9-CHANNEL RS-422 / RS-485 TRANSCEIVER

Check for Samples: SN65HVD09-EP

FEATURES

- **Designed to Operate at up to 20 Million Data Transfers per Second on Each RS-422/RS-485 Channel**
- **SN65HVD09 Packaged in Thin Shrink Small-Outline Package with 0.5-mm Pin Pitch**
- **ESD Protection on Bus Pins Exceeds 12kV**
- **Low Disabled Supply Current 8 mA Typ**
- **Thermal Shutdown Protection**
- **Positive- and Negative-Current Limiting**
- **Power-Up/Down Glitch Protection**

SUPPORTS DEFENSE, AEROSPACE, AND MEDICAL APPLICATIONS

- **Controlled Baseline**
- **One Assembly/Test Site**
- **One Fabrication Site**
- **Extended Product Life Cycle**
- **Extended Product-Change Notification**
- **Product Traceability**

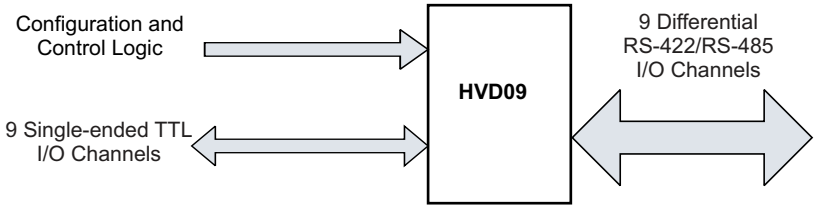
Terminals 13 through 17, and 40 through 44 are connected together to the package lead frame and signal ground.



DESCRIPTION

The SN65HVD09 is a 9-channel RS-422 / RS-485 transceiver suitable for industrial applications. It offers improved switching performance, a small package, and high ESD protection. The precise skew limits ensures that the propagation delay times, not only from channel-to-channel but from device-to-device, are closely matched for the tight skew budgets associated with high-speed parallel data buses.

Patented thermal enhancements are used in the thin shrink, small-outline package (TSSOP), allowing operation over the industrial temperature range. The TSSOP package offers very small board area requirements while reducing the package height to 1 mm. This provides more board area and allows component mounting to both sides of the printed circuit boards for low-profile, space-restricted applications such as small form-factor hard disk drives.

The HVD09 can withstand electrostatic discharges exceeding 12 kV using the human-body model, and 600 V using the machine model on the RS-485 I/O terminals. This provides protection from the noise that can be coupled into external cables. The other terminals of the device can withstand discharges exceeding 4 kV and 400 V respectively.

Each of the nine half-duplex channels of the HVD09 is designed to operate with either RS-422 or RS-485 communication networks.

The SN65HVD09 is characterized for operation from –40°C to 85°C.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

PIN FUNCTIONS

PIN NAME	PIN NO.	LOGIC LEVEL	I/O	TERMINATION	DESCRIPTION
1A to 9A	4,6,8,10, 19,21,23, 25,27	TTL	I/O	Pullup	1A to 9A carry data to and from the communication controller.
1B– to 9B–	29,31,33, 35,37,.46 , 48,50,52	RS-485	I/O	Pulldown	1B– to 9B– are the inverted data signals of the balanced pair to/from the bus.
1B+ to 9B+	30,32,34, 36,38,47, 49,51,53	RS-485	I/O	Pullup	1B+ to 9B+ are the noninverted data signals of the balanced pair to/from the bus.
BSR	2	TTL	Input	Pullup	BSR is the bit significant response. BSR disables receivers 1 through 8 and enables wired-OR drivers when BSR and DE/$\overline{RE}$ and CDE1 or CDE2 are high. Channel 9 is placed in a high-impedance state with BSR high.
CDE0	54	TTL	Input	Pulldown	CDE0 is the common driver enable 0. Its input signal enables all drivers when CDE0 and 1DE/$\overline{RE}$ – 9DE/$\overline{RE}$ are high.
CDE1	55	TTL	Input	Pulldown	CDE1 is the common driver enable 1. Its input signal enables drivers 1 to 4 when CDE1 is high and BSR is low.
CDE2	56	TTL	Input	Pulldown	CDE2 is the common driver enable 2. When CDE2 is high and BSR is low, drivers 5 to 8 are enabled.
$\overline{CRE}$	3	TTL	Input	Pullup	$\overline{CRE}$ is the common receiver enable. When high, CRE disables receiver channels 5 to 9.
1DE/$\overline{RE}$ to 9DE/$\overline{RE}$	5,7,9,11, 20,22,24, 26,28	TTL	Input	Pullup	1DE/$\overline{RE}$–9DE/$\overline{RE}$ are direction controls that transmit data to the bus when it and CDE0 are high. Data is received from the bus when 1DE/$\overline{RE}$–9DE/$\overline{RE}$ and CRE and BSR are low and CDE1 and CDE2 are low.
GND	1,13,14, 15,16,17, 40,41,42, 43,44	NA	Power	NA	GND is the circuit ground. All GND terminals except terminal 1 are physically tied to the die pad for improved thermal conductivity.(1)
V_{CC}	12,18,39, 45	NA	Power	NA	Supply voltage

(1) Terminal 1 must be connected to signal ground for proper operation.

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.r
(2) All voltage values are with respect to the GND terminals.
(3) The maximum operating junction temperature is internally limited. Use the Dissipation Rating Table to operate below this temperature.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
