Shielded Drum Core Inductor

PA4330.XXXNLT Series

Height: 1.0mm Max

Footprint: 2.2mm x 1.8mm Max

Current Rating: up to 3.1A

Inductance Range: 0.47uH to 2.2uH

📀 Shielded magnetic circuit reduces leakage flux, Fe base metal core enables high saturation and metalized core termination results in excellent shock resistance

NOTES:

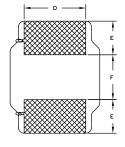

- 1. Actual temperature of the component during system operation (ambient plus temperature rise) must be within the standard operating range.
- 2. The rated current as listed is either the saturation current (20°C) or the heating current (40°C Rise) depending on which value is lower.
- 3. The saturation current is the current at which the initial inductance drops approximately 30% at the stated ambient temperature. This current is determined by placing the component in the specified
- ambient environment and applying a short duration pulse current (to eliminate self-heating effect)
- 4. The heating current is the DC current required to raise the component temperature by approximately 20°C or 40°C. Take note that the components' performance varies depending on the system conditions. It is suggested that the component be tested at the system level, to verify the temperature rise of the component during system operation.
- 5. Maximum voltage across terminals to be limited to <25Vdc.
