EVB-USB5816 Evaluation Kit
User's Guide

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.

- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.

- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.

- Microchip is willing to work with the customer who is concerned about the integrity of their code.

- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

NOTES:

Preface

NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our website (www.microchip.com) to obtain the latest documentation available.

Documents are identified with a "DS" number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is "DSXXXXXA", where "XXXXX" is the document number and "A" is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE online help. Select the Help menu, and then Topics to open a list of available online help files.

INTRODUCTION

This chapter contains general information that will be useful to know before using the EVB-USB5816 Evaluation Kit. Items discussed in this chapter include:

• Document Layout
• Conventions Used in this Guide
• Warranty Registration
• The Microchip Website
• Development Systems Customer Change Notification Service
• Customer Support
• Document Revision History

DOCUMENT LAYOUT

This document describes how to use the EVB-USB5816 Evaluation Kit as a demonstration platform optimized for portable applications.The manual layout is as follows:

• **Chapter 1. "Overview"** – This chapter shows a brief description of the EVB-USB5816 Evaluation Kit.
• **Chapter 2. "Getting Started"** – This chapter provides information about setup and operation of the EVB-USB5816 Evaluation Kit.
• **Chapter 3. "Hardware Configuration"** – This chapter includes information about the hardware configuration of the EVB-USB5816 Evaluation Kit.
• **Appendix A. "Schematics"** – This appendix shows the EVB-USB5816 Evaluation Kit schematics.
• **Appendix B. "Bill of Materials"** – This appendix includes the EVB-USB5816 Evaluation Kit Bill of Materials (BOM).
• **Appendix C. "Silk Screens"** – This appendix includes the EVB-USB5816 Evaluation Kit silk screen.

CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

DOCUMENTATION CONVENTIONS

Description	Represents	Examples
Arial font:		
Italic characters	Referenced books	*MPLAB® IDE User's Guide*
	Emphasized text	...is the *only* compiler...
Initial caps	A window	the Output window
	A dialog	the Settings dialog
	A menu selection	select Enable Programmer
Quotes	A field name in a window or dialog	"Save project before build"
Underlined, italic text with right angle bracket	A menu path	*File>Save*
Bold characters	A dialog button	Click **OK**
	A tab	Click the **Power** tab
N'Rnnnn	A number in verilog format, where N is the total number of digits, R is the radix and n is a digit.	4'b0010, 2'hF1
Text in angle brackets < >	A key on the keyboard	Press <Enter>, <F1>
Courier New font:		
Plain Courier New	Sample source code	`#define START`
	Filenames	`autoexec.bat`
	File paths	`c:\mcc18\h`
	Keywords	`_asm, _endasm, static`
	Command-line options	`-Opa+, -Opa-`
	Bit values	`0, 1`
	Constants	`0xFF, 'A'`
Italic Courier New	A variable argument	`file.o`, where `file` can be any valid filename
Square brackets [ ]	Optional arguments	`mcc18 [options] file [options]`
Curly brackets and pipe character: { | }	Choice of mutually exclusive arguments; an OR selection	`errorlevel {0|1}`
Ellipses...	Replaces repeated text	`var_name [, var_name...]`
	Represents code supplied by user	`void main (void) { ... }`

WARRANTY REGISTRATION

Please complete the enclosed Warranty Registration Card and mail it promptly. Sending the Warranty Registration Card entitles users to receive new product updates. Interim software releases are available at the Microchip website.

THE MICROCHIP WEBSITE

Microchip provides online support via our website at www.microchip.com. This website is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the website contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

DEVELOPMENT SYSTEMS CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip website at www.microchip.com, click on Customer Change Notification and follow the registration instructions.

The Development Systems product group categories are:

- **Compilers** – The latest information on Microchip C compilers, assemblers, linkers and other language tools. These include all MPLABCC compilers; all MPLAB assemblers (including MPASM™ assembler); all MPLAB linkers (including MPLINK™ object linker); and all MPLAB librarians (including MPLIB™ object librarian).
- **Emulators** – The latest information on Microchip in-circuit emulators.This includes the MPLAB$^{®}$ REAL ICE and MPLAB ICE 2000 in-circuit emulators.
- **In-Circuit Debuggers** – The latest information on the Microchip in-circuit debuggers. This includes MPLAB ICD 3 in-circuit debuggers and PICkit 3 debug express.
- **MPLAB IDE** – The latest information on Microchip MPLAB IDE, the Windows Integrated Development Environment for development systems tools. This list is focused on the MPLAB IDE, MPLAB IDE Project Manager, MPLAB Editor and MPLAB SIM simulator, as well as general editing and debugging features.
- **Programmers** – The latest information on Microchip programmers. These include production programmers such as MPLAB REAL ICE in-circuit emulator, MPLAB ICD 3 in-circuit debugger and MPLAB PM3 device programmers. Also included are nonproduction development programmers such as PICSTART Plus and PIC-kit 2 and 3.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

• Distributor or Representative
• Local Sales Office
• Field Application Engineer (FAE)
• Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the website at:
http://www.microchip.com/support

DOCUMENT REVISION HISTORY

Chapter 1. Overview

1.1 INTRODUCTION

The EVB-USB5816 Evaluation Kit is a demonstration and evaluation platform that provides the necessary requirements and interface options for evaluating the EVB-USB5816, a 6-port SuperSpeed (SS) USB SmartHub™ IC on a four-layer RoHS-compliant Printed Circuit Board (PCB). This allows users to gain an understanding of the product and accelerate the integration of the EVB-USB5816 into their design.

The EVB-USB5816 is compliant with the USB 2.0 Hi-Speed (HS), Full-Speed (FS), and Low-Speed (LS) USB signaling. The EVB-USB5816 is also compliant with USB 3.2 Gen1 on the upstream port and on downstream ports 1 to 5.

The evaluation platform supports six downstream ports: one USB3.1 Gen1 Type-C® port, four USB3.1 Gen1 ports and one USB2.0 port with Type-A connectors. The EVB-USB5816 platform also supports battery charging on all six downstream ports (maximum of 10A at any one time. See Note 1).

The EVB-USB5816 has two configurations for operation through internal default settings and supports custom configurations through the external 16-Mbit SPI Flash device.

The EVB-USB5816 demonstrates driver compatibility with Microsoft® Windows® 10, Windows 8.x, Windows 7, Windows XP, Mac OS® X 10.4+, and Linux® hub drivers.

For more information about EVB-USB5816, see **Section 1.2 "Features"**.

> **Note 1:** Requires a 12V, 85W supply.

1.2 FEATURES

- Microchip's PortSwap, PHYBoost™, and VariSense™ technologies
- EVB-USB5816 in a 100-pin QFN RoHS-compliant package
- USB 3.2 compliant (Gen1 operation)
- USB 2.0 compliant (HS, FS, and LS operation)
- 5V-tolerant USB pins
- Self-powered operation
- USB Gen1 Type-B upstream port
- Six downstream USB ports:
    - Five Gen1 downstream ports (Port 1 is a Type-C port.)
    - One USB 2.0-only downstream port
- All downstream ports support individual port power and overcurrent sense.
- All downstream ports can be enabled for battery charging with the battery charging select switches on SW3 (BC1.2 or SE1, 2.1A maximum per port)
- Onboard SPI Flash for external downloadable firmware
- Operates from a single-voltage (+12.0V, regulated) external power supply
- Onboard 25 MHz crystal or oscillator input
- Single onboard +5.2V, 15A regulator
- Single onboard +3.3V, 0.5A regulator

- Single onboard +1.2V, 2A regulator
- Port Power LED indicators
- SPI Flash activity blue LED indicator
- Reset red LED indicator
- Green LED indicators for 5V, 3.3V, and 1.2V regulator outputs
- Terminal block connector for use with an external 12 VDC bench supply
- Barrel connector for use with a Microchip 12V power supply
- Removable or non-removable downstream ports options can be configured with select switches on SW4.
- Bridge peripheral functions:
  - USB-to-I^{2}C

1.5 ACRONYMS AND DEFINITIONS

TABLE 1-1: ACRONYMS AND DEFINITIONS

Acronym	Definition
BC1.2	The latest USB-IF specified USB battery charging standard
CDP	Charging Downstream Port, a BC1.2-compliant port that allows simultaneous USB data and USB charging
DCP	Dedicated Charging Port, a BC1.2-compliant port which is only capable of USB charging (no data)
DFP	Downstream Facing Port
EVB	Evaluation Board
OTP	One-Time-Programmable Memory
SDP	Standard Downstream Port, a standard USB port with no high-current battery charging capabilities
SE1	A type of Battery Charging (non-USB compliant) which sets both the USB D+/D– to logical high state (a.k.a. "SE1" or "Single-Ended 1" state) to communicate a charging capability
Type-C	Reversible USB Connector
USB-IF	USB Integrators Forum, a collection of corporate sponsored members responsible for developing USB specifications
Gen1	USB Specification 3.1 Gen1

Chapter 2. Getting Started

2.1 INTRODUCTION

The Microchip EVB-USB5816 Evaluation Kit is designed for flexible configuration solutions. It can be configured via default internal register settings, via a downloadable external firmware to an onboard SPI Flash (OTP memory), via SMBus, or via the onboard configuration switches. When configured with the default internal register settings, the device operates as a USB 3.1 Gen1 hub with one upstream Gen1 port, five downstream Gen1 ports, and one downstream USB 2.0 port, with Microchip's standard VID/PID/DID settings.

Microchip provides a comprehensive software programming tool, MPLAB® Connect Configurator (MPLABCC), for configuring EVB-USB5816 functions, registers, and OTP memory. EVB-USB5816 requires MPLABCC version 2.1.0 or greater.

For additional information on the MPLABCC programming tool, refer to Software Libraries within the Microchip EVB-USB5816 product page at www.microchip.com/USB5816.

2.2 KIT CONTENTS

The EVB-USB5816 Evaluation Kit includes the basic equipment necessary for evaluation. The items included in the kit are:

• EVB-USB5816 Evaluation Board
• Type-A to Type-B USB cable

2.3 QUICK START

Perform the following steps to quickly start using the board:

1. Connect a 12V power supply to the barrel connector (J4) or the terminal block (J3) on the EVB-USB5816.
2. Using a Type-A to Type-B USB cable, connect the EVB-USB5816 to a USB host via the upstream "Port 0" USB Type-B receptacle (J7).
3. Devices may now be connected to any of the downstream ports to enumerate and use those devices with the USB host.
4. To perform additional configuration or evaluate specific features, launch the MPLABCC software on your USB host or manipulate the included hardware configuration options detailed in the next sections.

NOTES:

Chapter 3. Hardware Configuration

3.1 HARDWARE CONFIGURATION OPTIONS

Figure 3-1 shows the top view of the EVB-USB5816.

FIGURE 3-1: **EVB-USB5816 REV B (TOP VIEW)**
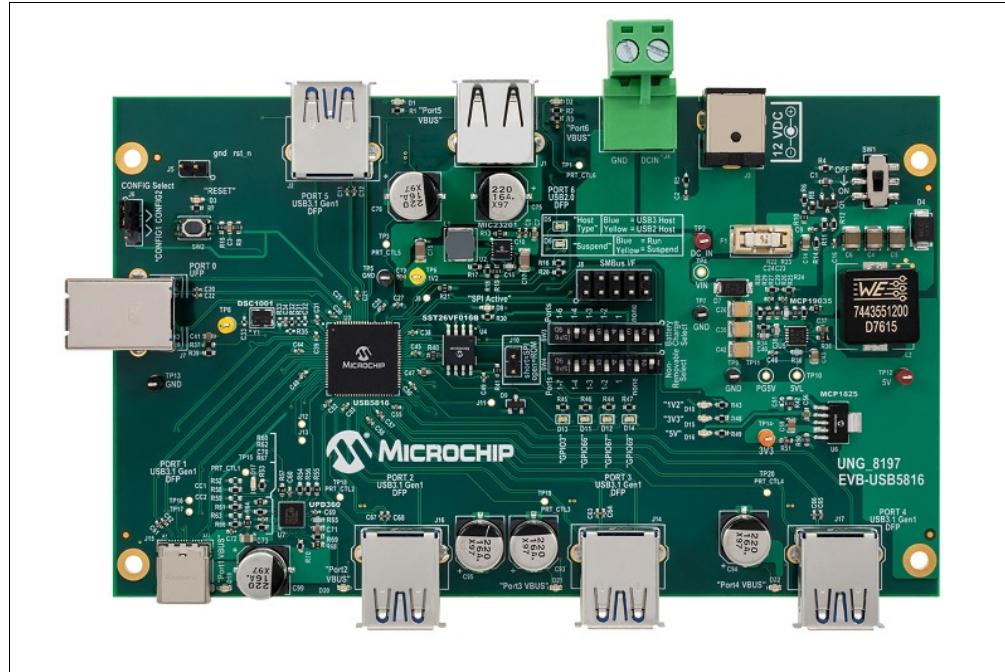

3.1.1 Configuration

3.1.1.1 EXTERNAL SPI FLASH

Upon power-up, the EVB-USB5816 first searches an external SPI Flash device and a valid signature in the Firmware image. If a valid firmware image is found, the code execution is initiated from the external SPI Flash device.

To enable operation from the SPI device, install shunts to pins 1 and 2 of J6. When code is executing from an SPI ROM device, a blue LED "SPI-ACTIVE" (D8) illuminates.

Note 1:	CFG_BC and CFG_Non-Rem options are deselected when the SPI shunt is installed on J6. When operating in SPI mode, all configuration is handled by the code executing from the SPI ROM device.
2:	If the SPI Flash is not properly programmed or has an invalid signature, the USB5816 reverts to internal defaults even if the SPI ROM is selected.

3.1.1.2 SMBUS

If an SPI Flash device is not found, the firmware checks if SMBus is enabled.

To select SMBus configuration, select OPTION2 from the CFG_STRAP header, shunt pins 1-2 of J6. The SMBus signals may be accessed at J8, where pin 1 is the clock and pin 3 is data (pin 2 is ground).

If configuration OPTION2 is selected, and SMBus is enabled (i.e., SMBusclock and data are pulled up), the EVB-USB5816 waits indefinitely for data from the SMBus interface and will not enumerate to the USB host until the special USB Attach command is sent.

See the *AN2316 Configuration Options for the USB58xx and USB59xx* for additional details.

3.1.1.3 INTERNAL DEFAULT CONFIGURATIONS WITH STRAPPING OPTIONS

When the EVB-USB5816 does not detect a valid SPI Flash image and does not look for SMBus configuration upon power-up, the EVB-USB5816 uses internal default register settings. It also sets the Vendor ID, Product ID, Language ID, and Device ID, and additional settings from the internal ROM code.

If configuration is not done through SPI or SMBus, additional configuration is available through two functions: CFG_BC_EN and CFG_NON-REM. The controls are configured by selecting one of the six resistor values for each pin. The EVB-USB5816 demonstrates two of the six possible resistor values for each of CFG_BC_EN and CFG_NON-REM. These straps are sensed by the EVB-USB5816 device at power-on to determine the resultant configuration of the device.

To select the CFG_BC_EN and CFG_NON-REM modes, switches must be set on SW3 and SW4.

To use the battery charging strap options or the NON_REM strap options, refer to the strap select table on schematic page 2. (see Figure A-2.)

3.1.2 Power Source – Self Powered

The EVB-USB5816 only supports self-powered operation. Power is supplied through one +12.0V regulated external power supply. The power supply is connected to the 2.5 mm connector J1 on the board. Alternatively, an external voltage can be supplied to the screw terminal "12V" (J2). The +12.0V feeds a 15A regulator that outputs +5.2V (nominal) across the board and also supplies the +3.3V regulator and the 1.2V regulator.

CAUTION
The supplied 12.0V external power supply cannot support simultaneous battery charging on all downstream ports. Use a higher power supply if the required test use case exceeds the power capability of the supply. Failure to heed to this warning could result in damage to the 12.0V external power supply.

3.1.3 Downstream Port Power Control

USB power to the four downstream ports is controlled via port power controllers with auto-discharge functionality. All downstream ports support BC 1.2 battery charging.

The downstream USB Type-C® port is capable of up to 3A of current at 5V. The remaining five downstream USB Type-A ports are capable of up to 2.1A at 5V.

3.1.4 USB Type-C® Port

The EVB-USB5816 has a single USB3.1 Gen 1 PHY for Type-C support. This eliminates the need for an external multiplexer. The EVB-USB5816 also features integrated Type-C control signal (CC) detection to determine when and in what orientation a USB Type-C® attach has been made. It powers only the USB3.1 Gen 1 PHY needed for USB communication. To reduce power, the EVB-USB5816 powers down unused USB3.1 Gen 1 PHYs. In the case where no USB Type-C attach is detected, the USB3.1 Gen 1 PHY associated with that port is powered down.

3.1.5 LED Indicators

Table 3-1 describes the LED indicators on the EVB-USB5816 Evaluation Kit.

TABLE 3-1:   EVB-USB5816 LED INDICATORS

Ref. Des.	Label	Description
D1	VBUS5	Illuminates when 5V to upstream PORT5 VBUS is present
D2	VBUS6	Illuminates when 5V to upstream PORT6 VBUS is present
D3	RESET	The RST_N signal is asserted.
D5	Host Type	Indicates Host Type: - Yellow = USB2 Host - Blue = USB3 Host
D6	SUSPEND	Suspend Indicator: - Yellow = Run - Blue = Suspend
D8	SPI-ACTIVE	Indicates SPI Flash Memory activity
D10	1V2	Illuminates when 1.2V is present from the 3.3V voltage regulator
D11	GPIO66	GPIO66 Indicator: - Yellow = Output Low - Blue = Output High - Off = Input (Hi-Z)
D12	GPIO67	GPIO67 Indicator: - Yellow = Output Low - Blue = Output High - Off = Input (Hi-Z)
D13	GPIO3	GPIO3 Indicator: - Yellow = Output Low - Blue = Output High - Off = Input (Hi-Z)
D14	GPIO69	GPIO69 Indicator: - Yellow = Output Low - Blue = Output High - Off = Input (Hi-Z)
D15	3V3	Illuminates when 3.3V is present from the 3.3V voltage regulator
D16	5V	Illuminates when 5V is present from the 3.3V voltage regulator
D19	VBUS1	Illuminates when 5V to upstream PORT1 VBUS is present
D20	VBUS2	Illuminates when 5V to upstream PORT2 VBUS is present
D21	VBUS3	Illuminates when 5V to upstream PORT3 VBUS is present
D22	VBUS4	Illuminates when 5V to upstream PORT4 VBUS is present

3.1.6   Switches

Table 3-2 describes the switches on the EVB-USB5816.

TABLE 3-2:   EVB-USB5816 SWITCH DESCRIPTIONS

Ref. Des.	Label	Description
SW1	ON/OFF	Connects or disconnects the 12 VDC supply
SW2	RESET	Momentary push-button switch to assert RST_N

3.1.7   Connector Descriptions

Table 3-3 describes the connectors included on the PCB.

TABLE 3-3:   EVB-USB5816 CONNECTOR DESCRIPTIONS

Ref. Des.	Type	Label	Description
J1	USB Type-A Connector	PORT6	Downstream Type-A USB 2.0 Port 6 USB connection
J2	USB Type-A Connector	PORT5	Downstream Type-A Gen1 Port 5 USB connection
J3	Barrel Jack	12VDC	12 VDC supply connection (center pin positive)
J4	2-pin terminal block	—	Alternative 12 VDC supply connection. Pin 1 is positive.
J5	2x1 Header	Ext.Reset	Connection for an external reset switch
J6	1x3 Header	CONGFIG SELECT	Configuration Select: - 1–2 = CONFIG2 - 2–3 = CONFIG1 - No Shunt = Not Allowed
J7	USB Type-B Connector	PORT0	Upstream Type-B Gen1 connection
