General Description

The HMC-C049 is a 7 - 14 GHz double balanced mixer which provides a low conversion loss, high isolation, and a wide IF bandwidth. This mixer does not require a DC bias and can operate with an LO power level of +9 dBm. The package is a hermetically sealed module that is assembled and tested to meet MIL-883-STD qualifications.

This product comes standard with three female SMA field replaceable connectors that can also be intercharged with blind mate SMP connectors or detached to allow direct connection of the I/O Pins to a microstrip or coplaner circuit.

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1	LO	This pin is DC coupled and matched to 50 Ohms.	2	IF	This pin is DC coupled. For applications not requiring operation to DC, this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source or sink more than 2 mA of current or part non-function and possible part failure will result.	3	RF	This pin is DC coupled and matched to 50 Ohms.
