Description

ATOM QR-CODE is an **M5Atom** compatible module for reading **Barcode/QR-codes**. The product includes two parts: an M5Atom Lite unit and code scanning module. It supports **6 kinds of 2D codes and 19 kinds of 1D codes**. It has built-in **lighting LED**, which can easily identify codes even in a dark environment. The green LED is convenient for focusing and aiming. The effective recognition accuracy of **high-resolution CMOS imaging reaches 5mil**. In addition, it has a variety of reading modes, which can be adjusted to **automatic continuous trigger or manual trigger as required**. The module has its own **buzzer**, which has different prompt sound effects in different states. The module also supports adding **custom prefix/suffix to the data, defining multi-national keyboard, data editing and many other functions**, it uses **TTL-232 for communication**, and can easily use serial port for data transmission. It can be easily used in **Arduino or UIFlow programming**. You can send the scanned data to the receiver for processing via wired or wireless connection through M5Atom Lite.
