

## Monolithic 2-channel power management for high-definition ODD with integrated power switch

### Features

- 1.2 MHz DC-DC current mode PWM converter
- Input voltage from 4 V up to 6 V
- Step-down 3.3 V fixed output voltage, up to 700 mA load
- Step-up output current up to 500 mA
- 2% step-down output voltage tolerance
- 3% step-up output voltage tolerance
- Synchronous rectification
- Step-down power-save mode at light load
- Typical efficiency: 90%
- Internal soft-start
- Enable functions
- True cutoff function for step-up converter
- Integrated motor control power switch
- Uses tiny capacitors and inductors
- Available in QFN16 (4 x 4 mm)

### Description

The STODD03 is a 2-channel power management device intended for Blu-Ray applications based on high density optical storage devices. It integrates one step-down converter able to provide 3.3 V fixed output voltage up to 700 mA load, and one step-up converter to provide the power supply needed for the blue laser in applications where only 5 V input voltage is available. The step-up output voltage is adjustable in the range from 6.5 V to 14 V, with current capability up to 500 mA. Both step-down and step-up channels integrate low  $R_{DS\_ON}$  N-channel and P-channel MOSFETs, allowing high DC-DC efficiencies. The enable function with true

shutdown makes the step-up section particularly suitable for optical storage power management applications. Moreover, the STODD03 has a 1 A integrated power switch for motor control power supply. The high switching frequency allows the use of tiny SMD components. Low output ripple voltage is achieved thanks to the current mode PWM topology. The device includes soft-start control, thermal shutdown, and peak current limit to prevent damage due to accidental overload. The STODD03 is packaged in a QFN16 (4 x 4 mm).

Pin number	Symbol	Function
1	GND_P1	Power ground pin (ch1)
2	FB1	Step-up feedback pin (ch1)
3	V <sub>IN_A</sub>	Power supply for internal analog circuits
4	EN2	Step-down enable pin. Connect to V <sub>IN_A</sub> if not used.
5	PSW <sub>OUT</sub>	Power switch output pin. PSW <sub>OUT</sub> output current is not internally limited. Do not exceed 1 A max.
6	VIN_PSW	Power switch input
7	V <sub>IN_P</sub>	Power input voltage
8	SW2	Step-down switching pin (ch2)
9	GND_P2	Power ground (ch2)
10	FB2	Step-down feedback (ch2)
11	GND_A	Analog ground pin
12	OUT1	Step-up output voltage
13	EN-SW	Power switch enable pin active high (see <a href="#">Table 5</a> )
14	SW1	Step-up switching pin (ch1)
15	EN1	Step-up enable pin. Step-up is enabled if EN1 > 1.2 V and $\overline{\text{EN-SW}}$ is set low (see also <a href="#">Table 6: Step-up EN1 and EN-SW truth table</a> ). When the step-up is disabled, no current will flow to the load thanks to the true-shutdown function.

Table 7. List of external components (1)

Component	Value	Recommended part number
C1, C2, C3	10 $\mu$ F	Murata, GRM21BR61A106KE19L
C4, C5	22 $\mu$ F	Murata, GRM32ER61C226KE20L
L1	4.7 $\mu$ H	Coilcraft, LPS6225-472MLB
L2	3.3 $\mu$ H	Coilcraft, LPS4018-332MLB
R1, R2	33 k $\Omega$ , 3.3 k $\Omega$	$V_{OUT1} = 8.8 \text{ V}^{(2)}$

- The components listed above refer to a typical applications circuit. Operation of the STODD03 is not limited to the choice of these external components. If a different solution is used, it is recommended to validate the suitability of the external components by thoroughly testing the application on a PCB evaluation board.
- R1 and R2 are calculated according to the following formula:  
 $R1 = R2 \times [(V_{OUT1} / V_{FB1}) - 1]$ . Resistors in the range of 1 k to 50 k are recommended.
