ICL232

+5V Powered, Dual RS-232 Transmitter/Receiver

FN3020
Rev 8.00
October 15, 2014

The ICL232 is a dual RS-232 transmitter/receiver interface circuit that meets all EIA RS-232C and V.28 specifications. It requires a single +5V power supply, and features two onboard charge pump voltage converters which generate +10V and -10V supplies from the 5V supply.

The drivers feature true TTL/CMOS input compatibility, slew-rate-limited output, and 300Ω power-off source impedance. The receivers can handle up to +30V, and have a 3kΩ to 7kΩ input impedance. The receivers also have hysteresis to improve noise rejection.

Applications

- Any system requiring RS-232 communications port
  - Computer - portable and mainframe
  - Peripheral - printers and terminals
  - Portable instrumentation
  - Modems
- Dataloggers

Features

- Meets all RS-232C and V.28 specifications
- Requires only single +5V power supply
- Onboard voltage doubler/inverter
- Low power consumption
- 2 drivers
  - ±9V output swing for +5V Input
  - 300Ω power-off source impedance
  - Output current limiting
  - TTL/CMOS compatible
  - 30V/µs maximum slew rate
- 2 Receivers
  - ±30V input voltage range
  - 3kΩ to 7kΩ input impedance
  - 0.5V hysteresis to improve noise rejection
- All critical parameters are guaranteed over the entire commercial, industrial and military temperature ranges
- Pb-free (RoHS compliant)

Pin Descriptions

PIN #	PIN NAME	DESCRIPTION
1	C1+	External capacitor “+” for internal voltage doubler.
2	V+	Internally generated +10V (typical) supply.
3	C1-	External capacitor “-” for internal voltage doubler.
4	C2+	External capacitor “+” internal voltage inverter.
5	C2-	External capacitor “-” internal voltage inverter.
6	V-	Internally generated -10V (typical) supply.
7	$T2_{OUT}$	RS-232 Transmitter 2 output ±10V (typical).
8	$R2_{IN}$	RS-232 Receiver 2 input, with internal 5k pulldown resistor to GND.
9	R2out	Receiver 2 TTL/CMOS output.
10	$T2_{IN}$	Transmitter 2 TTL/CMOS input, with internal 400k pullup resistor to V_{CC}.
11	$T1_{IN}$	Transmitter 1 TTL/CMOS input, with internal 400k pullup resistor to V_{CC}.
12	$R1_{OUT}$	Receiver 1 TTL/CMOS output.
13	$R1_{IN}$	RS-232 Receiver 1 input, with internal 5k pulldown resistor to GND.
14	$T1_{OUT}$	RS-232 Transmitter 1 output ±10V (typical).
15	GND	Supply Ground
16	V_{CC}	Positive Power Supply +5V ±10%.

Ordering Information

PART NUMBER (Notes 1, 2)	TEMP RANGE (°C)	PACKAGE (Pb-Free)	PKG DWG. #
ICL232CBEZ	0 to +70	16 Ld SOIC	M16.3
ICL232CBEZT (Note 3)	0 to +70	16 Ld SOIC	M16.3

NOTES:

1. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
2. For Moisture Sensitivity Level (MSL), please see product information page for ICL232. For more information on MSL, please see tech brief TB363.
3. Please refer to TB347 for details on reel specifications.

Absolute Maximum Ratings

V_{CC} to Ground . . . . . (GND -0.3V) < V_{CC} < 6V

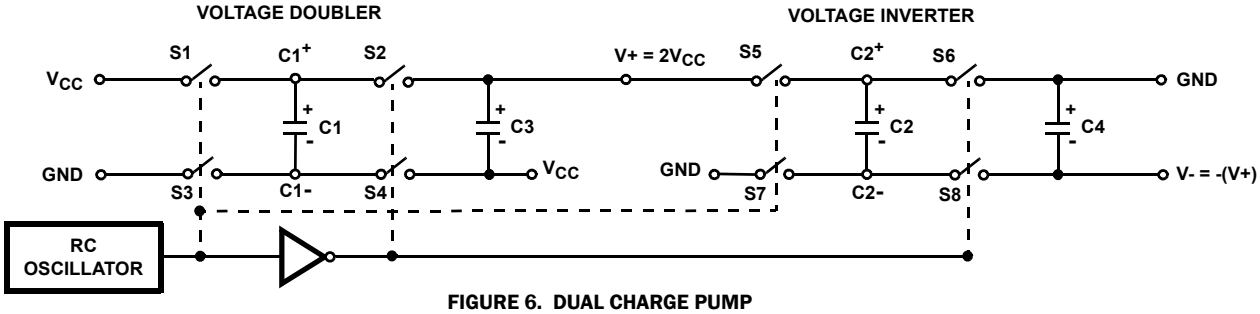

FIGURE 6. DUAL CHARGE PUMP

Detailed Description

The ICL232 is a dual RS-232 transmitter/receiver powered by a single +5V power supply which meets all EIA RS232C specifications and features low power consumption. Figure 1 illustrates the major elements of the ICL232. The circuit is divided into three sections: a voltage doubler/inverter, dual transmitters, and dual receivers.

Voltage Converter

An equivalent circuit of the dual charge pump is illustrated in Figure 6.

The voltage quadrupler contains two charge pumps which use two phases of an internally generated clock to generate +10V and -10V. The nominal clock frequency is 16kHz. During phase one of the clock, capacitor C1 is charged to V_{CC}. During phase two, the voltage on C1 is added to V_{CC}, producing a signal across C2 equal to twice V_{CC}. At the same time, C3 is also charged to $2V_{CC}$, and then during phase one, it is inverted with respect to ground to produce a signal across C4 equal to $-2V_{CC}$. The voltage converter accepts input voltages up to 5.5V. The output impedance of the doubler (V+) is approximately 200Ω, and the output impedance of the inverter (V-) is approximately 450Ω. Typical graphs are presented which show the voltage converters output vs input voltage and output voltages vs load characteristics. The test circuit (Figure 2) uses 1µF capacitors for C1 to C4, however, the value is not critical. Increasing the values of C1 and C2 will lower the output impedance of the voltage doubler and inverter, and increasing the values of the reservoir capacitors, C3 and C4, lowers the ripple on the V+ and V- supplies.

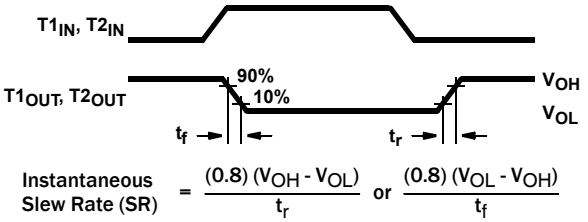

FIGURE 7. SLEW RATE DEFINITION

Transmitters

The transmitters are TTL/CMOS compatible inverters which translate the inputs to RS-232 outputs. The input logic threshold is about 26% of V_{CC}, or 1.3V for V_{CC} = 5V. A logic 1 at the input results in a voltage of between -5V and V- at the output, and a logic 0 results in a voltage between +5V and (V+ - 0.6V). Each transmitter input has an internal 400kΩ pullup resistor so any unused input can be left unconnected and its output remains in its low state. The output voltage swing meets the RS-232C specification of ±5V minimum with the worst case conditions of: both transmitters driving 3kΩ minimum load impedance, V_{CC} = 4.5V, and maximum allowable operating temperature. The transmitters have an internally limited output slew rate which is less than 30V/µs. The outputs are short circuit protected and can be shorted to ground indefinitely. The powered down output impedance is a minimum of 300Ω with ±2V applied to the outputs and V_{CC} = 0V.

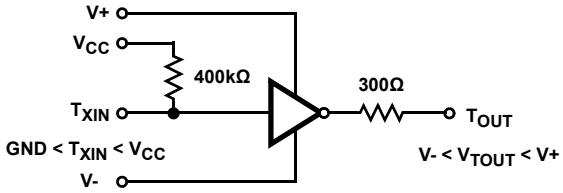

FIGURE 8. TRANSMITTER

Receivers

The receiver inputs accept up to ±30V while presenting the required 3kΩ to 7kΩ input impedance even it the power is off (V_{CC} = 0V). The receivers have a typical input threshold of 1.3V which is within the ±3V limits, known as the transition region, of the RS-232 specification. The receiver output is 0V to V_{CC}. The output will be low whenever the input is greater than 2.4V and high whenever the input is floating or driven between +0.8V and -30V. The receivers feature 0.5V hysteresis to improve noise rejection.

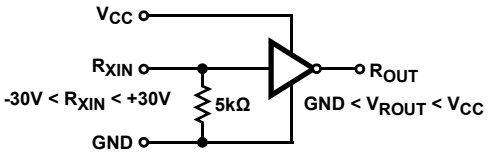

FIGURE 9. RECEIVER

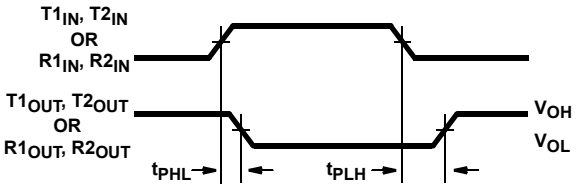

FIGURE 10. PROPAGATION DELAY DEFINITION

Applications

The ICL232 may be used for all RS-232 data terminal and communication links. It is particularly useful in applications where ±12V power supplies are not available for conventional RS-232 interface circuits. The applications presented represent typical interface configurations.

A simple duplex RS-232 port with CTS/RTS handshaking is illustrated in Figure 11. Fixed output signals such as DTR (data terminal ready) and DSRS (data signaling rate select) is generated by driving them through a 5kΩ resistor connected to V+.

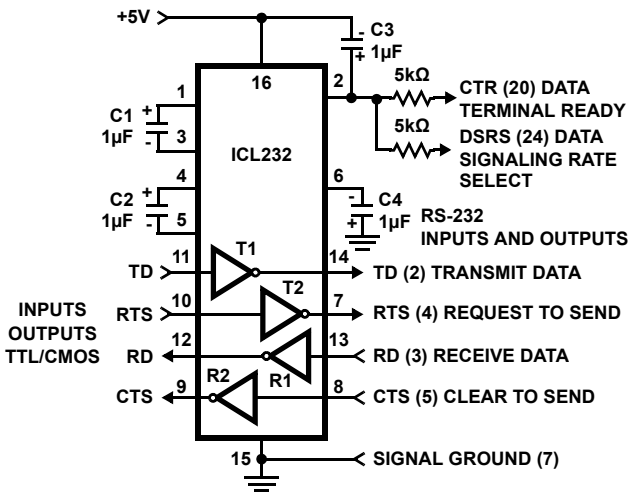

FIGURE 11. SIMPLE DUPLEX RS-232 PORT WITH CTS/RTS HANDSHAKING

In applications requiring four RS-232 inputs and outputs (Figure 12), note that each circuit requires two charge pump capacitors (C1 and C2) but can share common reservoir capacitors (C3 and C4). The benefit of sharing common reservoir capacitors is the elimination of two capacitors and the reduction of the charge pump source impedance which effectively increases the output swing of the transmitters.

Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to the web to make sure that you have the latest revision.

DATE	REVISION	CHANGE
October 15, 2014	FN3020.8	Updated the Ordering Information table on page 2 by removing several obsolete products and added Notes 2 and 3. Removed “CERDIP” and “PDIP” from Pin Configuration on page 2. Removed “ICL232I” and “ICL232M” lines under “Operating Conditions” on page 3. Removed “CERDIP” and “PDIP” lines under “Thermal Information” on page 3. Removed “Ceramic Package” line under “Maxium Junction Temperature” on page 3. Updated datasheet with Intersil new standards throughout entire datasheet. Added Revision history and About Intersil verbiage. Added Package Outline Drawing on page 8.

About Intersil

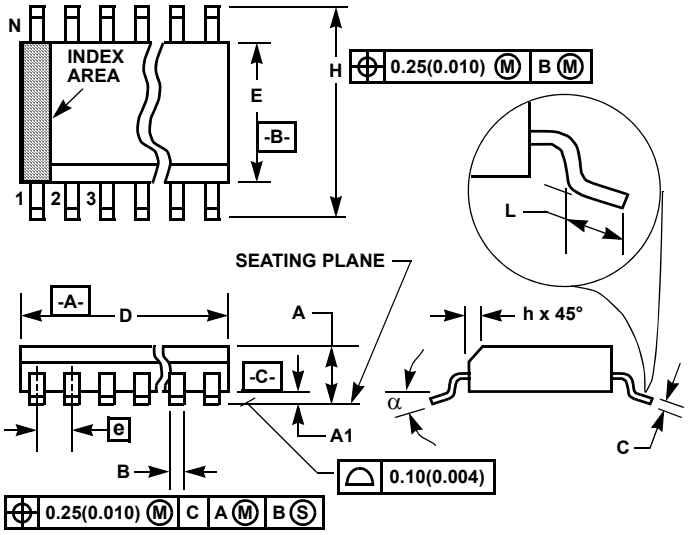
Intersil Corporation is a leading provider of innovative power management and precision analog solutions. The company's products address some of the largest markets within the industrial and infrastructure, mobile computing and high-end consumer markets.

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at www.intersil.com.

You may report errors or suggestions for improving this datasheet by visiting www.intersil.com/ask.

Reliability reports are also available from our website at www.intersil.com/support

Small Outline Plastic Packages (SOIC)



NOTES:

1. Symbols are defined in the “MO Series Symbol List” in Section 2.2 of Publication Number 95.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimension “D” does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
4. Dimension “E” does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
6. “L” is the length of terminal for soldering to a substrate.
7. “N” is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. The lead width “B”, as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch)
10. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
