

Micropower quad CMOS voltage comparators

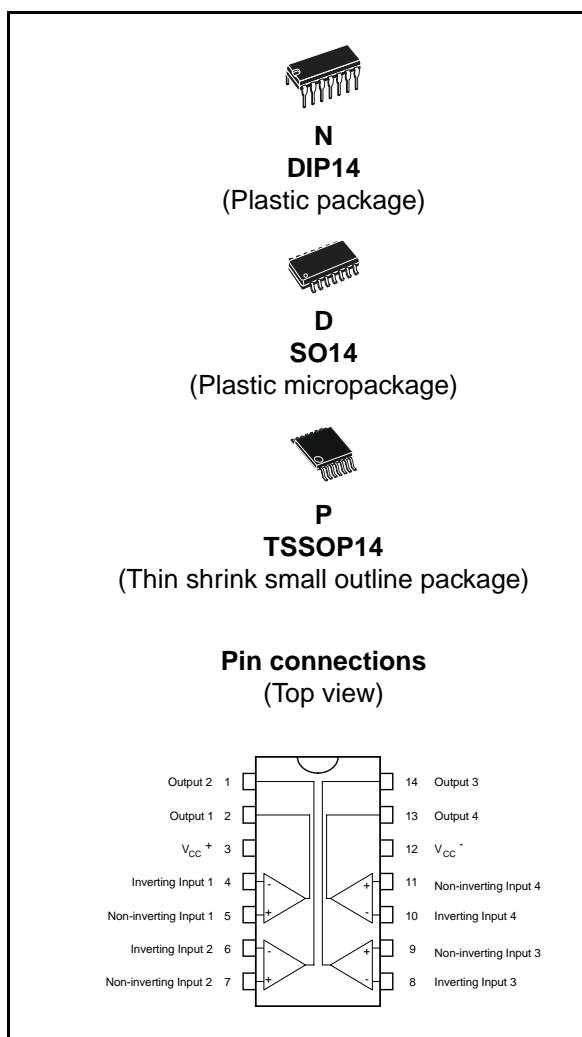

Features

- Push-pull CMOS output (no external pull-up resistor required)
- Extremely low supply current: 9µA typ per comparator
- Wide single supply range 2.7V to 16V or dual supplies (±1.35V to ±8V)
- Extremely low input bias current: 1pA typ
- Extremely low input offset current: 1pA typ
- Input common-mode voltage range includes GND
- High input impedance: $10^{12}\Omega$ typ
- Last response time: 2µs typ. for 5mV overdrive
- Pin-to-pin and functionally compatible with bipolar LM339

Description

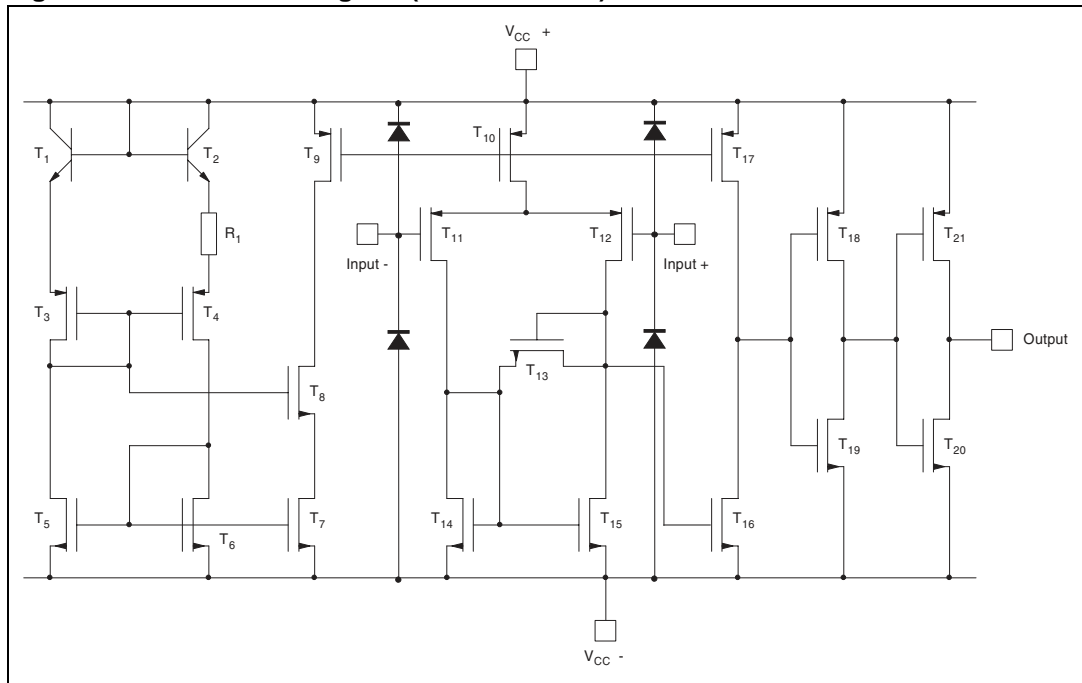

The TS3704 is a micropower CMOS quad voltage comparator with extremely low consumption of 9µA typ / comparator (20 times less than bipolar LM339). The push-pull CMOS output stage allows power and space saving by eliminating the external pull-up resistor required by usual open-collector output comparators.

Thus response times remain similar to the LM339.

| TSSOP14 | 710 | | |
| T_{stg} | Storage temperature range | -65 to +150 | °C |
| ESD | HBM: human body model ⁽⁶⁾ | 500 | V |
| | MM: machine model ⁽⁷⁾ | 50 | V |
| | CDM: charged device model ⁽⁸⁾ | 1.5 | kV |

- All voltage values, except differential voltage, are with respect to network ground terminal.
- Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.
- The magnitude of the input and the output voltages must never exceed the magnitude of the positive and negative supply voltages.
- Guaranteed by design.
- P_d is calculated with $T_{amb} = +25^\circ\text{C}$, $T_j = +150^\circ\text{C}$ and
 $R_{thja} = 80^\circ\text{C/W}$ for DIP14 package
 $R_{thja} = 150^\circ\text{C/W}$ for SO14 package
 $R_{thja} = 175^\circ\text{C/W}$ for TSSOP14 package
- Human body model: A 100pF capacitor is charged to the specified voltage, then discharged through a 1.5k Ω resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.
- Machine model: A 200pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω). This is done for all couples of connected pin combinations while the other pins are floating.
- Charged device model: all pins and the package are charged together to the specified voltage and then discharged directly to the ground through only one pin. This is done for all pins.

2. Maximum values include unavoidable inaccuracies of the industrial tests.

4 Package information

In order to meet environmental requirements, STMicroelectronics offers these devices in ECOPACK[®] packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an STMicroelectronics trademark. ECOPACK specifications are available at: www.st.com.
