General Description

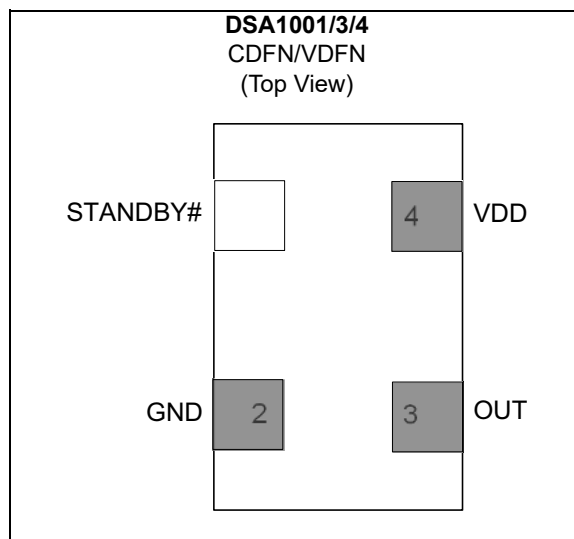

The DSA1001/3/4 is a silicon MEMS based CMOS family of oscillators that offers excellent jitter and stability performance over a wide range of supply voltages and temperatures. The device operates from 1 MHz to 150 MHz with supply voltages between 1.8 to 3.3 volts and temperature ranges up to -40°C to 105°C .

The DSA1001/3/4 incorporate an all silicon resonator that is extremely robust and nearly immune to stress related fractures, common to crystal based oscillators. Without sacrificing the performance and stability required of today’s systems, a crystal-less design allows for a higher level of reliability, making the DSA1001/3/4 ideal for rugged, industrial, and portable applications where stress, shock, and vibration can damage quartz crystal based systems.

Available in industry standard packages, the DSA1001/3/4 can be “dropped-in” to the same PCB footprint as standard crystal oscillators.

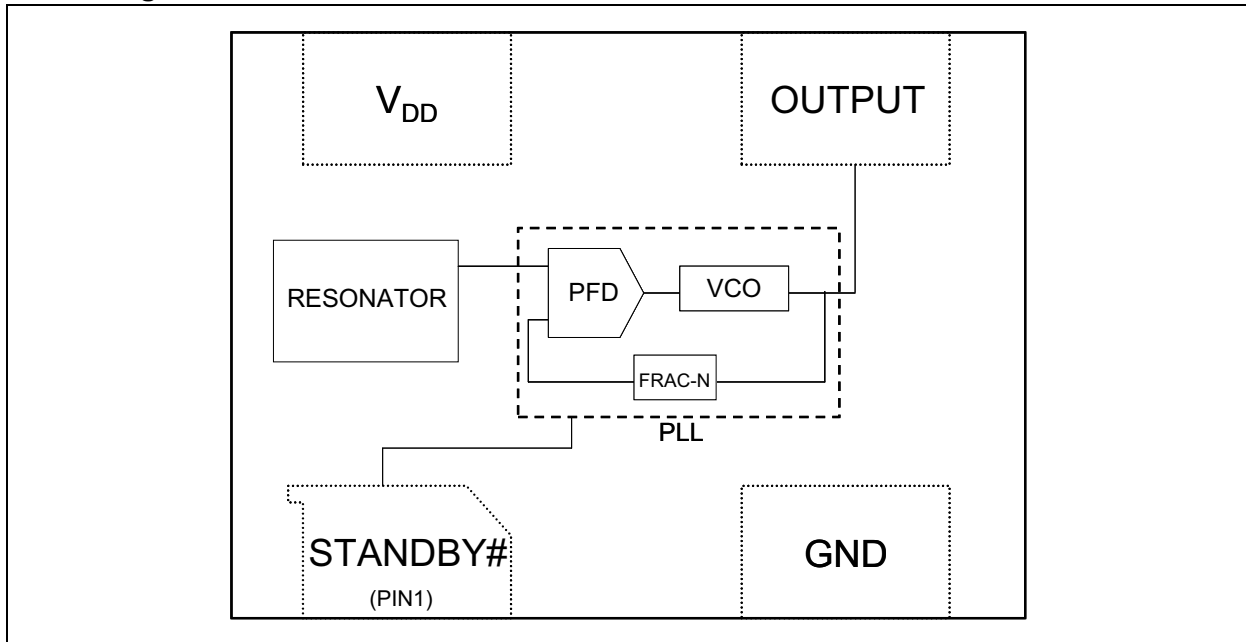

The DSA1003 and DSA1004 have the same functionality and performance as the DSA1001, but feature higher output drives of 25 pF and 40 pF, respectively.

TEMPERATURE SPECIFICATIONS (Note 1)

Parameters	Sym.	Min.	Typ.	Max.	Units	Conditions
Temperature Ranges						
Operating Temperature Range (T)	T _A	-40	—	+105	°C	Ordering Option L
		-40	—	+85	°C	Ordering Option I
Junction Operating Temperature	T _J	—	—	+150	°C	—
Storage Temperature Range	T _A	-55	—	+150	°C	—
Soldering Temperature Range	T _S	—	—	+260	°C	40 sec. max

Note 1: The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction to air (i.e., T_A, T_J, θ_{JA}). Exceeding the maximum allowable power dissipation will cause the device operating junction temperature to exceed the maximum +150°C rating. Sustained junction temperatures above +150°C can impact the device reliability.
