FEATURES

- **RS-232 Bus-Pin ESD Protection Exceeds ±15 kV Using Human-Body Model (HBM)**
- **Meets or Exceeds the Requirements of TIA/EIA-232-F and ITU v.28 Standards**
- **Operates at 5-V V_{CC} Supply**
- **Four Drivers and Five Receivers**
- **Operates up to 120 kbit/s**
- **Low Supply Current in Shutdown Mode . . . 1 µA Typical**
- **External Capacitors . . . 4 × 0.1 µF**
- **Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II**

APPLICATIONS

- **Battery-Powered Systems**
- **PDAs**
- **Notebooks**
- **Laptops**
- **Palmtop PCs**
- **Hand-Held Equipment**

DESCRIPTION/ORDERING INFORMATION

The TRS211 device consists of four line drivers, five line receivers, and a dual charge-pump circuit with ±15-kV ESD protection pin to pin (serial-port connection pins, including GND). The device meets the requirements of TIA/EIA-232-F and provides the electrical interface between an asynchronous communication controller and the serial-port connector. The charge pump and four small external capacitors allow operation from a single 5-V supply. The devices operate at data signaling rates up to 120 kbit/s and a maximum of 30-V/µs driver output slew rate.

The TRS211 has both shutdown (SHDN) and enable control ($\overline{EN}$). In shutdown mode, the charge pumps are turned off, V+ is pulled down to V_{CC}, V– is pulled to GND, and the transmitter outputs are disabled. This reduces supply current typically to 1 µA. $\overline{EN}$ is used to put the receiver outputs into the high-impedance state to allow wired-OR connection of two RS-232 ports. It has no effect on the RS-232 drivers or the charge pumps.

ORDERING INFORMATION

T_A	PACKAGE[1][2]		ORDERABLE PART NUMBER	TOP-SIDE MARKING

Absolute Maximum Ratings[1]

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CC}	Supply voltage range[2]		−0.3	6	V
V+	Positive charge pump voltage range[2]		V_{CC} − 0.3	14	V
V−	Negative charge pump voltage range[2]		0.3	−14	V
V_I	Input voltage range	Drivers	−0.3	V+ + 0.3	V
		Receivers		±30	
V_O	Output voltage range	Drivers	V− − 0.3	V+ + 0.3	V
		Receivers	−0.3	V_{CC} + 0.3	
	Short-circuit duration	DOUT		Continuous	
θ_{JA}	Package thermal impedance[3][4]	DB package		62	°C/W
		DW package		46	
T_J	Operating virtual junction temperature			150	°C
T_{stg}	Storage temperature range		−65	150	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltages are with respect to network GND.
(3) Maximum power dissipation is a function of T_J(max), θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(max) − T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability.
(4) The package thermal impedance is calculated in accordance with JESD 51-7.

Recommended Operating Conditions[1]

See Figure 6

			MIN	NOM	MAX	UNIT
	Supply voltage		4.5	5	5.5	V

	Control high-level input voltage	$\overline{EN}$, SHDN	2.4			
V_{IL}	Driver and control low-level input voltage	DIN, $\overline{EN}$, SHDN			0.8	V
V_I	Driver and control input voltage	DIN, $\overline{EN}$, SHDN	0		5.5	V
	Receiver input voltage		−30		30	
T_A	Operating free-air temperature	TRS211C	0		70	°C
		TRS211I	−40		85	

(1) Test conditions are C1–C4 = 0.1 µF at V_{CC} = 5 V ± 0.5 V.

Electrical Characteristics[1]

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP[2]	MAX	UNIT
I_{CC}	Supply current	No load,	See Figure 6		14	20	mA
	Shutdown supply current	T_A = 25°C,	See Figure 1		1	10	µA

(1) Test conditions are C1–C4 = 0.1 µF at V_{CC} = 5 V ± 0.5 V.
(2) All typical values are at V_{CC} = 5 V, and T_A = 25°C.

DRIVER SECTION

Electrical Characteristics[1]

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (see Figure 4)

PARAMETER		TEST CONDITIONS		MIN	TYP[2]	MAX	UNIT
V_{OH}	High-level output voltage	All DOUT at R_L = 3 kΩ to GND		5	9		V
V_{OL}	Low-level output voltage	All DOUT at R_L = 3 kΩ to GND		−5	−9		V
I_{IH}	Driver high-level input current	DIN = V_{CC}			15	200	μA
	Control high-level input current	$\overline{EN}$, SHDN = V_{CC}			3	10	
I_{IL}	Driver low-level input current	DIN = 0 V			−15	−200	μA
	Control low-level input current	$\overline{EN}$, SHDN = 0 V			−3	−10	
I_{OS}	Short-circuit output current[3]	V_{CC} = 5.5 V,	V_O = 0 V		±10	±60	mA
r_o	Output resistance	V_{CC}, V+, and V− = 0 V,	V_O = ±2 V	300			Ω

(1) Test conditions are C1–C4 = 0.1 μF at V_{CC} = 5 V ± 0.5 V.
(2) All typical values are at V_{CC} = 5 V, and T_A = 25°C.
(3) Short-circuit durations should be controlled to prevent exceeding the device absolute power dissipation ratings, and not more than one output should be shorted at a time.

Switching Characteristics[1]

APPLICATION INFORMATION
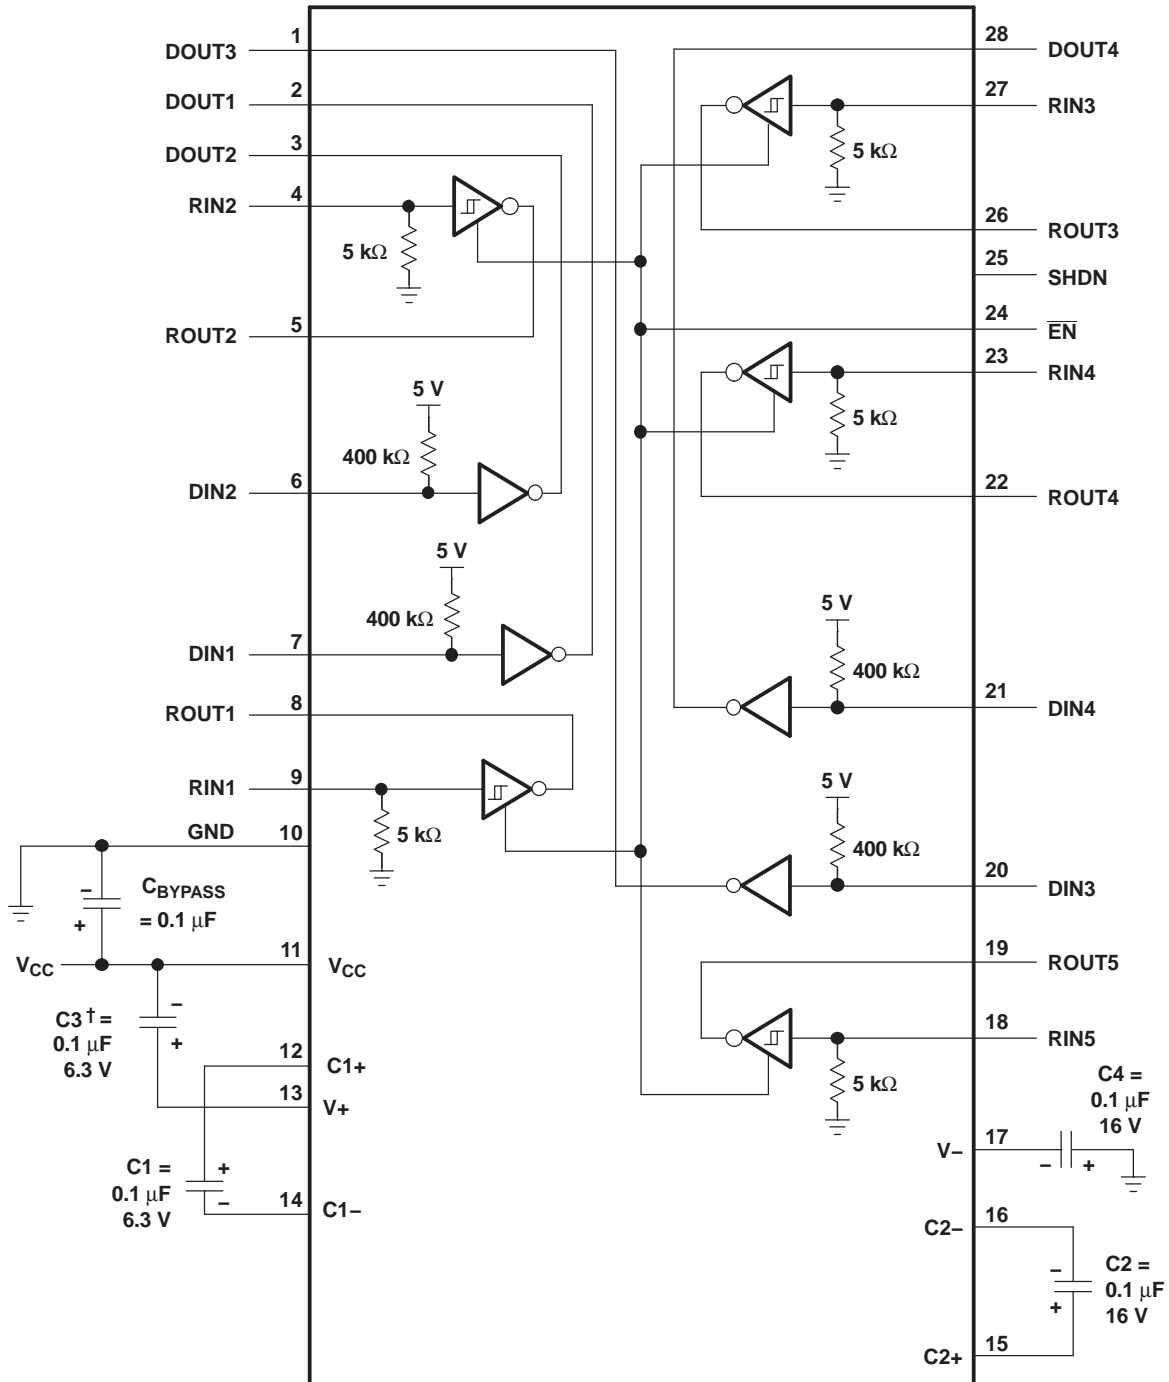

† C3 can be connected to V_{CC} or GND.

A.   Resistor values shown are nominal.

B.   Nonpolarized ceramic capacitors are acceptable. If polarized tantalum or electrolytic capacitors are used, they should
     be connected as shown.

Figure 6. Typical Operating Circuit and Capacitor Values

TEXAS INSTRUMENTS
www.ti.com

APPLICATION INFORMATION (continued)

Capacitor Selection

The capacitor type used for C1–C4 is not critical for proper operation. The TRS211 requires 0.1-µF capacitors, although capacitors up to 10 µF can be used without harm. Ceramic dielectrics are suggested for the 0.1-µF capacitors. When using the minimum recommended capacitor values, make sure the capacitance value does not degrade excessively as the operating temperature varies. If in doubt, use capacitors with a larger (e.g., 2×) nominal value. The capacitors' effective series resistance (ESR), which usually rises at low temperatures, influences the amount of ripple on V+ and V−.

Use larger capacitors (up to 10 µF) to reduce the output impedance at V+ and V−.

Bypass V_{CC} to ground with at least 0.1 µF. In applications sensitive to power-supply noise generated by the charge pumps, decouple V_{CC} to ground with a capacitor the same size as (or larger than) the charge-pump capacitors (C1–C4).

Electrostatic Discharge (ESD) Protection

TI TRS211 devices have standard ESD protection structures incorporated on the pins to protect against electrostatic discharges encountered during assembly and handling. In addition, the RS232 bus pins (driver outputs and receiver inputs) of these devices have an extra level of ESD protection. Advanced ESD structures were designed to successfully protect these bus pins against ESD discharge of ±15 kV when powered down.

ESD Test Conditions

ESD testing is stringently performed by TI, based on various conditions and procedures. Please contact TI for a reliability report that documents test setup, methodology, and results.

Human-Body Model (HBM)

The HBM of ESD testing is shown in Figure 7. Figure 8 shows the current waveform that is generated during a discharge into a low impedance. The model consists of a 100-pF capacitor charged to the ESD voltage of concern and subsequently discharged into the DUT through a 1.5-kΩ resistor.

Figure 7. HBM ESD Test Circuit

TRS211
5-V MULTICHANNEL RS-232 LINE DRIVER/RECEIVER
WITH ±15-kV ESD PROTECTION
SLLS811–JULY 2007

TEXAS INSTRUMENTS
www.ti.com

APPLICATION INFORMATION (continued)
Figure 8. Typical HBM Current Waveform

Machine Model (MM)

The MM ESD test applies to all pins, using a 200-pF capacitor with no discharge resistance. The purpose of the MM test is to simulate possible ESD conditions that can occur during the handling and assembly processes of manufacturing. In this case, ESD protection is required for all pins, not just RS-232 pins. However, after PC board assembly, the MM test no longer is as pertinent to the RS-232 pins.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TRS211CDB	LIFEBUY	SSOP	DB	28	50	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	0 to 70	TRS211C	

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
