

Low Duty LCD Segment Driver for Automotive application

BU91520KV-M

MAX 276 Segments (69SEG × 4COM)

General Description

The BU91520KV-M is 1/4 or 1/3 Duty General-purpose LCD driver. The BU91520KV-M can drive up to 276 LCD Segments directly. The BU91520KV-M can also control up to 6 General-purpose output pins / 6 PWM output pins. These products also incorporate a key scan circuit that accepts input from up to 30 keys to reduce printed circuit board wiring.

Features

- AEC-Q100 Qualified (Note 1)
- Key Input Function for up to 30 Keys (A key scan is performed only when a key is pressed.)
- Either 1/4 or 1/3 Duty can be Selected with the Serial Control Data.
 - 1/4 Duty Drive: up to 276 Segments
 - 1/3 Duty Drive: up to 207 Segments
- Selectable Display Frame Frequency for Common and Segment Output Waveforms.
- Configurable Output Pin to Segment Output / PWM Output / General-purpose Output. (Max 6 Pins)
- Built-in OSC Circuit
- The INHb Pin can Force the Display to the off State
- Integrated Voltage Detect Type Power on Reset (VDET) circuit
- No External Component
- Low Power Consumption Design
- Supports Line and Frame Inversion

(Note 1) Grade 2

Key Specifications

- Supply Voltage Range: +2.7V to +6.0V
- Operating Temperature Range: -40°C to +105°C
- Max Segments: 276 Segments
- Display Duty: 1/3, 1/4 Selectable
- Bias: 1/2, 1/3 Bias
- Interface: 3wire Serial Interface

Special Characteristics

- Electrostatic Discharge Voltage(HBM): ±2000V
- Latch-up Current: ±100mA

Package

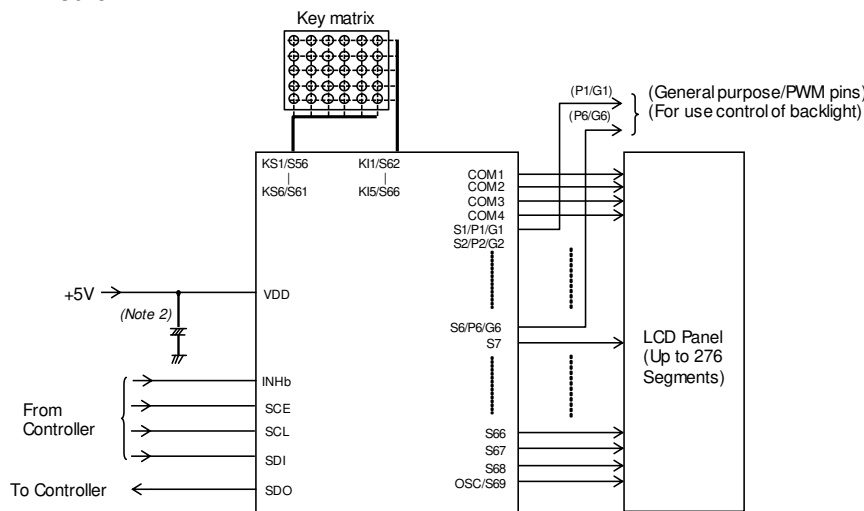

W(Typ) × D(Typ) × H(Max)

Applications

- Car Audio, Home Electrical Appliance, Meter Equipment etc.

Typical Application Circuit

(Note2) Insert capacitors between VDD and VSS C≥0.1μF

Figure 1. Typical Application Circuit

○Product structure : Silicon monolithic integrated circuit ○This product has no designed protection against radioactive rays

Block Diagram

Figure 2. Block Diagram

Pin Configuration

Figure 3. Pin Configuration (TOP VIEW)

Absolute Maximum Ratings (VSS = 0.0V)

Parameter	Symbol	Conditions	Rating	Unit
Maximum Supply Voltage	VDD	VDD	-0.3 to +7.0	V
Input Voltage	V _{IN1}	SCE, SCL, SDI, INHb, OSC	-0.3 to +7.0	V
	V _{IN2}	KI1 to KI5	-0.3 to +7.0	V
Allowable Loss	Pd	-	1.20(Notes)	W
Operating Temperature	Topr	-	-40 to +105	°C
Storage Temperature	Tstg	-	-55 to +125	°C

(Note) Derate by 12.0mW/°C when operating above Ta=25°C (when mounted in ROHM's standard board).

(Board size: 70mm×70mm×1.6mm material: FR4 board copper foil: land pattern only)

Caution1: Operating the IC over the absolute maximum ratings may damage the IC. The damage can either be a short circuit between pins or an open circuit between pins and the internal circuitry. Therefore, it is important to consider circuit protection measures, such as adding a fuse, in case the IC is operated over the absolute maximum ratings.

Caution2: Should by any chance the maximum junction temperature rating be exceeded the rise in temperature of the chip may result in deterioration of the properties of the chip. In case of exceeding this absolute maximum rating, design a PCB boards with power dissipation taken into consideration by increasing board size and copper area so as not to exceed the maximum junction temperature rating.

Recommended Operating Conditions (Ta = -40°C to +105°C, VSS = 0V)

Parameter	Symbol	Conditions	Rating			Unit
			Min	Typ	Max	
Supply Voltage	VDD	-	2.7	5.0	6.0	V

Electrical Characteristics (Ta = -40°C to +105°C, VDD = 2.7V to 6.0V, VSS = 0V)

Parameter	Symbol	Pin	Conditions	Limit			Unit
				Min	Typ	Max	
Hysteresis	V _{H1}	SCE, SCL, SDI, INHb, OSC	-	-	0.03VDD	-	V
	V _{H2}	KI1 to KI5	-	-	0.1VDD	-	V
Power-on Detection Voltage	V _{DET}	VDD	-	1.4	1.8	2.2	V
"H" Level Input Voltage	V _{IH1}	SCE, SCL, SDI, INHb, OSC	4.0V ≤ VDD ≤ 6.0V	0.4VDD	-	VDD	V
	V _{IH2}	SCE, SCL, SDI, INHb, OSC	2.7V ≤ VDD < 4.0V	0.8VDD	-	VDD	
	V _{IH3}	KI1 to KI5	-	0.7VDD	-	VDD	
"L" Level Input Voltage	V _{IL1}	SCE, SCL, SDI, INHb, OSC KI1 to KI5	-	0	-	0.2VDD	V
Input Floating Voltage	V _{IF}	KI1 to KI5	-	-	-	0.05VDD	V
Pull-down Resistance	R _{PD}	KI1 to KI5	VDD = 5.0V	50	100	250	kΩ
Output Off Leakage	I _{OFFH}	SDO	V _O = 6.0V	-	-	6.0	μA
"H" Level Input Current	I _{IH1}	SCE, SCL, SDI, INHb, OSC	V _I = 5.5V	-	-	5.0	μA
"L" Level Input Current	I _{IL1}	SCE, SCL, SDI, INHb, OSC	V _I = 0V	-5.0	-	-	μA
"H" Level Output Voltage	V _{OH1}	S1 to S69	I _O = -20μA	VDD-0.9	-	-	V
	V _{OH2}	COM1 to COM4	I _O = -100μA	VDD-0.9	-	-	
	V _{OH3}	P1/G1 to P6/G6	I _O = -1mA	VDD-0.9	-	-	
	V _{OH4}	KS1 to KS6	I _O = -500μA	VDD-1.0	VDD-0.5	VDD-0.2	
"L" Level Output Voltage	V _{OL1}	S1 to S69	I _O = 20μA	-	-	0.9	V
	V _{OL2}	COM1 to COM4	I _O = 100μA	-	-	0.9	
	V _{OL3}	P1/G1 to P6/G6	I _O = 1mA	-	-	0.9	
	V _{OL4}	KS1 to KS6	I _O = 25μA	0.2	0.5	1.5	
	V _{OL5}	SDO	I _O = 1mA	-	0.1	0.5	
Middle Level Output Voltage	V _{MID1}	S1 to S69	1/2 Bias	1/2VDD	-	1/2VDD	V
	V _{MID2}	COM1 to COM4	1/2 Bias I _O = ±100μA	1/2VDD -0.9	-	1/2VDD +0.9	
	V _{MID3}	S1 to S69	1/3 Bias I _O = ±20μA	2/3VDD -0.9	-	2/3VDD +0.9	
	V _{MID4}	S1 to S69	1/3 Bias I _O = ±20μA	1/3VDD -0.9	-	1/3VDD +0.9	
	V _{MID5}	COM1 to COM4	1/3 Bias I _O = ±100μA	2/3VDD -0.9	-	2/3VDD +0.9	
	V _{MID6}	COM1 to COM4	1/3 Bias I _O = ±100μA	1/3VDD -0.9	-	1/3VDD +0.9	
Current Consumption	I _{DD1}	VDD	Power-saving mode	-	-	15	μA
	I _{DD2}	VDD	VDD = 5.0V Output open, 1/2 Bias Frame frequency = 80Hz	-	85	170	
	I _{DD3}	VDD	VDD = 5.0V Output open, 1/3 Bias Frame frequency = 80Hz	-	110	210	

Oscillation Characteristics(Ta = -40°C to +105°C, VDD = 2.7V to 6.0V, VSS = 0V)

Parameter	Symbol	Pin	Conditions	Limit			Unit
				Min	Typ	Max	
Oscillator Frequency 1	fosc1	-	VDD = 2.7V to 6.0V	300	-	720	kHz
Oscillator Frequency 2	fosc2	-	VDD = 5V	510	600	690	kHz
External Clock Frequency (Note 1)	fosc3	OSC	External clock mode (OC=1)	30	-	1000	kHz
External Clock Rise Time	tr			-	160	-	ns
External Clock Fall Time	tf			-	160	-	ns
External Clock Duty	tDTY			30	50	70	%

(Note 1) Frame frequency is decided by external clock and dividing ratio of FC0, FC1, FC2 setting.

[Reference Data]

Figure 4. Oscillator Frequency Typical Temperature Characteristics

MPU Interface Characteristics (Ta = -40°C to +105°C, VDD = 2.7V to 6.0V, VSS = 0V)

Parameter	Symbol	Pin	Conditions	Limit			Unit
				Min	Typ	Max	
Data Setup Time	tDS	SCL, SDI	-	120	-	-	ns
Data Hold Time	tDH	SCL, SDI	-	120	-	-	ns
SCE Wait Time	tCP	SCE, SCL	-	120	-	-	ns
SCE Setup Time	tCS	SCE, SCL	-	120	-	-	ns
SCE Hold Time	tCH	SCE, SCL	-	120	-	-	ns
Clock Cycle Time	tCCYC	SCL	-	320	-	-	ns
High-level Clock Pulse Width	tCHW	SCL	-	120	-	-	ns
Low-Level Clock Pulse Width (Write)	tCLWW	SCL	-	120	-	-	ns
Low-Level Clock Pulse Width (Read)	tCLWR	SCL	RPU=4.7kΩ, CL=10pF (Note 2)	1.6	-	-	μs
Rise Time	tr	SCE, SCL, SDI	-	-	160	-	ns
Fall Time	tf	SCE, SCL, SDI	-	-	160	-	ns
INHb Switching Time	tC	INHb, SCE	-	10	-	-	μs
SDO Output Delay Time	tDC	SDO	RPU=4.7kΩ, CL=10pF (Note 2)	-	-	1.5	μs
SDO Rise Time	tDR	SDO	RPU=4.7kΩ, CL=10pF (Note 2)	-	-	1.5	μs

(Note 2) Since SDO is an open-drain output, "tbc" and "tbr" depend on the resistance of the pull-up resistor RPU and the load capacitance CL.

RPU: 1kΩ ≤ RPU ≤ 10kΩ is recommended.

CL: A parasitic capacitance to VSS in an application circuit. Any component is not necessary to be attached.

Power supply for I/O level

Pin Description

Pin	Pin No.	Function	Active	I/O	Handling when unused
S1/P1/G1 to S6/P6/G6	79,80, 1 to 4,	Segment output for displaying the display data transferred by serial data input. The S1/P1/G1 to S6/P6/G6 pins can also be used as General-purpose / PWM outputs when so set up by the control data.	-	O	OPEN
S7 to S55 S67,S68	5 to 53, 69,71	Segment output for displaying the display data transferred by serial data input.	-	O	OPEN
KS1/S56 to KS6/S61	54 to 59	Key scan outputs Although normal key scan timing lines require diodes to be inserted in the timing lines to prevent shorts, since these outputs are unbalanced CMOS transistor outputs, these outputs will not be damaged by shorting when these outputs are used to form a key matrix. The KS1/S56 to KS6/S61 pins can be used as segment outputs when so specified by the control data.	-	O	OPEN
KI1/S62 to KI5/S66	60 to 64	Key scan inputs These pins have built-in pull-down resistors. The KI1/S62 to KI5/S66 pins can be used as segment outputs when so specified by the control data.	-	I O	VSS OPEN
COM1 to COM4	65 to 68	Common driver output pins. The frame frequency is f_0 [Hz].	-	O	OPEN
OSC/S69	74	Segment output for displaying the display data transferred by serial data input. The pin OSC/S69 can be used as external clock input pin when set up by the control data.	-	I O	VSS OPEN
SCE SCL SDI	76 77 78	Serial data transfer inputs. Must be connected to the controller. SCE: Chip enable SCL: Clock for serial data transfer. SDI: Transfer data	H - -	I I I	VSS VSS VSS
SDO	72	Output data	-	O	OPEN

Pin Description – continued

Pin	Pin No.	Function	Active	I/O	Handling when unused
INHb ^(Note)	75	Display off control input. When INHb=low (VSS), Display forced off S1/P1/G1 to S6/P6/G6=low (VSS) S7 to S69=low (VSS) COM1 to COM4=low (VSS) Stop the LCD drive bias voltage generation divider resistors. Stop the internal oscillation circuit. When INHb=high (VDD), Display on However, serial data transfer is possible when the display is forced off.	L	I	VDD
VDD	70	Power supply pin. A supply voltage of 2.7V to 6.0V must be applied to this pin.	-	-	-
VSS	73	Power supply pin. Must be connected to Ground.	-	-	-

(Note) Regarding the details of the INHb pin and the control of each output, refer to "INHb Pin and Display Control"

When it is coincident with device code, BU91520KV-M capture display data and control data at falling edge of SCE. So, please transfer the bit number of send display data and control data as specified number in the above figure. Specified number of bits is 104bit (Device code: 8bit, Display data and Control data: 94bit, DD: 2bit).

Control Data Functions

1. KM0, KM1 and KM2: Key Scan output pin / Segment output pin switching control data

These control data bits switch the functions of the KS1/S56 to KS6/S61 output pins between key scan output and segment output.

KM0	KM1	KM2	Output Pin State						Maximum Number of Input keys	Reset Condition
			KS1/S56	KS2/S57	KS3/S58	KS4/S59	KS5/S60	KS6/S61		
0	0	0	KS1	KS2	KS3	KS4	KS5	KS6	30	-
0	0	1	S56	KS2	KS3	KS4	KS5	KS6	25	-
0	1	0	S56	S57	KS3	KS4	KS5	KS6	20	-
0	1	1	S56	S57	S58	KS4	KS5	KS6	15	-
1	0	0	S56	S57	S58	S59	KS5	KS6	10	-
1	0	1	S56	S57	S58	S59	S60	KS6	5	-
1	1	0	S56	S57	S58	S59	S60	S61	0	-
1	1	1	S56	S57	S58	S59	S60	S61	0	○

2. P0, P1, and P2: Segment / PWM / General-purpose output pin switching control data

These control data bits are used to select the function of the S1/P1/G1 to S6/P6/G6 output pins (Segment Output Pins or PWM Output Pins or General-purpose Output Pins).

P0	P1	P2	S1/P1/G1	S2/P2/G2	S3/P3/G3	S4/P4/G4	S5/P5/G5	S6/P6/G6	Reset Condition
0	0	0	S1	S2	S3	S4	S5	S6	○
0	0	1	P1/G1	S2	S3	S4	S5	S6	-
0	1	0	P1/G1	P2/G2	S3	S4	S5	S6	-
0	1	1	P1/G1	P2/G2	P3/G3	S4	S5	S6	-
1	0	0	P1/G1	P2/G2	P3/G3	P4/G4	S5	S6	-
1	0	1	P1/G1	P2/G2	P3/G3	P4/G4	P5/G5	S6	-
1	1	0	P1/G1	P2/G2	P3/G3	P4/G4	P5/G5	P6/G6	-
1	1	1	S1	S2	S3	S4	S5	S6	-

PWM output or General-purpose output pin is selected by PG_x (x=1 to 6) control data bit.

When the General-purpose Output Pin Function is selected, the correspondence between the output pins and the respective display data is given in the table below.

Output Pins	Corresponding Display Data	
	1/4 Duty Mode	1/3 Duty Mode
S1/P1/G1	D1	D1
S2/P2/G2	D5	D4
S3/P3/G3	D9	D7
S4/P4/G4	D13	D10
S5/P5/G5	D17	D13
S6/P6/G6	D21	D16

When the General-purpose Output Pin Function is selected, the respective output pin outputs a "HIGH" level when its corresponding display data is set to "1". Likewise, it will output a "LOW" level, if its corresponding display data is set to "0". For example, S4/P4/G4 is used as a General-purpose Output Pin in case of 1/4 Duty, if its corresponding display data D13 is set to "1", then S4/P4/G4 will output "HIGH(VDD)" level. Likewise, if D13 is set to "0", then S4/P4/G4 will output "LOW(VSS)" level.

3. DR: 1/3 Bias drive or 1/2 Bias drive switching control data

This control data bit selects either 1/3 Bias drive or 1/2 Bias drive.

DR	Bias Drive Scheme	Reset Condition
0	1/3 Bias drive	○
1	1/2 Bias drive	-

4. FL: Line Inversion or Frame Inversion switching control data

This control data bit selects either Line Inversion or Frame Inversion.

FL	Inversion Setting	Reset Condition
0	Line	○
1	Frame	-

Typically, when driving large capacitance LCD, Line inversion will increase the influence of crosstalk. Regarding driving waveform, refer to [LCD Driving Waveform](#)

Control Data Functions – continued

5. DT: 1/4 Duty drive or 1/3 Duty drive switching control data
This control data bit selects either 1/4 Duty drive or 1/3 Duty drive.

DT	Duty Drive Scheme	Reset Condition
0	1/4 Duty drive	○
1	1/3 Duty drive	-

6. FC0, FC1 and FC2: Common / Segment output waveform frame frequency switching control data
These control data bits set the display frame frequency.

FC0	FC1	FC2	Display Frame Frequency fo(Hz)	Reset Condition
0	0	0	$f_{osc}^{(Note)}/12288$	○
0	0	1	$f_{osc}/10752$	-
0	1	0	$f_{osc}/9216$	-
0	1	1	$f_{osc}/7680$	-
1	0	0	$f_{osc}/6144$	-
1	0	1	$f_{osc}/4608$	-
1	1	0	$f_{osc}/3840$	-
1	1	1	$f_{osc}/3072$	-

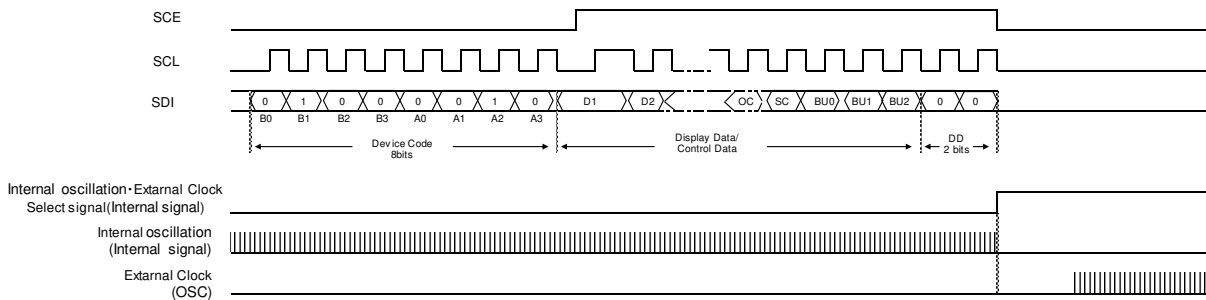

(Note) fosc: Internal oscillation frequency (600 kHz Typ)

7. OC: Internal oscillator operating mode / External clock operating mode switching control data
This control data bit selects the oscillation mode.

OC	Operating Mode	In/Out Pin(OSC/S69) Status	Reset Condition
0	Internal oscillator	S69 (segment output)	○
1	External Clock	OSC (clock input)	-

<External Clock input timing function>

Internal oscillation / external clock select signal behavior is below.
Please input external clock after serial data sending.

8. SC: Segment on/off control data
This control data bit controls the on/off state of the segments.

SC	Display State	Reset Condition
0	On	-
1	Off	○

Note that when the segments are turned off by setting SC to “1”, the segments are turned off by outputting segment off waveforms from the segment output pins.

9. BU, BU1 and BU2: Normal mode / power-saving mode control data
This control data bit selects either normal mode or power-saving mode.

BU0	BU1	BU2	Mode	OSC Oscillator	Segment Outputs Common Outputs	Output Pin States During Key Scan Standby						Reset Condition	
						KS1	KS2	KS3	KS4	KS5	KS6		
0	0	0	Normal	Operating	Operating	H	H	H	H	H	H	-	
0	0	1				L	L	L	L	L	H	H	-
0	1	0	Power-saving	Stopped	Low(VSS)	L	L	L	L	H	H	-	
0	1	1				L	L	L	H	H	H	H	-
1	0	0				L	L	H	H	H	H	H	-
1	0	1				L	H	H	H	H	H	H	-
1	1	0				H	H	H	H	H	H	H	-
1	1	1				H	H	H	H	H	H	○	

Power-saving mode status: S1/P1/G1 to S6/P6/G6=active only General-purpose output
S7 to S69=low(VSS)
COM1 to COM4=low(VSS)
Stop the LCD drive bias voltage generation circuit
Stop the Internal oscillation circuit
However, serial data transfer is possible.

Regarding the details of the INHb pin and the control of each output, refer to “[INHb Pin and Display Control](#)”.

Control Data Functions – continued

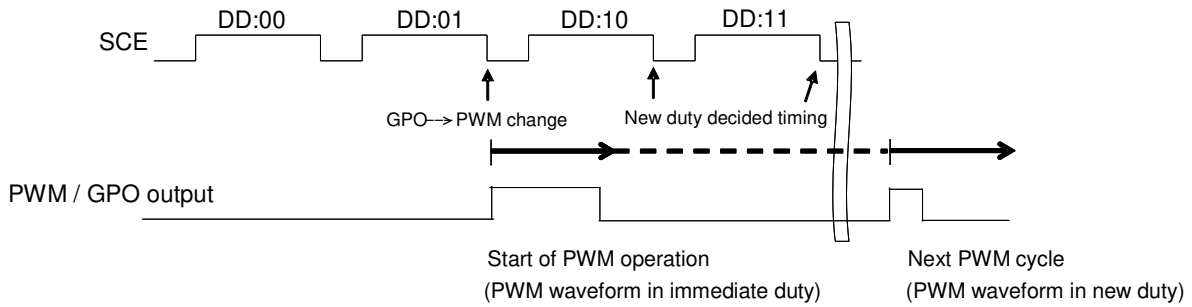

10. PG1, PG2, PG3, PG4, PG5 and PG6: PWM / General-purpose output control data
 This control data bit select either PWM output or General-purpose output of Sx/Px/Gx pins.(x=1 to 6)

PGx(x=1 to 6)	Mode	Reset Condition
0	PWM output	○
1	General-purpose output	-

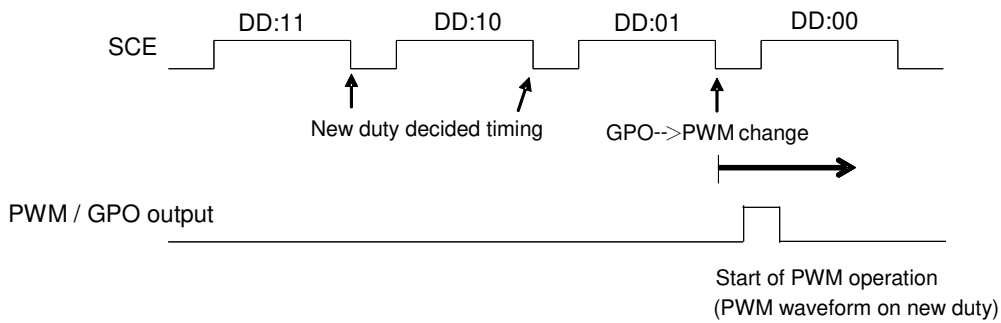

<PWM<->GPO Changing function>

Normal behavior of changing GPO to PWM is below.

- PWM operation is started by command import timing of DD:01 during GPO -> PWM change.
- Please take care of reflect timing of new duty setting of DD:10 and DD: 11 is from the next PWM.

In order to avoid this operation, please input commands in reverse as below

11. PF0, PF1, PF2 and PF3: PWM output waveform frame frequency control data
 These control data bits set the frame frequency for PWM output waveforms.

PF0	PF1	PF2	PF3	PWM output Frame Frequency fp(Hz)	Reset Condition
0	0	0	0	$f_{osc}/4096$	○
0	0	0	1	$f_{osc}/3840$	-
0	0	1	0	$f_{osc}/3584$	-
0	0	1	1	$f_{osc}/3328$	-
0	1	0	0	$f_{osc}/3072$	-
0	1	0	1	$f_{osc}/2816$	-
0	1	1	0	$f_{osc}/2560$	-
0	1	1	1	$f_{osc}/2304$	-
1	0	0	0	$f_{osc}/2048$	-
1	0	0	1	$f_{osc}/1792$	-
1	0	1	0	$f_{osc}/1536$	-
1	0	1	1	$f_{osc}/1280$	-
1	1	0	0	$f_{osc}/1024$	-
1	1	0	1	$f_{osc}/768$	-
1	1	1	0	$f_{osc}/512$	-
1	1	1	1	$f_{osc}/256$	-

Control Data Functions – continued

12. W10 to W17^(Note), W20 to W27, W30 to W37, W40 to W47, W50 to W57 and W60 to W67: PWM output waveform duty control data.

These control data bits set the high level pulse width for PWM output waveforms

N=1 to 6, $T_p=1/f_p$

Wn0	Wn1	Wn2	Wn3	Wn4	Wn5	Wn6	Wn7	PWM Duty	Reset Condition
0	0	0	0	0	0	0	0	(1/256) x T_p	○
0	0	0	0	0	0	0	1	(2/256) x T_p	-
0	0	0	0	0	0	1	0	(3/256) x T_p	-
0	0	0	0	0	0	1	1	(4/256) x T_p	-
0	0	0	0	0	1	0	0	(5/256) x T_p	-
0	0	0	0	0	1	0	1	(6/256) x T_p	-
0	0	0	0	0	1	1	0	(7/256) x T_p	-
0	0	0	0	0	1	1	1	(8/256) x T_p	-
0	0	0	0	1	0	0	0	(9/256) x T_p	-

3. Serial Interface address: 43H
4. KD1 to KD30: Key data
5. PA: Power-saving acknowledge data
6. If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

2. When SCL is stopped at the high level^(Note 2)

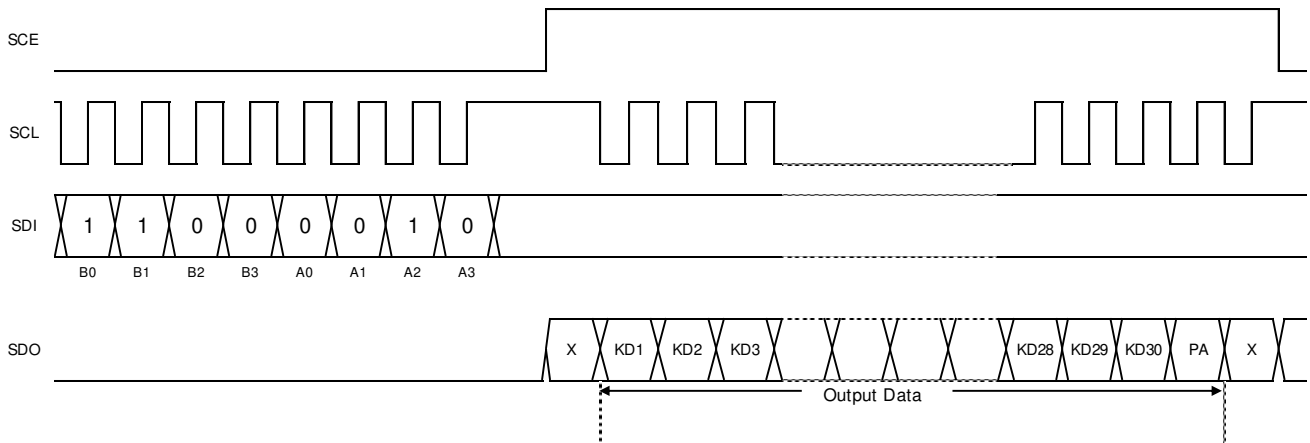

Figure 12. Serial Data Output Format

(Note 2)

1. X=Don't care
2. B0 to B3, A0 to A3: Serial Interface address
3. Serial Interface address: 43H
4. KD1 to KD30: Key data
5. PA: Power-saving acknowledge data
6. If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

Output Data

1. KD1 to KD30: Key Data

When a key matrix of up to 30 keys is formed from the KS1 to KS6 output pins and the KI1 to KI5 input pins and one of those keys is pressed, the key output data corresponding to that key will be set to 1. The table shows the relationship between those pins and the key data bits.

Item	KI1	KI2	KI3	KI4	KI5
KS1	KD1	KD2	KD3	KD4	KD5
KS2	KD6	KD7	KD8	KD9	KD10
KS3	KD11	KD12	KD13	KD14	KD15
KS4	KD16	KD17	KD18	KD19	KD20
KS5	KD21	KD22	KD23	KD24	KD25
KS6	KD26	KD27	KD28	KD29	KD30

2. PA: Power-saving Acknowledge Data

This output data is set to the state when the key was pressed. In that case SDO will go to the low level. If serial data is input during this period and the mode is set (normal mode or power-saving mode), the IC will be set to that mode. PA is set to 1 in the power-saving mode and to 0 in the normal mode.

Power-saving Mode

Power-saving mode is activated when least one of control data BU0 or BU1 or BU2 is set to 1. All segment and common outputs will go low. The oscillation circuit will stop (It can be restarted by a key press), thus reducing power consumption. This mode can be disabled when control data bits BU0, BU1 and BU2 are all set to 0. However, note that the S1/P1/G1 to S6/P6/G6 outputs can still be used as General-purpose output pins according to the state of the P0 to P2 control data bits, even in power-saving mode. (See [Control Data Functions](#).)

Key Scan Operation Function

1. Key Scan Timing

The key scan period is 4608T(s). To reliably determine the on/off state of the keys, the BU91520KV-M scans the keys twice and determines that a key has been pressed when the key data agrees. It outputs a key data read request (a low level on SDO) 9840T(s) after starting a key scan. If the key data does not agree and a key was pressed at that point, it scans the keys again. Thus the BU91520KV-M cannot detect a key press shorter than 9840T(s).

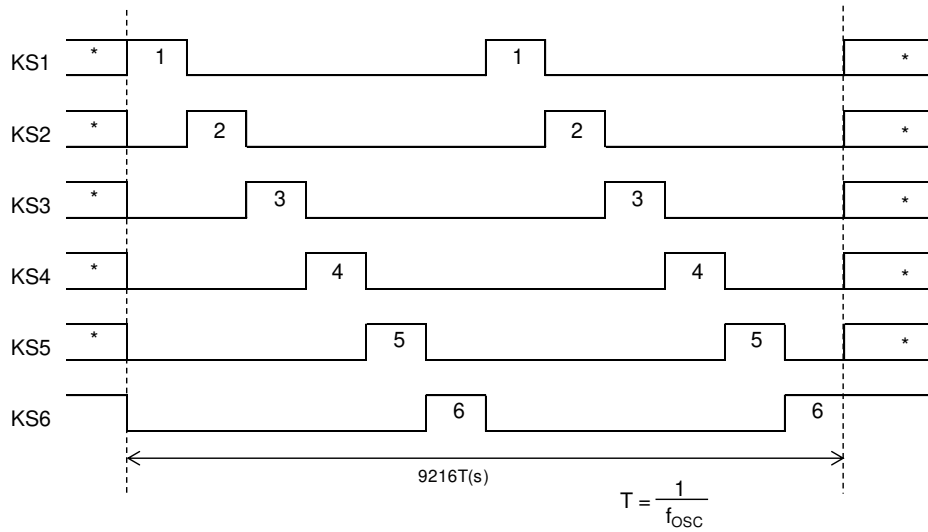

Figure 13. Key Scan Timing^(Note)

(Note) In power-saving mode the high/low state of these pins is determined by the BU0 to BU2 bits in the control data. Key scan output signals are not output from pins that are set "L".

2. In Normal Mode

The pins KS1 to KS6 are set "H".

When a key is pressed a key scan is started and the keys are scanned until all keys are released. Multiple key presses are recognized by determining whether multiple key data bits are set.

If a key is pressed for longer than 9840T(s) (Where $T=1/f_{osc}$) the BU91520KV-M outputs a key data read request (a low level on SDO) to the controller. The controller acknowledges this request and reads the key data. However, if SCE is high during a serial data transfer, SDO will be set "H".

After the controller reads the key data, the key data read request is cleared (SDO is set high) and the BU91520KV-M performs another key scan. Also note that SDO, being an open-drain output, requires a pull-up resistor (between 1 kΩ and 10kΩ).

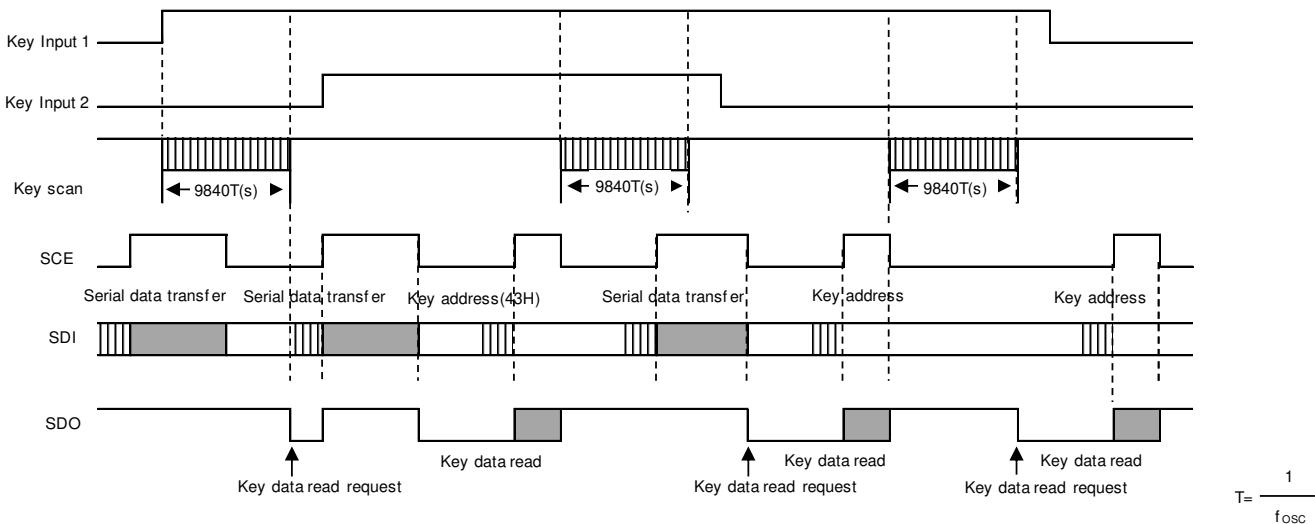

Figure 14. Key Scan Operation In Normal Mode

Key Scan Operation Function – continued

3. In Power-saving Mode

The pins KS1 to KS6 are set to high or low by the BU0 to BU2 bits in the control data. (See the [Control Data Functions](#) for details.)

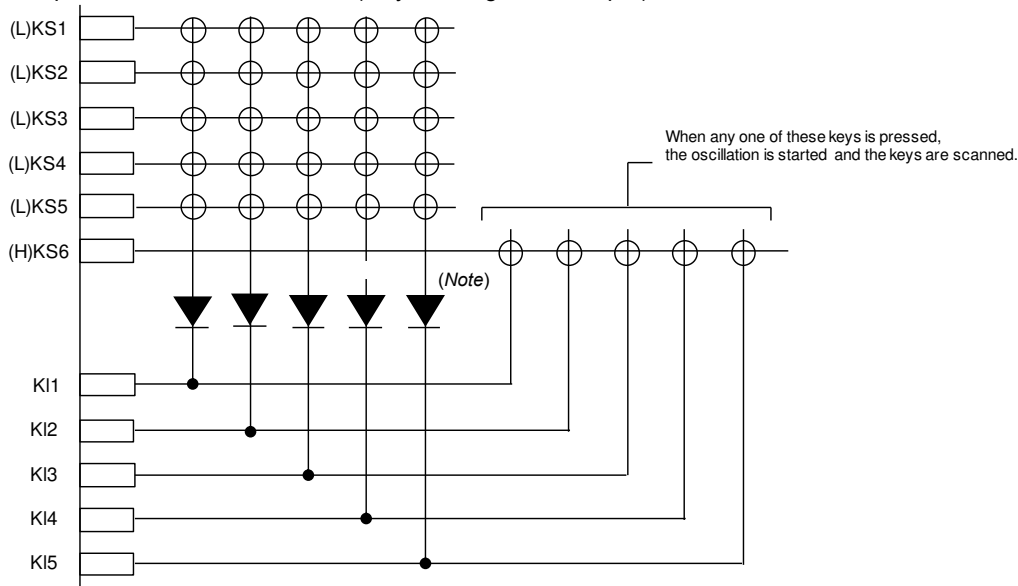

If a key on one of the lines corresponding to a KS1 to KS6 pin which is set high is pressed, the oscillation is started and a key scan is performed. Keys are scanned until all keys are released. Multiple key presses are recognized by determining whether multiple key data bits are set.

If a key is pressed for longer than 9840T(s) (Where $T=1/f_{osc}$) the BU91520KV-M outputs a key data read request (a low level on SDO) to the controller. The controller acknowledges this request and reads the key data. However, if SCE is high during a serial data transfer, SDO will be set high.

After the controller reads the key data, the key data read request is cleared (SDO is set high) and the BU91520KV-M performs another key scan. However, this does not clear power-saving mode. Also note that SDO, being an open-drain output, requires a pull-up resistor (between 1kΩ and 10kΩ).

Power-saving mode key scan example

Example: BU0=0, BU1=0, BU2=1 (only KS6 high level output)

(Note)
These diodes are required to reliably recognize multiple key presses on the KS6 line when power-saving mode state with only KS6 high, as in the above example. That is, these diodes prevent incorrect operations due to sneak currents in the KS6 key scan output signal when keys on the KS1 to KS5 lines are pressed at the same time.

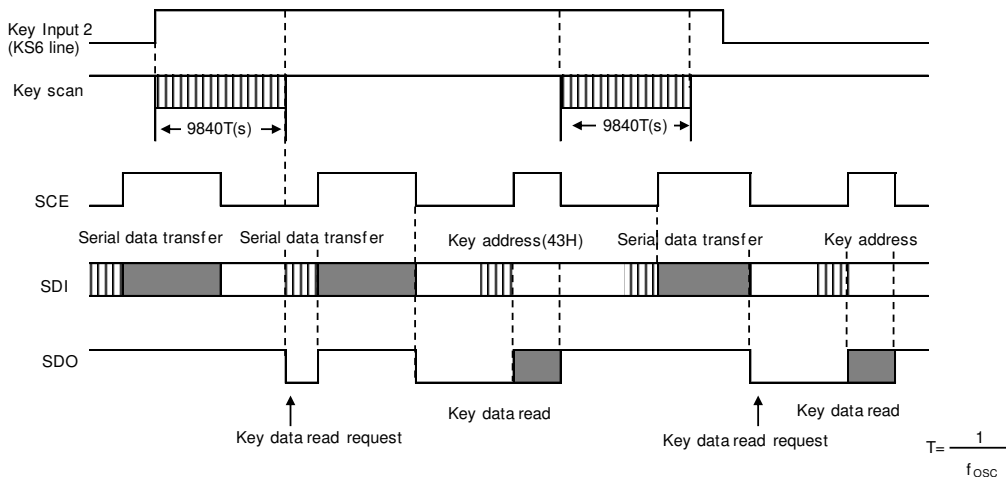

Figure 15. Key Scan Operation In Power-saving Mode

Multiple Key Press

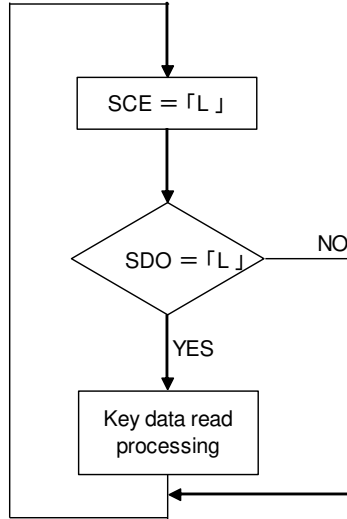

Although the BU91520KV-M is capable of key scanning without inserting diodes for dual key presses, triple key presses on the K11 to K15 input pin lines, or multiple key presses on the KS1 to KS6 output pin lines, multiple key presses other than these cases may result in keys that were not pressed recognized as having been pressed. Therefore, a diode must be inserted in series with each key. Applications that do not recognize multiple key presses of three or more keys should ignore the key data if the key data contains three or more bits that has a value of "1".

Controller Key Data Read Technique

When the controller receives a key data read request from BU91520KV-M, it performs a key data read acquisition operation using either the Timer Based Key Data Acquisition or the Interrupt Based Key Data Acquisition.

1. Timer Based Key Data Acquisition Technique

Under the Timer Based Key Data Acquisition Technique, the controller uses a timer to determine the states of the keys (on or off) and read the key data. Please refer to the flow chart below.

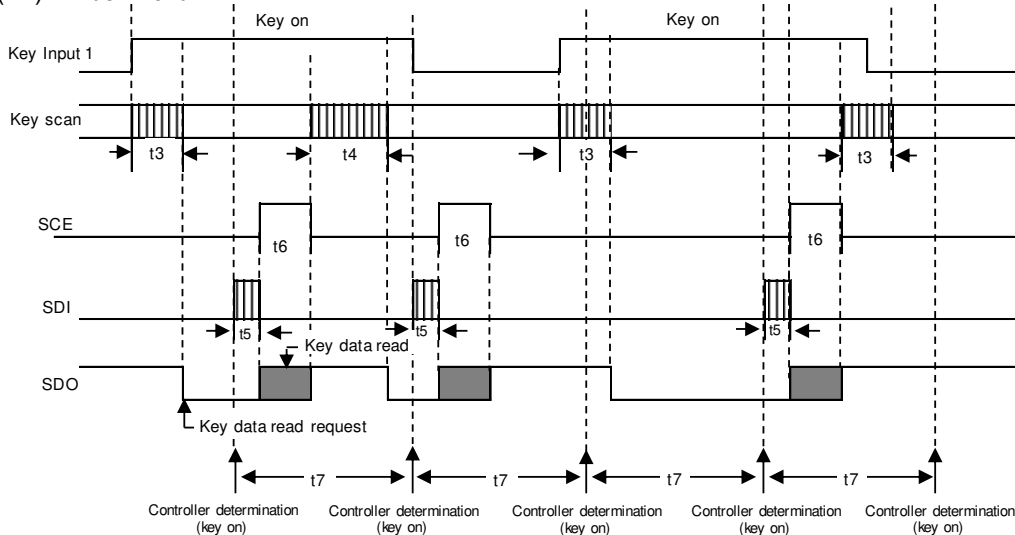

Key data read processing: Refer to [“Serial Data Output”](#)

Figure 16. Flowchart

In this technique, the controller uses a timer to determine key on/off states and read the key data. The controller must check the SDO state when SCE is low every t_7 period without fail. If SDO is low, the controller recognizes that a key has been pressed and executes the key data read operation.

The period t_7 in this technique must satisfy the following condition.
 $t_7 > t_4 + t_5 + t_6$

If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

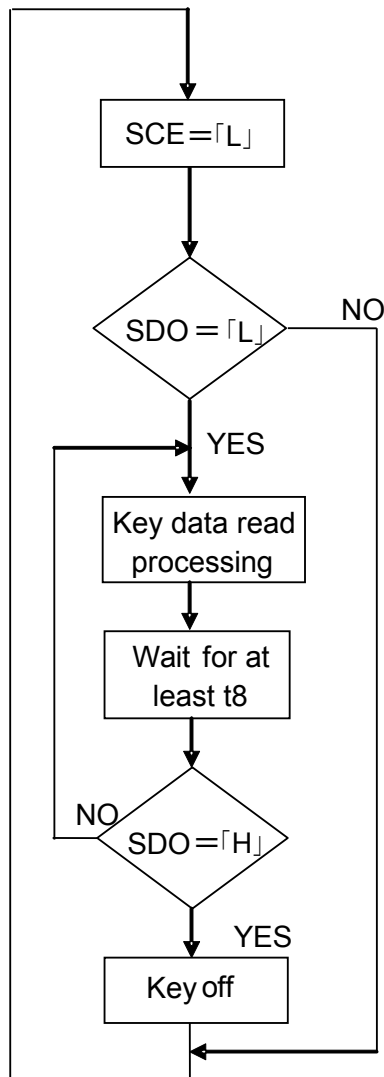

- t3: Key scan execution time when the key data agreed for two key scans. 9840T(s)
- t4: Key scan execution time when the key data did not agree for two key scans and the key scan was executed again. 19680T(s) ($T=1/f_{osc}$)
- t5: Key address (43H) transfer time
- t6: Key data read time

Figure 17. Timer Based Key Data Read Operation

Controller Key Data Read Technique – continued

2. Interrupt Based Key Data Acquisition Technique

Under the Interrupt Based Key Data Acquisition Technique, the controller uses interrupts to determine the state of the keys (on or off) and read the key data. Please refer to the flow chart diagram below.

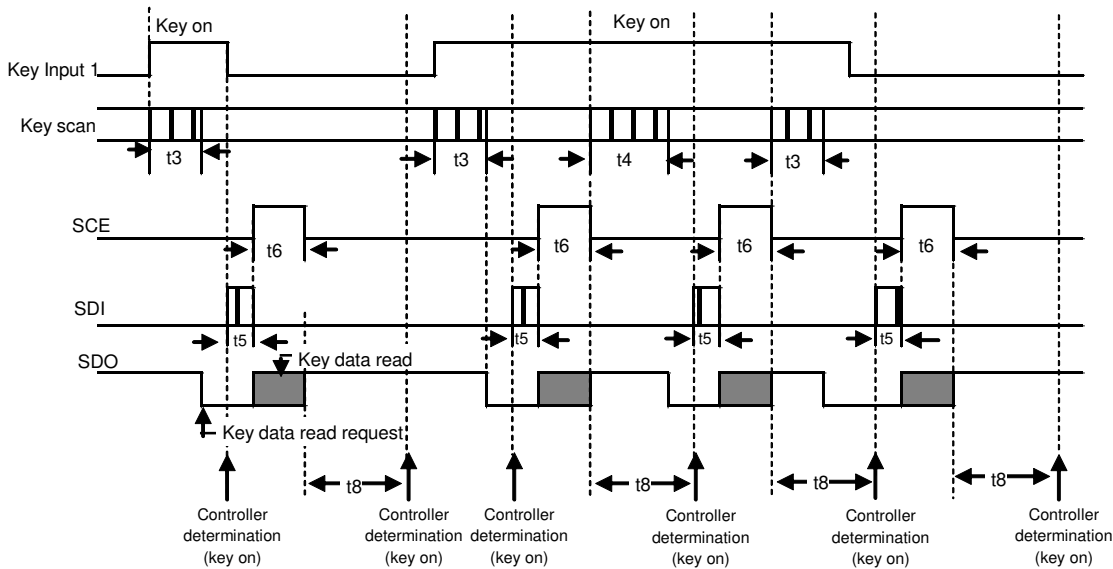

Key data read processing: Refer to [“Serial Data Output”](#)

Figure 18. Flowchart

Controller Key Data Read Technique – continued

In this technique, the controller uses interrupts to determine key on/off states and read the key data. The controller must check the SDO state when SCE is low. If SDO is low, the controller recognizes that a key has been pressed and executes the key data read operation. After that the next key on/off determination is performed after the time t_8 has elapsed by checking the SDO state when SCE is low and reading the key data. The period t_8 in this technique must satisfy $t_8 > t_4$.

If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

- t3: Key scan execution time when the key data agreed for two key scans. 9840T(s)
- t4: Key scan execution time when the key data did not agree for two key scans and the key scan was executed again. 19680T(s) ($T=1/f_{osc}$)
- t5: Key address (43H) transfer time
- t6: Key data read time

INHb Pin and Display Control

The INHb pin operates Display off of LCD.
INHb control depends on set pin function.

Below table shows pin function and control by the INHb pin.

Pin Function	Control	
	INHb = L	INHb = H
SEG/COM	Display forced off	Display on
PWM/GPO	Operation Stop	Operation Available
Key Scan	Available regardless of INHb	
External Clock Input	Available regardless of INHb	

Below table shows pin name and pin state of INHb = L.

Each output state are decided by Control data(P0 to P2, KM0 to KM2, OC)

For the details, please refer to "[Control Data Functions](#)".

Pin Name	Pin Function ^(Note) (In case of INHb = L)					
	SEG	COM	PWM	GPO	Keyscan	External Clock Input
S1/P1/G1 to S6/P6/G6	Stop (VSS)	-	Stop (VSS)	Stop (VSS)	-	-
S7 to S55, S67, S68	Stop (VSS)	-	-	-	-	-
KS1/S56 to KS6/S61	Stop (VSS)	-	-	-	Keyscan Output Operation	-
KI1/S62 to KI5/S66	Stop (VSS)	-	-	-	Keyscan Input Operation	-
OSC/S69	Stop (VSS)	-	-	-	-	Clock Input Operation
COM1 to COM4	-	Stop (VSS)	-	-	-	-

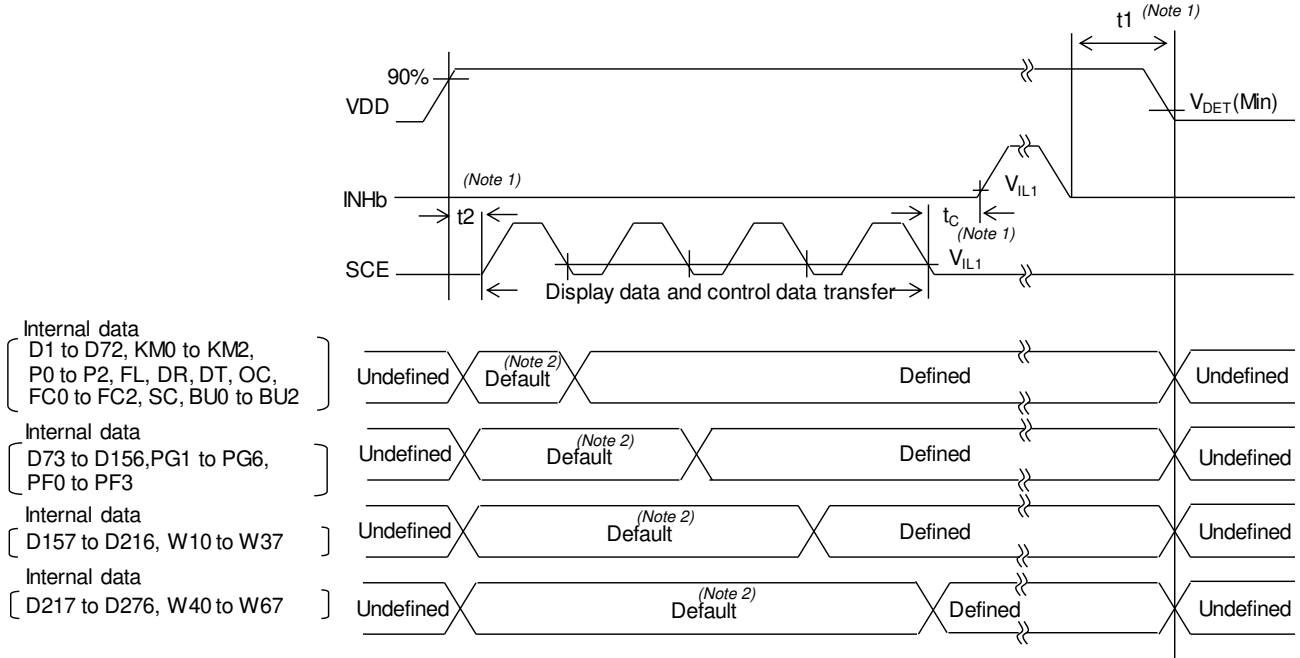

(Note) "-" means the pin does not have the function.

For example, S1/P1/G1 to S6/P6/G6 are not set COM, Keyscan and External Clock Input.

INHb Pin and Display Control- continued

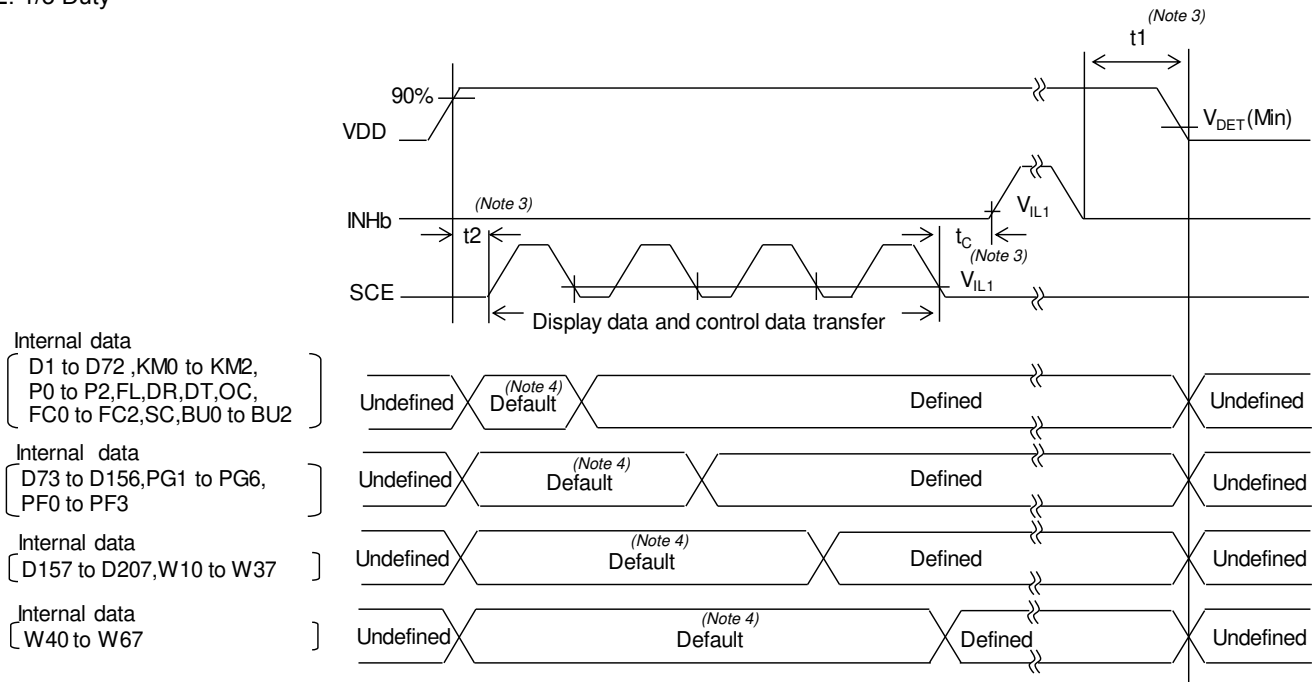

Since the IC internal data (the display data D1 to D276 and the control data) is undefined when power is first applied, applications should set the INHb pin low at the same time as power is applied to turn off the display (This sets the S1/P1/G1 to S6/P6/G6, S7 to S69, COM1 to COM4 to the VSS level.) and during this period send serial data from the controller. The controller should then set the INHb pin high after the data transfer has completed. This procedure prevents meaningless displays at power on.

1. 1/4 Duty

(Note 1) $t1 \geq 0$, $t2 \geq 0$, tC : 10 μ s (Min)
 When VDD level is over 90%, there may be cases where command is not received correctly in unstable VDD.
 (Note 2) Display data are undefined. Regarding default value, refer to [Reset Condition](#).

2. 1/3 Duty

(Note 3) $t1 \geq 0$, $t2 \geq 0$, tC : 10 μ s (Min)
 When VDD level is over 90%, there may be cases where command is not received correctly in unstable VDD.
 (Note 4) Display data are undefined. Regarding default value, refer to [Reset Condition](#).

Oscillation Stabilization Time

It must be noted that the oscillation of the internal oscillation circuit is unstable for a maximum of 100µs (oscillation stabilization time) after oscillation has started.

Figure 30. Oscillation Stabilization Time

Power-saving Mode Operation in External Clock Mode

After receiving [BU0,BU1,BU2]=[1,1,1], BU91520KV-M enter to power saving mode synchronized with frame then Segment and Common pins output VSS level.

Therefore, in external clock mode, it is necessary to input the external clock based on each frame frequency setting after sending [BU0,BU1,BU2]=[1,1,1].

For the required number of clock, refer to [“6. FC0, FC1 and FC2: Common / Segment output waveform frame frequency switching control data”](#).

For example, please input the external clock as below.

[FC0,FC1,FC2]=[0,0,0]: In case of $f_{osc}/12288$ setting, it needs over 12288clk,

[FC0,FC1,FC2]=[0,1,0]: In case of $f_{osc}/9216$ setting, it needs over 9216clk,

[FC0,FC1,FC2]=[1,1,1]: In case of $f_{osc}/3072$ setting, it needs over 3072clk

Please refer to the timing chart below.

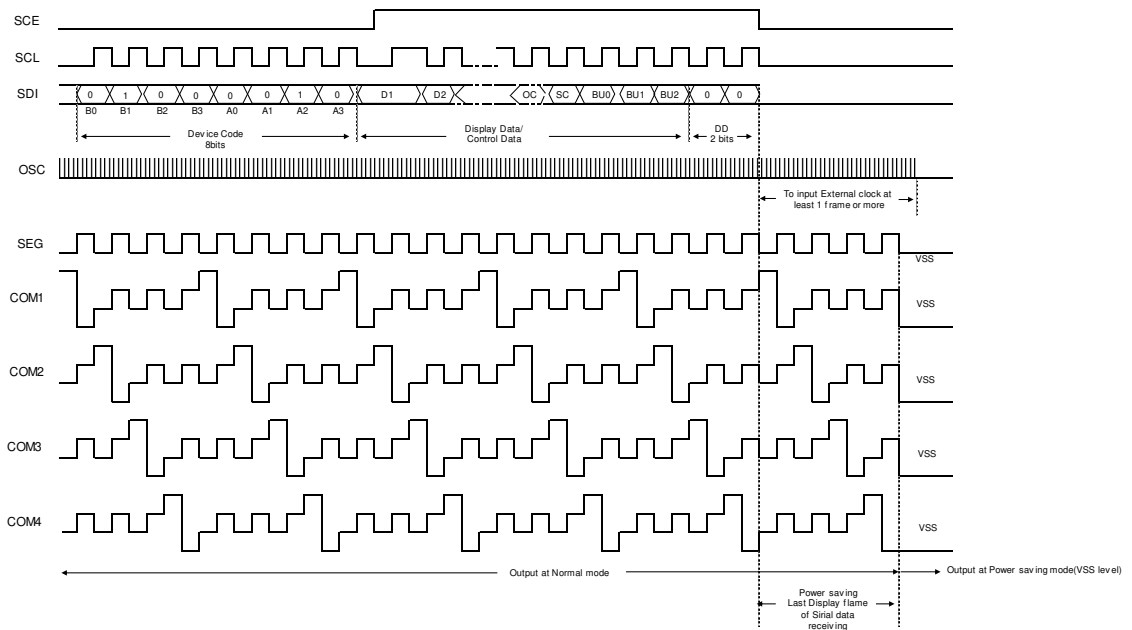

Figure 31. External Clock Stop Timing(1/4 Duty)

Voltage Detection Type Reset Circuit (VDET)

The Voltage Detection Type Reset Circuit generates an output signal that resets the system when power is applied for the first time and when the power supply voltage drops (that is, for example, the power supply voltage is less than or equal to the power down detection voltage $V_{DET}=1.8V$ Typ.). To ensure that this reset function works properly, it is recommended that a capacitor be connected to the power supply line so that both the power supply voltage (VDD) rise time when power is first applied and the power supply voltage (VDD) fall time when the voltage drops are at least 1ms.

To refrain from data transmission is strongly recommended while power supply is rising up or falling down to prevent from the occurrence of disturbances on transmission and reception

Figure 32. VDET Detection Timing

Power supply voltage VDD fall time: $t_1 > 1\text{ms}$

Power supply voltage VDD rise time: $t_2 > 1\text{ms}$

Internal reset power supply retain time: $t_3 > 1\text{ms}$

When it is difficult to keep above conditions, it is possibility to cause meaningless display due to no IC initialization. Please execute the IC initialization as quickly as possible after Power-on to reduce such an affect. See the IC initialization flow as below.

But since commands are not received when the power is OFF, the IC initialization flow is not the same function as POR.

Set [BU0,BU1,BU2]=[1,1,1](power-saving mode) and SC=1(Display Off) as quickly as possible after Power-on.

BU91520KV-M can receive commands in 0ns after Power-on(VDD level is 90%).

Please refer to the timing chart of "[INHb Pin and Display Control](#)".

Reset Condition

When BU91520KV-M is initialized,the internal status after power supply has been reset as the following table.

Instruction	At Reset Condition
Key Scan Mode	[KM0,KM1,KM2]=[1,1,1]: Key scan no use
S1/P1/G1 to S6/P6/G6 Pin	[P0,P1,P2]=[0,0,0]:all segment output
LCD Bias	DR=0:1/3 Bias
LCD Duty	DT=0:1/4 Duty
Line / Frame Inversion Mode	FL=0:Line Inversion
Display Frame Frequency	[FC0,FC1,FC2]=[0,0,0]: $f_{osc}/12288$
Display Clock Mode	OC=0:Internal oscillator
LCD Display	SC=1:OFF
Power Mode	[BU0,BU1,BU2]=[1,1,1]:Power saving mode
PWM / GPO Output	PGx=0:PWM output(x=1 to 6)
PWM Frequency	[PF0,PF1,PF2,PF3]=[0,0,0,0]: $f_{osc}/4096$
PWM Duty	[Wn0 to Wn7]=[0,0,0,0,0,0,0,0] $1/256 \times T_p$ (n=1 to 6, $T_p=1/f_p$)

Operational Notes

1. Reverse Connection of Power Supply

Connecting the power supply in reverse polarity can damage the IC. Take precautions against reverse polarity when connecting the power supply, such as mounting an external diode between the power supply and the IC's power supply pins.

2. Power Supply Lines

Design the PCB layout pattern to provide low impedance supply lines. Separate the ground and supply lines of the digital and analog blocks to prevent noise in the ground and supply lines of the digital block from affecting the analog block. Furthermore, connect a capacitor to ground at all power supply pins. Consider the effect of temperature and aging on the capacitance value when using electrolytic capacitors.

3. Ground Voltage

Ensure that no pins are at a voltage below that of the ground pin at any time, even during transient condition.

4. Ground Wiring Pattern

When using both small-signal and large-current ground traces, the two ground traces should be routed separately but connected to a single ground at the reference point of the application board to avoid fluctuations in the small-signal ground caused by large currents. Also ensure that the ground traces of external components do not cause variations on the ground voltage. The ground lines must be as short and thick as possible to reduce line impedance.

5. Recommended Operating Conditions

These conditions represent a range within which the expected characteristics of the IC can be approximately obtained. The electrical characteristics are guaranteed under the conditions of each parameter.

6. Inrush Current

When power is first supplied to the IC, it is possible that the internal logic may be unstable and inrush current may flow instantaneously due to the internal powering sequence and delays, especially if the IC has more than one power supply. Therefore, give special consideration to power coupling capacitance, power wiring, width of ground wiring, and routing of connections.

7. Operation Under Strong Electromagnetic Field

Operating the IC in the presence of a strong electromagnetic field may cause the IC to malfunction.

8. Testing on Application Boards

When testing the IC on an application board, connecting a capacitor directly to a low-impedance output pin may subject the IC to stress. Always discharge capacitors completely after each process or step. The IC's power supply should always be turned off completely before connecting or removing it from the test setup during the inspection process. To prevent damage from static discharge, ground the IC during assembly and use similar precautions during transport and storage.

9. Inter-pin Short and Mounting Errors

Ensure that the direction and position are correct when mounting the IC on the PCB. Incorrect mounting may result in damaging the IC. Avoid nearby pins being shorted to each other especially to ground, power supply and output pin. Inter-pin shorts could be due to many reasons such as metal particles, water droplets (in very humid environment) and unintentional solder bridge deposited in between pins during assembly to name a few.

Operational Notes – continued**10. Unused Input Pins**

Input pins of an IC are often connected to the gate of a MOS transistor. The gate has extremely high impedance and extremely low capacitance. If left unconnected, the electric field from the outside can easily charge it. The small charge acquired in this way is enough to produce a significant effect on the conduction through the transistor and cause unexpected operation of the IC. So unless otherwise specified, unused input pins should be connected to the power supply or ground line.

11. Regarding the Input Pin of the IC

In the construction of this IC, P-N junctions are inevitably formed creating parasitic diodes or transistors. The operation of these parasitic elements can result in mutual interference among circuits, operational faults, or physical damage. Therefore, conditions which cause these parasitic elements to operate, such as applying a voltage to an input pin lower than the ground voltage should be avoided. Furthermore, do not apply a voltage to the input pins when no power supply voltage is applied to the IC. Even if the power supply voltage is applied, make sure that the input pins have voltages within the values specified in the electrical characteristics of this IC.

Ordering Information

B U 9 1 5 2 0 K V		-	M E 2	
Part Number	Package KV : VQFP80		Product Rank M: for Automotive Packaging Specification E2: Embossed tape and reel	

Marking Diagram

Physical Dimension, Tape and Reel Information

Package Name	VQFP80

Notice

Precaution on using ROHM Products

1. If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment ^(Note 1), aircraft/spacecraft, nuclear power controllers, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
 - [a] Installation of protection circuits or other protective devices to improve system safety
 - [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure
3. Our Products are not designed under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
 - [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
 - [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
 - [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
 - [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
 - [f] Sealing or coating our Products with resin or other coating materials
 - [g] Use of our Products without cleaning residue of flux (Exclude cases where no-clean type fluxes is used. However, recommend sufficiently about the residue.); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
 - [h] Use of the Products in places subject to dew condensation
4. The Products are not subject to radiation-proof design.
5. Please verify and confirm characteristics of the final or mounted products in using the Products.
6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse, is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
7. De-rate Power Dissipation depending on ambient temperature. When used in sealed area, confirm that it is the use in the range that does not exceed the maximum junction temperature.
8. Confirm that operation temperature is within the specified range described in the product specification.
9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
2. In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of ionizer, friction prevention and temperature / humidity control).

Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
 - [a] the Products are exposed to sea winds or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - [b] the temperature or humidity exceeds those recommended by ROHM
 - [c] the Products are exposed to direct sunshine or condensation
 - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

Precaution for Product Label

A two-dimensional barcode printed on ROHM Products label is for ROHM's internal use only.

Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

Precaution for Foreign Exchange and Foreign Trade act

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.
2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).
3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

General Precaution

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
