

WP154A4AVSSUREQBFZGW

T-1 3/4 (5 mm) Single-Level Circuit Board Indicator

DESCRIPTIONS

- The Hyper Red source color devices are made with AIGaInP on GaAs substrate Light Emitting Diode
- The Blue source color devices are made with InGaN Light Emitting Diode
- The Green source color devices are made with InGaN on Sapphire Light Emitting Diode
- · Electrostatic discharge and power surge could damage the LEDs
- · It is recommended to use a wrist band or anti-electrostatic glove when handling the LEDs
- · All devices, equipments and machineries must be electrically grounded

FEATURES

- · Pre-trimmed leads for pc mounting
- · White case enhances contrast ratio
- · High reliability life measured in years
- Housing UL rating: 94V-0
- Housing material: Type 66 nylon
- RoHS compliant

APPLICATIONS

- Status indicator
- Illuminator
- Signage applications
- Decorative and entertainment lighting
- Commercial and residential architectural lighting

ATTENTION

Observe precautions for handling electrostatic discharge sensitive devices

Notes

Notes: 1. 61/2 is the angle from optical centerline where the luminous intensity is 1/2 of the optical peak value. 2. Luminous intensity / luminous flux: +/-15%. 4. Luminous intensity and us is traceable to CE1272-2007 standards.

Luminous intensity value is traceable to CIE127-2007 standards.

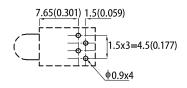

PACKAGE DIMENSIONS

Notes:

- 1. All dimensions are in millimeters (inches)
- Tolerance is ±0.25(0.01") unless otherwise noted.
 Lead spacing is measured where the leads emerge from the package.

4. The specifications, characteristics and technical data described in the datasheet are subject to change without prior notice

Notes:

1. The dominant wavelength (λd) above is the setup value of the sorting machine. (Tolerance λd : ±1nm.)

2. Forward voltage: 8.0 V.
 3. Wavelength value is traceable to CIE127-2007 standards.
 4. Excess driving current and / or operating temperature higher than recommended conditions may result in severe light degradation or premature failure.

RECOMMENDED WAVE SOLDERING PROFILE

- Notes: 1. Recommend pre-heat temperature of 105°C or less (as measured with a thermocouple attached to the LED pins) prior to immersion in the solder wave with a maximum solder bath temperature of 260°C
- 2. Peak wave soldering temperature between 245°C ~ 255°C for 3 sec (5 sec max).
- Do not apply stress to the epoxy resin while the temperature is above 65°C.
 Fixtures should not incur stress on the component when mounting and during soldering process.
- 5. SAC 305 solder alloy is recommended. 6. No more than one wave soldering pass.

PRECAUTIONS

Storage Conditions

- 1. Avoid continued exposure to the condensing moisture environment and keep the product away from rapid transitions in ambient temperature.
- 2. LEDs should be stored with temperature \leq 30°C and relative humidity < 60%.
- 3. Product in the original sealed package is recommended to be assembled within 72 hours of opening. Product in opened package for more than a week should be baked for 30 (+10/-0) hours at 85 ~ 100°C.

LED Mounting Method

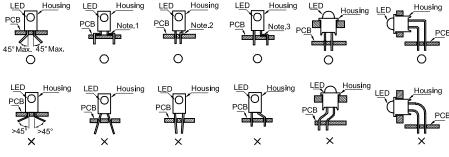

1. The lead pitch of the LED must match the pitch of the mounting holes on the PCB during component placement. Lead-forming may be required to insure

the lead pitch matches the hole pitch.

Refer to the figure below for proper lead

forming procedures. Note 1-3: Do not route PCB trace in the contact area between the

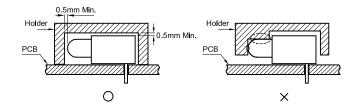

leadframe and the PCB to prevent short-circuits.

○ " Correct mounting method " x " Incorrect mounting method

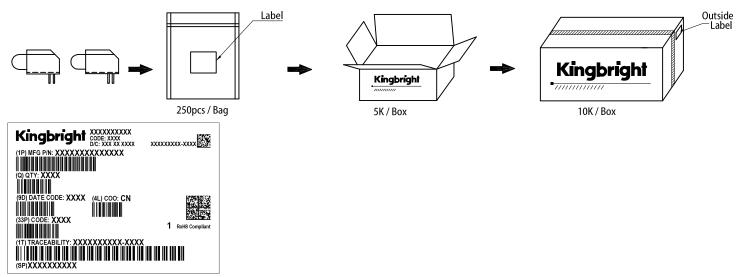

Lead Forming Procedures

- 1. During soldering, component covers and holders should leave clearance to avoid placing damaging stress on the LED during soldering.
- 2. The tip of the soldering iron should never touch the lens epoxy.
- 3. Through-hole LEDs are incompatible with reflow soldering.
- 4. If the LED will undergo multiple soldering passes or face other processes where the part may be subjected to intense heat, please check with Kingbright for compatibility.
