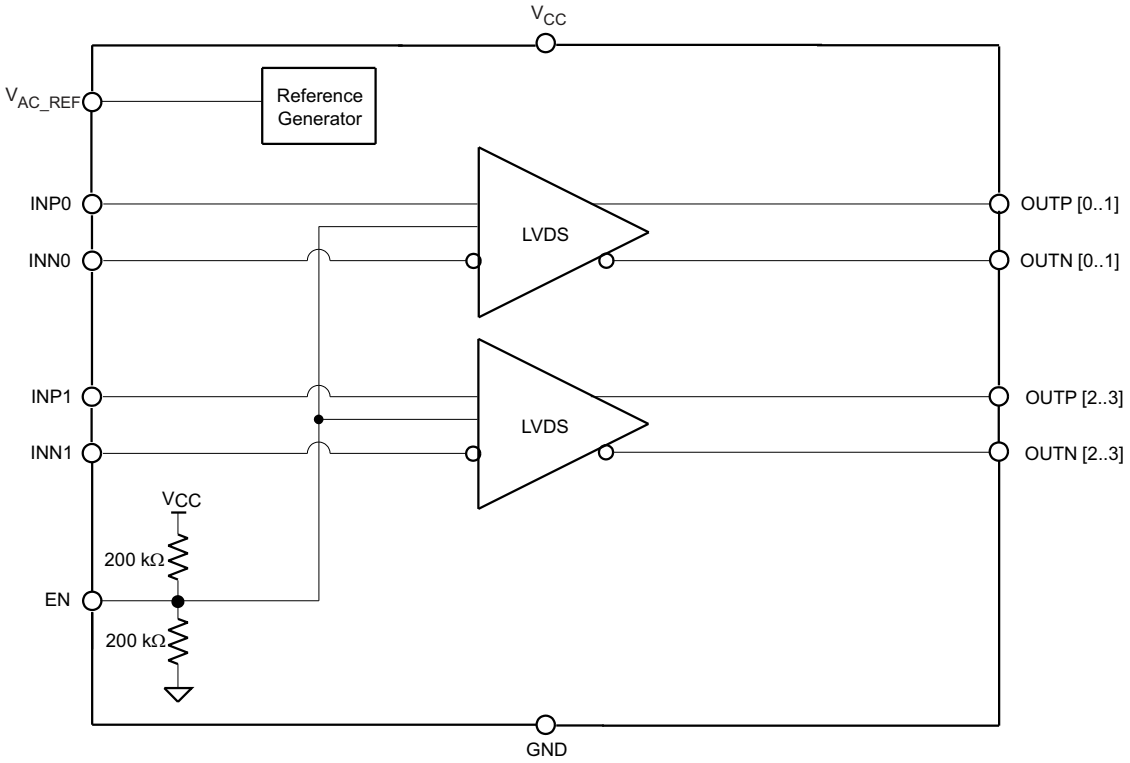

Figure 2. CDCLVD2102 Block Diagram

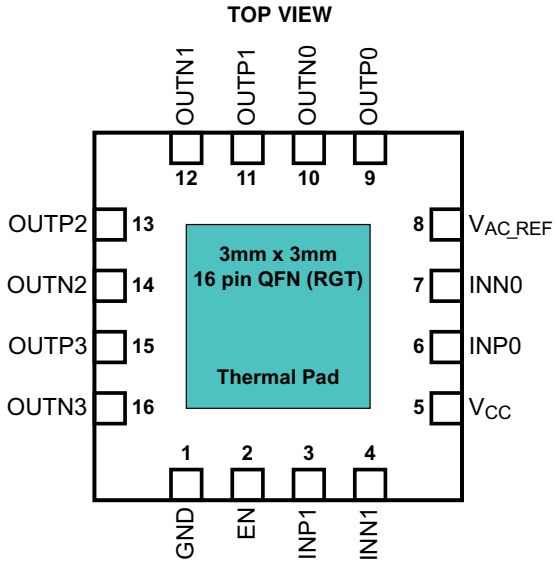

PIN FUNCTIONS

PIN		TYPE	DESCRIPTION	
NAME	NO.			
VCC	5	Power	2.5V supplies for the device	
GND	1	Ground	Device ground	
INP0, INN0	6, 7	Input	Differential input pair or single ended input	
INP1, INN1	3, 4	Input	Differential redundant input pair or single ended input	
V_{AC_REF}	8	Output	Bias voltage output for capacitive coupled inputs. If used, it is recommended to use a 0.1µF to GND on this pin	
OUTP0, OUTN0	9, 10	Output	Differential LVDS output pair no. 0	INP0/INN0 is the input
OUTP1, OUTN1	11, 12	Output	Differential LVDS output pair no. 1	
OUTP2, OUTN2	13, 14	Output	Differential LVDS output pair no. 2	INP1/INN1 is the input
OUTP3, OUTN3	15, 16	Output	Differential LVDS output pair no. 3	
EN	2	Input with internal 200kΩ pull-up and pull-down	Control pin – enables or disables the outputs, (See Table 1)	
Thermal Pad			See thermal management recommendations	

Table 1. Output Control Table

EN	CLOCK OUTPUTS
0	All outputs disabled (static "0")
OPEN	All outputs enabled
1	OUT0, OUT1 enabled and OUT2, OUT3 disabled (static "0")

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted)(1)

	VALUE / UNIT
Supply voltage range, V_{CC}	–0.3 to 2.8 V
Input voltage, V_I	–0.2 to (V_{CC} + 0.2) V
Output voltage range, V_O	–0.2 to (V_{CC} + 0.2) V
Driver short circuit current, I_{OSD}	See Note (2)
Electrostatic discharge (HBM, 1.5 kΩ, 100 pF)	>3000 V

(1) Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions” is not implied. Exposure to absolute–maximum–rated conditions for extended periods may affect device reliability.
(2) The outputs can handle permanent short.

RECOMMENDED OPERATING CONDITIONS

	MIN	TYP	MAX	UNITS
Device supply voltage, V_{CC}	2.375	2.5	2.625	V
Ambient temperature, T_A	–40		85	oC

THERMAL INFORMATION

THERMAL METRIC(1)		CDCLVD2102 RGT 16 PINS	UNITS
θ_{JA}	Junction-to-ambient thermal resistance	51.3	°C/W
$\theta_{JC(top)}$	Junction-to-case(top) thermal resistance	85.4	
θ_{JB}	Junction-to-board thermal resistance	20.1	
ψ_{JT}	Junction-to-top characterization parameter	1.3	
ψ_{JB}	Junction-to-board characterization parameter	19.4	
$\theta_{JC(bottom)}$	Junction-to-case(bottom) thermal resistance	6

APPLICATION INFORMATION

THERMAL MANAGEMENT

For reliability and performance reasons, the die temperature should be limited to a maximum of 125°C.

The device package has an exposed pad that provides the primary heat removal path to the printed circuit board (PCB). To maximize the heat dissipation from the package, a thermal landing pattern including multiple vias to a ground plane must be incorporated into the PCB within the footprint of the package. The Thermal Pad must be soldered down to ensure adequate heat conduction to of the package. Figure 12 shows a recommended land and via pattern.

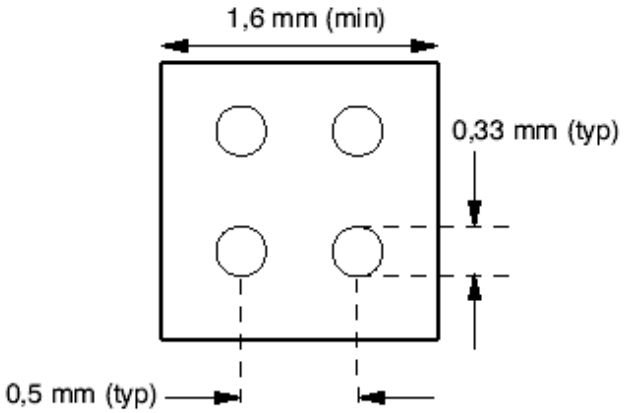

Figure 12. Recommended PCB Layout

POWER-SUPPLY FILTERING

High-performance clock buffers are sensitive to noise on the power supply, which can dramatically increase the additive jitter of the buffer. Thus, it is essential to reduce noise from the system power supply, especially when jitter/phase noise is critical to applications.

Filter capacitors are used to eliminate the low-frequency noise from the power supply, where the bypass capacitors provide the very low impedance path for high-frequency noise and guard the power-supply system against the induced fluctuations. These bypass capacitors also provide instantaneous current surges as required by the device and should have low equivalent series resistance (ESR). To properly use the bypass capacitors, they must be placed very close to the power-supply pins and laid out with short loops to minimize inductance. It is recommended to add as many high-frequency (for example, 0.1 μF) bypass capacitors as there are supply pins in the package. It is recommended, but not required, to insert a ferrite bead between the board power supply and the chip power supply that isolates the high-frequency switching noises generated by the clock driver; these beads prevent the switching noise from leaking into the board supply. Choose an appropriate ferrite bead with very low dc resistance because it is imperative to provide adequate isolation between the board supply and the chip supply, as well as to maintain a voltage at the supply pins that is greater than the minimum voltage required for proper operation.

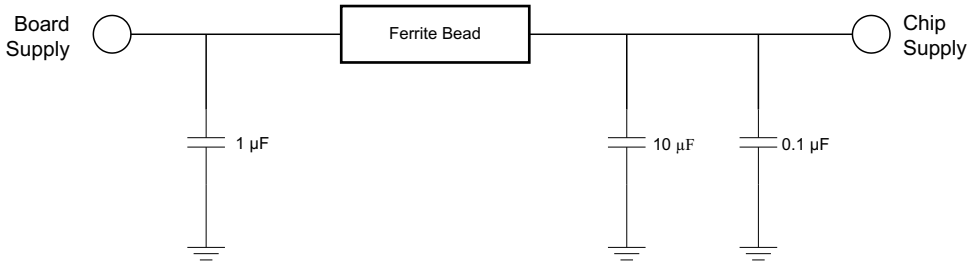

Figure 13. Power-Supply Decoupling

LVDS OUTPUT TERMINATION

The proper LVDS termination for signal integrity over two 50 Ω lines is 100 Ω between the outputs on the receiver end. Either dc-coupled termination or ac-coupled termination can be used for LVDS outputs. It is recommended to place termination resister close to the receiver. If the receiver is internally biased to a voltage different than the output common mode voltage of the CDCLVD2102, ac-coupling should be used. If the LVDS receiver has internal 100 ohm termination, external termination must be omitted.

Unused outputs can be left open without connecting any trace to the output pins.

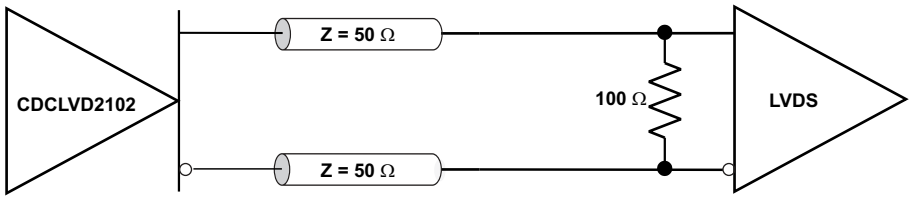

Figure 14. Output DC Termination

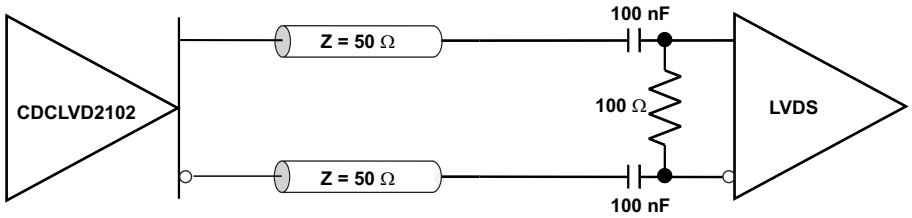

Figure 15. Output AC Termination With Receiver Internally Biased

INPUT TERMINATION

The CDCLVD2102 inputs can be interfaced with LVDS, LVPECL, or LVCMOS drivers.

LVDS Driver can be connected to CDCLVD2102 inputs with dc or ac coupling as shown Figure 16 and Figure 17, respectively.

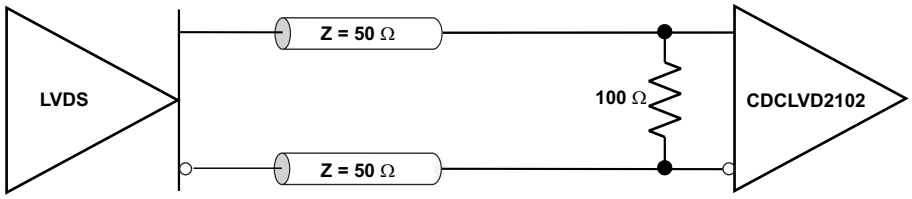

Figure 16. LVDS Clock Driver Connected to CDCLVD2102 Input (DC Coupled)

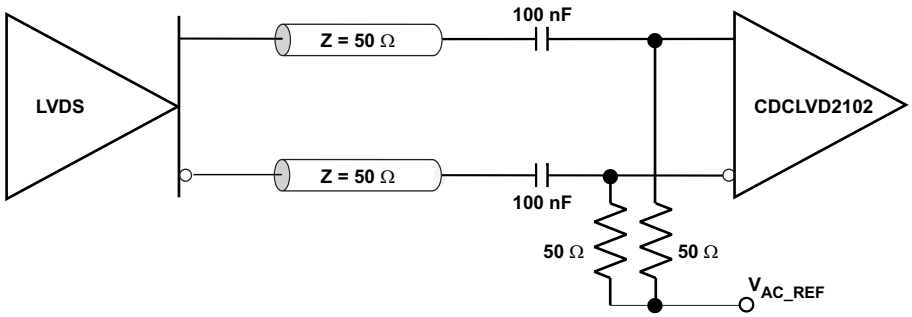

Figure 17. LVDS Clock Driver Connected to CDCLVD2102 Input (AC Coupled)

Figure 18 shows how to connect LVPECL inputs to the CDCLVD2102. The series resistors are required to reduce the LVPECL signal swing if the signal swing is >1.6 V_{PP}.

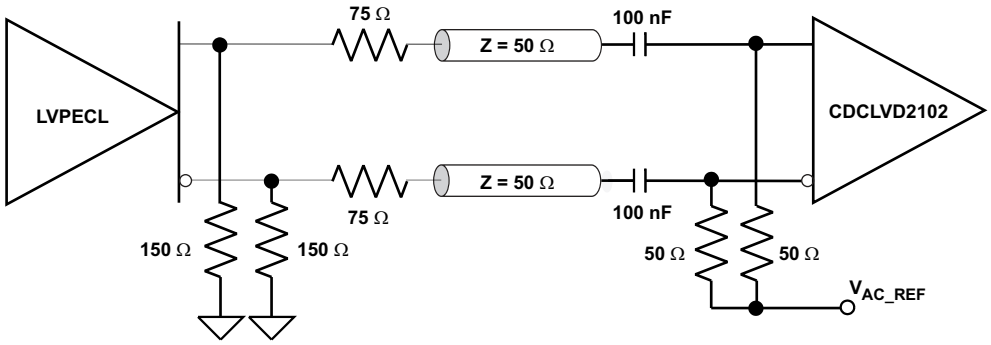

Figure 18. LVPECL Clock Driver Connected to CDCLVD2102 Input

Figure 19 illustrates how to couple a 2.5 V LVCMOS clock input to the CDCLVD2102 directly. The series resistance (R_S) should be placed close to the LVCMOS driver if needed. 3.3 V LVCMOS clock input swing needs to be limited to $V_{IH} \leq V_{CC}$.

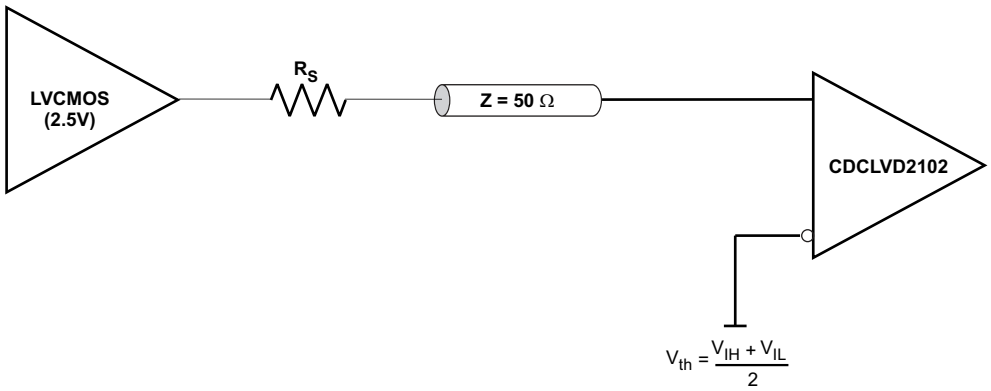

Figure 19. 2.5V LVCMOS Clock Driver Connected to CDCLVD2102 Input

If one of the buffers is used, then the other unused buffer should be disabled through the EN pin, and the unused input pins should be grounded by 1kΩ resistors.

REVISION HISTORY

Changes from Original (May 2010) to Revision A **Page**

- Changed Features bullet From: ESD Protection Exceeds 2kV HBM, 500V CDM To: ESD Protection Exceeds 3 kV HBM, 1 kV CDM 1
- Electrostatic discharge was <2000 3
- ΔV_{OD} values, MIN was-50, MAX was 50 5
- $V_{OC(SS)}$ MIN value was 1.125 5
- $\Delta V_{OC(SS)}$ values, MIN was-50, MAX was 50 5
- V_{ring} MAX value was 20% 5
- V_{OS} values, TYP was 30, MAX was 100 5
- t_{PD} MAX value was 2 5
- $t_{SK,\ PP}$ - deleted the TYP value of 300 5
- t_R/t_F MIN value was 200 5
- I_{CCSTAT} MAX value was 42 5
- Added new paragraph following Figure 19 12

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
CDCLVD2102RGTR	ACTIVE	VQFN	RGT	16	3000	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	D2102	Samples
CDCLVD2102RGTT	ACTIVE	VQFN	RGT	16	250	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	D2102	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
