

HI516

16 Channel/Differential 8 Channel CMOS High Speed Analog Multiplexer

The HI-516 is a monolithic dielectrically isolated, high speed, high performance CMOS analog multiplexer. It offers unique built-in channel selection decoding plus an inhibit input for disabling all channels.

The dual function of address input A_3 enables the HI-516 to be user programmed either as a single ended 16-channel multiplexer by connecting 'out A' to 'out B' and using A_3 as a digital address input, or as an 8-channel differential multiplexer by connecting A_3 to the V- supply. The substrate leakages and parasitic capacitances are reduced substantially by using the Harris Dielectric Isolation process to achieve optimum performance in both high and low level signal applications. The low output leakage current ($I_{DOFF} < 100\text{pA}$ at $+25^\circ\text{C}$) and fast settling ($I_{SETTLE} = 800\text{ns}$ to 0.01 %) characteristics of the device make it an ideal choice for high speed data acquisition systems, precision instrumentation, and industrial process control.

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All re-creations are done with the approval of the Original Component Manufacturer (OCM).

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-35835
 - Class Q Military
 - Class V Space Level
- Qualified Suppliers List of Distributors (QSLD)
 - Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OCM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

FOR REFERENCE ONLY

16 Channel/Differential 8 Channel CMOS High Speed Analog Multiplexer

December 1993

Features

- Access Time (Typical) 130ns
- Settling Time 250ns (0.1%)
- Low Leakage (Typical)
 - $I_{S(OFF)}$ 10pA
 - $I_{D(OFF)}$ 30pA
- Low Capacitance (Max)
 - $C_{S(OFF)}$ 10pF
 - $C_{D(OFF)}$ 25pF
- Off Isolation at 500kHz 55dB (Min)
- Low Charge Injection Error 20mV
- Single Ended to Differential Selectable (SDS)
- Logic Level Selectable (LLS)

Applications

- Data Acquisition Systems
- Precision Instrumentation
- Industrial Control

Description

The HI-516 is a monolithic dielectrically isolated, high speed, high performance CMOS analog multiplexer. It offers unique built-in channel selection decoding plus an inhibit input for disabling all channels. The dual function of address input A_3 enables the HI-516 to be user programmed either as a single ended 16-channel multiplexer by connecting 'out A' to 'out B' and using A_3 as a digital address input, or as an 8-channel differential multiplexer by connecting A_3 to the V- supply. The substrate leakages and parasitic capacitances are reduced substantially by using the Harris Dielectric Isolation process to achieve optimum performance in both high and low level signal applications. The low output leakage current ($I_{DOFF} < 100pA$ at $+25^\circ C$) and fast settling ($t_{SETTLE} = 800ns$ to 0.01%) characteristics of the device make it an ideal choice for high speed data acquisition systems, precision instrumentation, and industrial process control.

For MIL-STD-883 compliant parts, request the HI-516/883 data sheet.

NOTES:

- V_{DD}/LLS pin = open or grounded for TTL compatibility. V_{DD}/LLS pin = V_{DD} for CMOS compatibility.
- At temperatures above +90°C, care must be taken to assure V_{IN} remains at least 1.0V below the V_{SUPPLY} for proper operation.
- $V_{IN} = \pm 10V$, $I_{OUT} = -100\mu A$.
- $V_{IN} = 0V$, $C_L = 100pF$, enable input pulse = 3V, $f = 500kHz$.
- $V_{EN} = 0.8V$, $V_S = 3V_{RMS}$, $f = 500kHz$, $C_L = 40pF$, $R_L = 1K$, Pin 3 grounded.
- $V_{EN} = +2.4V$.
