Item description

This system supply module with bus power supply increases the capacity of the system supply for bus nodes with high current consumption (sum of the internal current consumption of the I/O modules) and enables the system supply of additional I/O modules with a maximum total current of 3900 mA (own current consumption of the system supply module already considered).

If required, additional system supply modules with bus power supply can be used.

The module also supplies field-side power to the adjacent I/O modules via power jumper contacts.

For field supply, the module transmits status information to the head-end station.
