

SMT Power Inductors

Unshielded Drum Core - PF0382NL Series

- Height:** 11.3mm Max
- Footprint:** 13.0mm x 9.4mm Max
- Current Rating:** up to 4.9A
- Inductance Range:** 10H to 1000H
- RoHS compliant version available on request

Electrical Specifications @ 25°C - Operating Temperature -40°C to +125°C⁷

Notes:

- Inductance at Irated is a typical inductance value measured when the inductor is subjected to the rated current.
- The rated current as listed is either the saturation current at 25°C or the heating current, depending on which value is lower.
- The saturation current I_{sat} is the current which causes the inductance to drop by 10% (typical) at an ambient temperature of 25°C. This current is determined by placing the component in the specified ambient environment and applying a short duration pulse current (to eliminate self-heating effects) to the component.
- The heating current IDC is the DC current, which causes the temperature rise of the part to increase by the approximately 40°C. This current is determined by mounting the component on a typical application PCB and applying the current to the device for 30 minutes.
- Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. PF0382.103NL becomes PF0382.103NLT). Pulse complies to industry standard tape and reel specification EIA481.
- The "NL" suffix indicates an RoHS-compliant part number. Non-NL suffixed parts are not necessarily RoHS compliant, but are electrically and mechanically equivalent to NL versions. If a part number does not have the "NL" suffix, but an RoHS compliant version is required, please contact Pulse for availability.
- The temperature of the component (ambient plus temperature rise) must be within the stated operating temperature range.
