Item description

This analog input module directly connects to two thermocouples. Internal electrical isolation allows operation of grounded sensors.

The module automatically linearizes the entire temperature range.

Cold junction compensation mitigates the clamping unit offset voltage over the 0–55°C operating range.

A line break is indicated by a red LED. A green LED indicates readiness for operation and error-free communication with the coupler.

The shield directly connects to the DIN-rail.

Subject to changes. Please also observe the further product documentation!

Configuring WAGO Ethernet with National Instruments LabVIEW via Modbus/TCP (a201602)	1.1.1 2005 年3月9日	zip 1.6 MB	Download
---	---------------------	---------------	----------

The purpose of this document is to provide step-by-step procedures for configuring National Instruments LabVIEW for direct communications with WAGO Ethernet I/O. The procedures that follow illustrate solutions for a direct communication between LabVIEW and the WAGO-I/O without additional protocols or proxies. This document provide two different ways to reach this goal. 1.) Calling the WAGO-Modbus-Driver "MBT.dll" from LabVIEW. 2.) Build your own socketbased protocol implementation.

Subject to changes. Please also observe the further product documentation!

Both ways have its advantages, that's mean the comfort supplied by the "MBT.dll" is payed by an increased CPU-usage, but both solution are up to 20 times faster then an OPC based solution.
