

# TLC04/MF4A-50, TLC14/MF4A-100 BUTTERWORTH FOURTH-ORDER LOW-PASS SWITCHED-CAPACITOR FILTERS

SLAS021A – NOVEMBER 1986 – REVISED MARCH 1995

- **Low Clock-to-Cutoff-Frequency Ratio Error**  
TLC04/MF4A-50 . . .  $\pm 0.8\%$   
TLC14/MF4A-100 . . .  $\pm 1\%$
- **Filter Cutoff Frequency Dependent Only on External-Clock Frequency Stability**
- **Minimum Filter Response Deviation Due to External Component Variations Over Time and Temperature**
- **Cutoff Frequency Range From 0.1 Hz to 30 kHz,  $V_{CC\pm} = \pm 2.5$  V**
- **5-V to 12-V Operation**
- **Self Clocking or TTL-Compatible and CMOS-Compatible Clock Inputs**
- **Low Supply-Voltage Sensitivity**
- **Designed to be Interchangeable With National MF4-50 and MF4-100**

D OR P PACKAGE  
(TOP VIEW)

## description

The TLC04/MF4A-50 and TLC14/MF4A-100 are monolithic Butterworth low-pass switched-capacitor filters. Each is designed as a low-cost, easy-to-use device providing accurate fourth-order low-pass filter functions in circuit design configurations.

Each filter features cutoff frequency stability that is dependent only on the external-clock frequency stability. The cutoff frequency is clock tunable and has a clock-to-cutoff frequency ratio of 50:1 with less than  $\pm 0.8\%$  error for the TLC04/MF4A-50 and a clock-to-cutoff frequency ratio of 100:1 with less than  $\pm 1\%$  error for the TLC14/MF4A-100. The input clock features self-clocking or TTL- or CMOS-compatible options in conjunction with the level shift (LS) terminal.

The TLC04C/MF4A-50C and TLC14C/MF4A-100C are characterized for operation from 0°C to 70°C. The TLC04I/MF4A-50I and TLC14I/MF4A-100I are characterized for operation from -40°C to 85°C. The TLC04M/MF4A-50M and TLC14M/MF4A-100M are characterized over the full military temperature range of -55°C to 125°C.

AVAILABLE OPTIONS

| T <sub>A</sub> | CLOCK-TO-CUTOFF<br>FREQUENCY RATIO | PACKAGE              |                    |
|----------------|------------------------------------|----------------------|--------------------|
|                |                                    | SMALL OUTLINE<br>(D) | PLASTIC DIP<br>(P) |
| 0°C to 70°C    | 50:1                               | TLC04CD/MF4A-50CD    | TLC04CP/MF4A-50CP  |
|                | 100:1                              | TLC14CD/MF4A-100CD   | TLC14CP/MF4A-100CP |
| -40°C to 85°C  | 50:1                               | TLC04ID/MF4A-50ID    | TLC04IP/MF4A-50IP  |
|                | 100:1                              | TLC14ID/MF4A-100ID   | TLC14IP/MF4A-100IP |
| -55°C to 125°C | 50:1                               |                      | TLC04MP/MF4A-50MP  |
|                | 100:1                              |                      | TLC14MP/MF4A-100MP |

The D package is available taped and reeled. Add the suffix R to the device type (e.g., TLC04CDR/MF4A-50CDR).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

SLAS021A – NOVEMBER 1986 – REVISED MARCH 1995

## functional block diagram

## Terminal Functions

| TERMINAL NAME | NO. | I/O | DESCRIPTION  |
|---------------|-----|-----|--|
| AGND          | 6   | I   | Analog ground. The noninverting input to the operational amplifiers of the Butterworth fourth-order low-pass filter.   |
| CLKIN         | 1   | I   | Clock in. CLKIN is the clock input terminal for CMOS-compatible clock or self-clocking options. For either option, LS is at $V_{CC-}$ . For self-clocking, a resistor is connected between CLKIN and CLKR and a capacitor is connected from CLKIN to ground. |
| CLKR          | 2   | I   | Clock R. CLKR is the clock input for a TTL-compatible clock. For a TTL clock, LS is connected to midsupply and CLKIN can be left open, but it is recommended that it be connected to either $V_{CC+}$ or $V_{CC-}$ .   |
| FILTER IN     | 8   | I   | Filter input   |
| FILTER OUT    | 5   | O   | Butterworth fourth-order low-pass filter output  |
| LS            | 3   | I   | Level shift. LS accommodates the various input clocking options. For CMOS-compatible clocks or self-clocking, LS is at $V_{CC-}$ and for TTL-compatible clocks, LS is at midsupply.  |
| $V_{CC+}$     | 7   | I   | Positive supply voltage terminal   |
| $V_{CC-}$     | 4   | I   | Negative supply voltage terminal   |

**absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†**

|  |   |
|--|---|
| Supply voltage range, $V_{CC\pm}$ (see Note 1)               | ..... $\pm 7$ V   |
| Operating free-air temperature range, $T_A$ :                | TLC04C/MF4A-50C, TLC14C/MF4A-100C ..... $0^\circ\text{C}$ to $70^\circ\text{C}$   |
|  | TLC04I/MF4A-50I, TLC14I/MF4A-100I ..... $-40^\circ\text{C}$ to $85^\circ\text{C}$ |
|  | TLC04M/MF4A-50M, TLC14M/MF4A-100M ... $-55^\circ\text{C}$ to $125^\circ\text{C}$  |
| Storage temperature range, $T_{stg}$                         | ..... $-65^\circ\text{C}$ to $150^\circ\text{C}$                                  |
| Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds | ..... $260^\circ\text{C}$   |

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to the AGND terminal.

|   | TLC04I/MF4A-50I, TLC14I/MF4A-100I |                  | -40            | 85                |                  |
|   | TLC04M/MF4A-50M, TLC14M/MF4A-100M |                  | -55            | 125               |                  |

NOTES: 2. Above 250 kHz, the input clock duty cycle should be 50% to allow the operational amplifiers the maximum time to settle while processing analog samples.

3. The cutoff frequency is defined as the frequency where the response is 3.01 dB less than the dc gain of the filter.

**electrical characteristics over recommended operating free-air temperature range,  $V_{CC+} = 2.5$  V,  $V_{CC-} = -2.5$  V,  $f_{clock} \leq 250$  kHz (unless otherwise noted)**

SLAS021A – NOVEMBER 1986 – REVISED MARCH 1995

**APPLICATION INFORMATION**

$$f_{\text{clock}} = \frac{1}{RC \times \ln \left[ \left( \frac{V_{CC} - V_{IT-}}{V_{CC} - V_{IT+}} \right) \left( \frac{V_{IT+}}{V_{IT-}} \right) \right]}$$

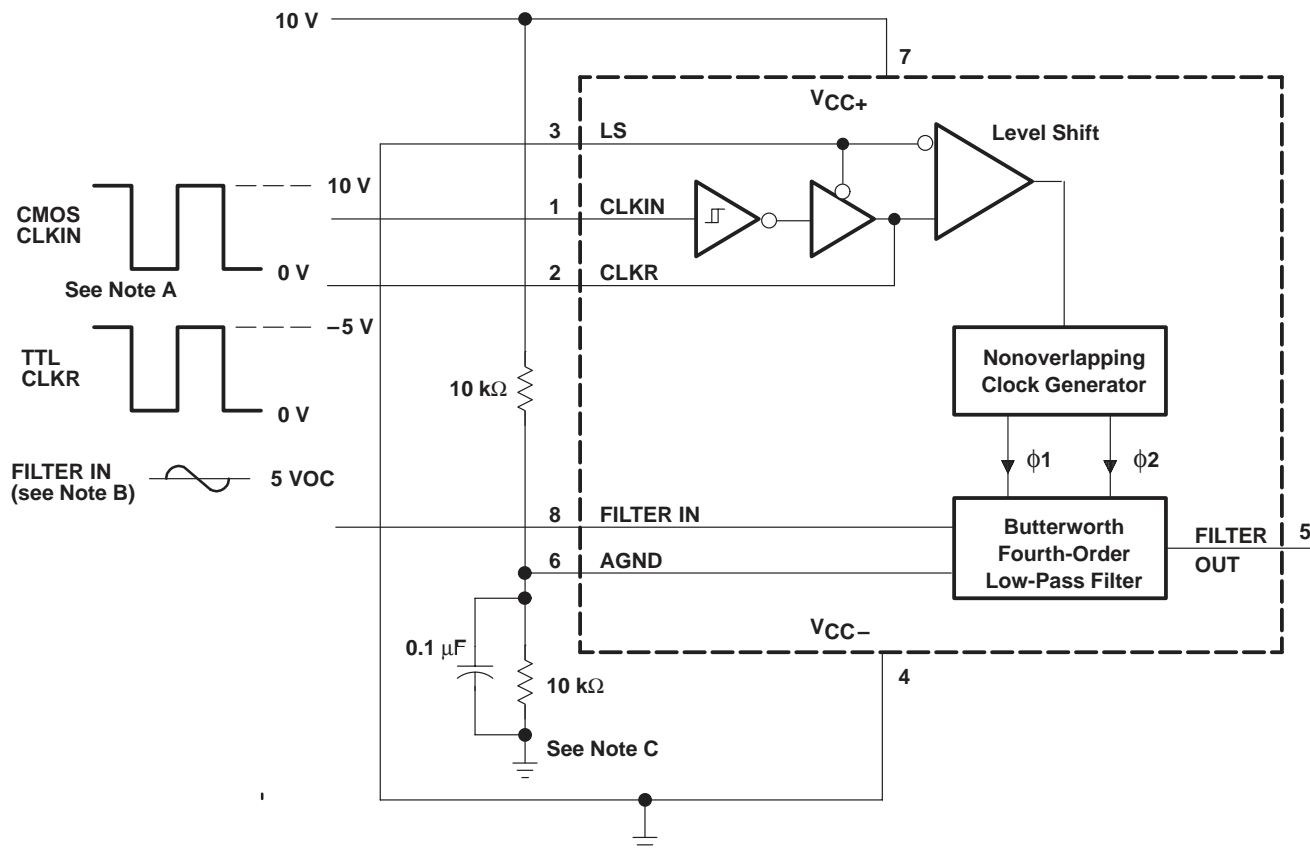

For  $V_{CC} = 10 \text{ V}$

$$f_{\text{clock}} = \frac{1}{1.69 RC}$$

**Figure 5. Self-Clocking Through Schmitt-Trigger Oscillator Dual-Supply Operation**

APPLICATION INFORMATION

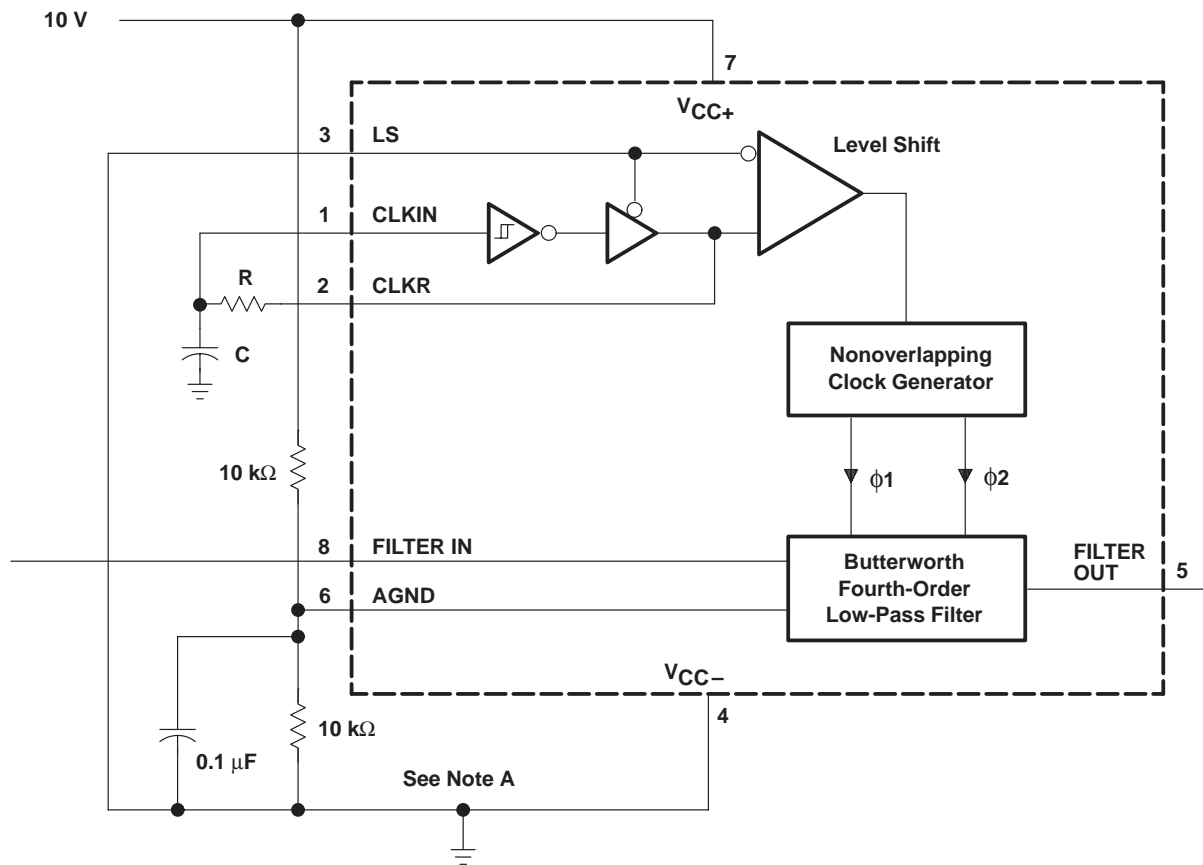

- NOTES: A. The external clock used must be of CMOS level because the clock is input to a CMOS Schmitt trigger.  
 B. The filter input signal should be dc-biased to midsupply or ac-coupled to the terminal.  
 C. AGND must be biased to midsupply.
