Should Buyer purchase or use onsemi products for any such unintended or unauthorized application,

Low Distortion Audio Power Amplifier with Differential Output and Shutdown Mode

Product Description

The NCS2211 is a high performance, low distortion Class A/B audio amplifier. It is capable of delivering 1 W of output power into an 8 Ω speaker bridge–tied load (BTL). The NCS2211 will operate over a wide temperature range, and it is specified for single–supply voltage operation for portable applications.

It features low distortion performance, 0.2% typical THD + N @ 1 W and incorporates a shutdown/enable feature to extend battery life. The shutdown/enable feature will reduce the quiescent current to 1 μA maximum.

The NCS2211 is designed to operate over the -40°C to +85°C temperature range, and is available in an 8-lead SOIC package and a 3 X 3 mm DFN8 package. The SOIC package is pin compatible with equivalent function and comparable performance to competitive devices as is the DFN8 package. The DFN8 has a low thermal resistance of only 70°C/W plus has an exposed metal pad to facilitate heat conduction to copper PCB material.

Low distortion, high power, low quiescent current, and small packaging makes the NCS2211 suitable for applications including notebook and desktop computers, PDA's, and speaker phones.

Features

- Differential Output
- 1.0 W into an 8 Ω Speaker
- 1.5 W into a 4 Ω Speaker
- Single Supply Operation: 2.7 V to 5.5 V
- THD+N: 0.2% @ 1 W Output
- Low Quiescent Current: 20 mA Max
- Shutdown Current < 1.0 μA
- Excellent Power Supply Rejection
- Two Package Options: SOIC-8 Package and DFN8
- Pin Compatible with Competitive Devices
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable
- These Devices are Pb–Free, Halogen Free/BFR Free and are RoHS Compliant

Applications

- Desktop Computers
- Notebook Computers
- PDA's
- Speaker Phones
- Games

PIN ASSIGNMENT

PIN	NAME	DESCRIPTION
1	Enable	Enable (LOW)/Shutdown (HIGH)
2	Bias	Bias Output at (V _{CC} -V _{EE})/2; Bypass with Capacitor to Reduce Noise
3	IN+	Non-Inverting Input
4	IN-	Inverting Input
5	OUT+	Output+
6	Vcc	Positive Supply (Bypass with 10 μ F in parallel with 0.1 μ F)
7	V _{EE}	Negative Supply (Connect to GND for Single–Supply Operation)
8	OUT-	Output-

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 9 of this data sheet.

PIN CONNECTIONS for SOIC-8 and DFN8

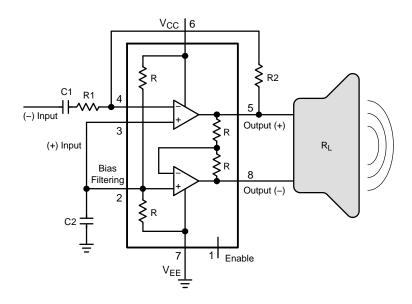

Figure 1. Block Diagram

	High	Low
Enable (Note 1)	Shutdown	Enabled

 Enable (pin 1) must be actively driven for proper operation and cannot be left floating. See EN-ABLE/SHUTDOWN CONTROL in the specification table for proper logic threshold levels.

MAXIMUM RATINGS

Parameter	Symbol	Rating	Unit
Power Supply Voltages	V _{CC}	5.5	Vdc
Output Current	lo	500	mA
Maximum Junction Temperature (Note 2)	TJ	150	°C
Operating Ambient Temperature	T _A	-40 to +85	°C
Storage Temperature Range	T _{stg}	-60 to +150	°C
Power Dissipation	P _D	(See Graph)	mW
Thermal Resistance, Junction-to-Air - SOIC-8 - DFN8 (Note 4)	$\theta_{\sf JA}$	117 70	°C/W
Moisture Sensitivity (Note 3)		Level 1	

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

- 2. Power dissipation must be considered to ensure maximum junction temperature (T_J) is not exceeded.
- 3. For additional information, see Application Note AND8003/D
- 4. As mounted on an 80x80x1.5 mm FR4 PCB with 650 mm² and 2 oz (0.034 mm) thick copper heat spreader. Following JEDEC JESD/EIA 51.1, 51.2, 51.3 test guidelines.

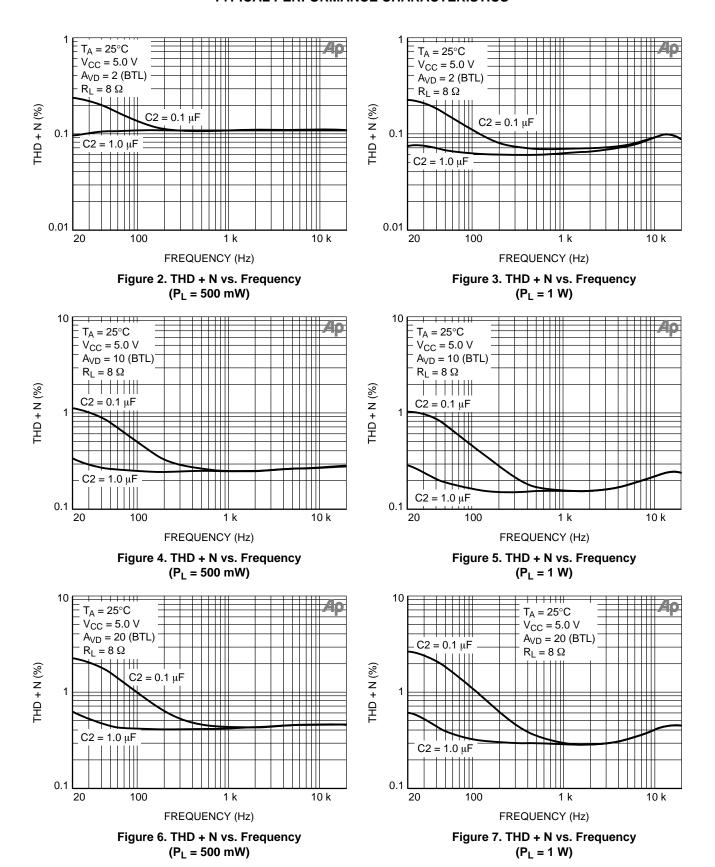

DC ELECTRICAL CHARACTERISTICS (V_{CC} = +5 V, A_{VD} = 2, R_L = 8 Ω , C2 = 0.1 μ F, T_A = 25°C, unless otherwise specified)

TYPICAL PERFORMANCE CHARACTERISTICS

(...

Figure 23. Power-Supply Rejection

APPLICATIONS INFORMATION

The NCS2211 is unity gain stable and therefore does not require any compensation, but a proper power–supply bypass is required as shown in Figure 24. Performance will be enhanced by adding a filter capacitor (C2) to the mid–supply node (pin 2). See Typical Performance Characteristics for details.

It is preferable to AC couple the input to avoid a large DC output offset.

Both outputs can be driven to within 400 mV of either supply rail with an 8 Ω load.

Typical Application of the Device:

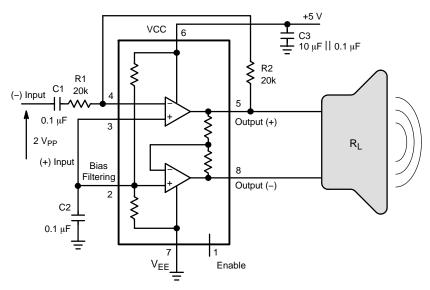

Figure 24.

THERMAL CONSIDERATIONS

Care must be taken to not exceed the maximum junction temperature of the device (150°C). Figure 15 shows the tradeoff between output power and junction temperature for different areas of exposed PCB copper (2 oz). If the maximum power is exceeded momentarily, normal circuit operation will be restored as soon as the die temperature is reduced. Leaving the device in an "overheated" condition for an extended period can result in device burnout. To ensure proper operation, it is important to observe the SOA curves.

GAIN

Since the output is differential, the gain from input to the speaker is: $A_{VD}=2$ x R2/R1. For low level input signals, THD will be optimized by pre–amplifying the signal and running the NCS2211 at gain $A_{VD}=2$ and $C_{2}=1$ μF .

BIAS FILTERING

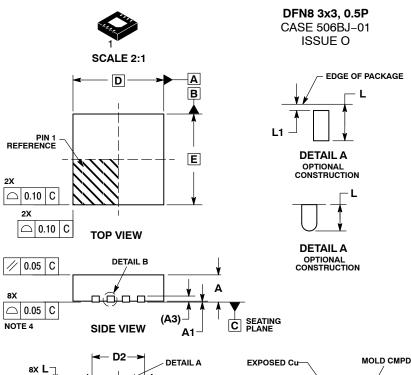

Even though the NCS2211 will operate nominally with no filter capacitor on pin 2, THD performance will be improved dramatically with a filter capacitor installed (see Typical Performance Characteristics). In addition a C2 filter capacitor at pin 2 will suppress start—up popping noise. To insure optimal suppression the time constant of the bias filtering needs to be greater than the time constant of the input capacitive coupling circuit, that is $C2 \times 25 \times C1 \times R1$.
