

# **Enclosed Yagi Antenna Series**

PCTEL's directional yagis can be used as bridge antennas between two networks or for point-to-point communications. They are field adjustable for vertical or horizontal polarization with matched principal plane beamwidths for optimum performance in either orientation. This design also provides improved front-to-back ratio and sidelobe suppression that reduces interference. All models feature a robust mounting structure for consistent performance regardless of weather conditions.

#### **Features**

- Field adjustable to allow vertical or horizontal polarity
- Optional articulating mount; allows precise adjustment of the antenna both vertically and horizontally
- Matched principal plane beamwidths with excellent sidelobe suppression and cross-polarization rejection of more than 20 dB provides superior signal quality with enhanced gain performance and minimal interference from neighboring radiators
- Attractive weather-proof radome constructed of UV-resistant material provides robust and trouble-free use in harsh outdoor environments
