**KENESAS** 

# **General Description**

The DA14531 SmartBond TINY<sup>™</sup> Module is the first Dialog Semiconductor Bluetooth<sup>®</sup> Low Energy module based on world's lowest power DA14531 SoC.

The module offers a unique combination of the lowest power and the integration of all external components including antenna at a very affordable price.

The module is designed to enable the use of Bluetooth<sup>®</sup> Low Energy in applications where Bluetooth<sup>®</sup> Low Energy could not be used until now because of cost or complexity. The bigger picture is to drive Bluetooth<sup>®</sup> Low Energy technology into every application, turning every product into a connected IoT node to drive the next 1 billion IoT devices in the market.

The SmartBond TINY<sup>™</sup> Module is supported by software that is easy to work with. This lowers the threshold to use Bluetooth<sup>®</sup> Low Energy technology and significantly speeds up the design time. The module comes with a configurable DSPS (serial port service) and next generation Codeless software to design Bluetooth<sup>®</sup> applications without Bluetooth<sup>®</sup> knowledge or advanced programming skills.

The combination of an affordable price, the lowest power consumption and ease of use makes the DA14531 TINY<sup>TM</sup> Module an ideal product for the mass market, including the makers community.

# **Key Features**

- Bluetooth<sup>®</sup>
  - Compatible with Bluetooth<sup>®</sup> v5.1, ETSI EN 300 328 and EN 300 440 Class 2 (Europe), FCC CFR47 Part 15 (US) and ARIB STD-T66 (Japan) core
  - Supports up to three connections
  - Renesas registered BD address preprogrammed in OTP
- Processing and memories
  - □ 16 MHz 32-bit Arm<sup>®</sup> Cortex<sup>®</sup> M0+ with SWD interface
  - 128 Kbytes internal FLASH
  - □ 48 Kbytes RAM
  - □ 144 Kbytes ROM
  - □ 32 Kbytes OTP
- Current Consumption
  - □ 2 mA RX at VBAT = 3 V
  - $\Box$  4 mA TX at VBAT = 3 V and 0 dBm
  - □ 1.8 µA at sleep with all RAM retained
- Radio
  - Programmable RF transmit power from -19 to +2.2 dBm
  - -93 dBm receiver sensitivity
- Interfaces
  - Quadrature decoder with 3 channels
  - □ 3 channel 11-bit ENOB ADC
  - □ 2 general purpose timers with PWM
  - □ 9 GPIOs
  - □ SPI
  - □ 2x UART, 1-wire UART support

□ I2C

- Power Management
  - □ Operating range (1.8 V 3.6 V)
  - □ Inrush current control
- Other
  - Real Time Clock
  - Trimmed 32 MHz Crystal
- Packaging
  - □ 12.5 mm x 14.5 mm x 2.8 mm package
- Module Software Development Kit
  - Configurable DSPS
  - □ Codeless v2.0
  - SDK6 support
- Module Software Tools
  - □ Flash/OTP programmer
  - □ SUOTA support
  - □ Battery Life Estimation
  - Data Rate Monitoring
  - □ Real-Time Power Profiling
  - Production Line Testing
- Standards Conformance
  - □ BT SIG QDID 113959
  - □ Europe (CE/RED) and US (FCC)
  - Canada and Japan
  - South Korea and Taiwan
  - □ South Africa and Brazil
  - □ China and Thailand
  - India

## SmartBond TINY Bluetooth® LE Module

# **Applications**

- Beacons
- Remote Controls
- Proximity tags
- Low Power Sensors
- Commissioning/Provisioning
- RF pipe
- Toys
- Industrial applications
- Data acquisition
- Wellness
- Infotainment
- IoT
- Robotics
- Gaming

RENESAS

# 2 Block Diagram

The SmartBond TINY<sup>™</sup> Module is based on the Dialog Semiconductor DA14531 SoC configured in buck mode. With an integrated 1 Mbit flash, 32 MHz XTAL and a printed antenna, the module enables a faster time to market at reduced development costs.

The module, as seen in Figure 1, is comprised of:

- 1 Mbit SPI FLASH
- 32 MHz XTAL
- 2 decoupling capacitors
- A power inductor
- A CLC filter and matching components for the printed antenna

#### SmartBond TINY Bluetooth® LE Module

**Final** 

**Note 1** There are two types of pads, namely Type A and Type B. Type A is a normal IO pad with a Schmitt trigger on input while Type B has an extra RC Filter with a cutoff frequency of 100 kHz.

**Note 2** This pin is also used for the communication to the internal SPI FLASH.

- I-PD is Input-Pulled Down
- I-PU is Input-Pulled Up
- DIO is Digital Input-Output
- PWR is power
- GND is Ground

**KENESAS** 

# 4 Characteristics

All MIN/MAX specification limits are guaranteed by design, production testing, and/or statistical characterization. Typical values are based on characterization results at default measurement conditions and are informative only.

Default measurement conditions (unless otherwise specified): VBAT= 3.0 V, TA = 25 °C. All radio measurements are done with standard RF measurement equipment.

## 4.1 Absolute Maximum Ratings

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, so functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specification are not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

#### Table 2: Absolute Maximum Ratings

| Parameter | Description                     | Conditions | Min  | Max | Unit |
|-----------|---------------------------------|------------|------|-----|------|
| VBAT_LIM  | Limiting battery supply voltage |            | -0.1 | 3.6 | V    |

## 4.2 Recommended Operating Conditions

| Parameter        | Description   | Conditions | Min  | Тур | Max | Unit |
|------------------|---|------------|------|-----|-----|------|
| V <sub>BAT</sub> | Battery supply voltage<br>enabling FLASH<br>programming |            | 1.65 |     | 3.6 | V    |
| VPIN             | Voltage on a pin  |            | -0.1 |     | 3.6 | V    |
| T <sub>A</sub>   | Ambient operating temperature                           |            | -40  | 25  | 85  | °C   |

## 4.3 **Device Characteristics**

## 6.2 Labeling

Figure 7: Reel Labeling

# 7 Application Information

There are some special considerations for the use of the TINY<sup>™</sup> module, namely:

- The RST signal is shared with the MOSI input of the NOR flash. For this reason, RST must not be driven to GND. When the internal Flash is in use, the reset functionality is not available
- The SPI Bus of DA14531 is used for the communication of the SoC with the NOR Flash at boot time. Three of the four signals are not driven to external module pins. For this reason, a sensor that utilizes the SPI bus must be assigned (by software) to the module pins to communicate with after the boot is completed and when NOR Flash is no longer in use. An example is given in Figure 11

## Figure 11: Example of Connecting a Sensor to the SPI Bus and an MCU to RST and UART

Note that the P0\_0/RST pin (J12) should not be driven while the TINY<sup>™</sup> module boots from its internal SPI FLASH.

**KENESA** 

# 8 Design Guidelines

The DA14531 SmartBond TINY<sup>™</sup> Module comes with an integrated PCB trace antenna. The antenna area is 12x4 mm. The antenna's Voltage Standing Wave Ratio (VSWR) and efficiency depend on the installation location.

The radiation performance of the PCB trace antenna depends on the host PCB layout. The maximum antenna gain is -0.5 dBi when installed on a 50x50 mm reference board, as shown in Figure 19. The radiation pattern is omnidirectional. The RF front end is optimized to achieve the maximum possible efficiency for various installation positions of the module on a host PCB. To obtain a similar performance, follow the guidelines described in the following sections.

## 8.1 Installation Location

For optimum performance, install the module at the edge of a host PCB with the antenna edge facing out. The module can be located on either of the outer corners or the middle of the host PCB with equivalent performance.

The antenna should have 4 mm free space in all directions. Copper or laminate in the proximity of the PCB trace antenna will affect the efficiency of the antenna. Laminate or copper under the antenna should be avoided as it severely affects the performance of the antenna. The antenna keep-out area can be seen in Figure 9.

Metals close to the antenna will degrade the antenna's performance. The amount of degradation depends on the host system's characteristics.

Table 10 summarizes the antenna efficiency at different installation locations on a host PCB as shown in Figure 8.

|       | Position | n # 1 (Left) | Position # | ‡ 2 (Middle) | Positio | n # 3 (Right) |
|-------|----------|--------------|------------|--------------|---------|---------------|
| Freq  | Antenna  | efficiency   | Antenna    | efficiency   | Antenn  | a efficiency  |
| [MHz] | [%]      | [dB]         | [%]        | [dB]         | [%]     | [dB]          |
| 2405  | 52       | -2,8         | 40         | -4,0         | 40      | -4,0          |
| 2440  | 46       | -3,4         | 34         | -4,7         | 41      | -3,9          |
| 2480  | 50       | -3,0         | 40         | -4,0         | 52      | -2,8          |

RENESAS

## SmartBond TINY Bluetooth® LE Module

RENESAS

# 9 Soldering

The successful reflow soldering of the DA14531 TINY<sup>™</sup> Module on a PCB depends on several parameters such as the thickness of the stencil, the pads solder paste aperture, the solder paste characteristics, the reflow soldering profile, size of the PCB, and so on.

The volume of solder paste applied to the board is mainly determined by the aperture size and stencil thickness. An initial solder paste aperture for the pads is provided on the solder paste layer of the PCB footprint. This aperture is modified by the assembly process experts according to stencil thickness, solder paste, and available assembly equipment.

The solder profile depends on the solder paste type used. For example, the soldering profile of a lead-free solder paste, Sn3Ag0.5Cu with no clean Flux (ROL0) and Solder Powder Type 4, is presented below.

No clean flux is recommended because washing must not be applied after assembly to avoid moisture being trapped under the shield.

| Statistic Name                               | Low Limit | High Limit | Units           |
|--|-----------|------------|-----------------|
| Slope1 (Target=2.0) Between 30.0 and 70.0    | 1         | 3          | Degrees/Second  |
| Slope2 (Target=2.0) Between 70.0 and 150.0   | 1         | 3          | Degrees/Second  |
| Slope3 (Target=-2.8) Between 220.0 and 150.0 | -5        | -0.5       | Degrees/Second  |
| Preheat time 110-190°C                       | 60        | 120        | Seconds         |
| Time above reflow @220°C                     | 30        | 65         | Seconds         |
| Peak temperature                             | 235       | 250        | Degrees Celsius |
| Total time above @235°C                      | 10        | 30         | Second          |

**\CENESAS** 

Solderability reflow check of five cycles was performed, applying the procedures mentioned in the JESD-A113E standard.

The MSL is an indicator for the maximum allowable time period (floor lifetime) in which a moisturesensitive plastic device, once removed from the dry bag, can be exposed to an environment with a maximum temperature of 30 °C and a maximum relative humidity of 60 % RH before the solder reflow process.

DA14531 TINY Module is qualified for MSL 3.

Table 12: MSL Level vs Floor Lifetime

| MSL Level | Floor Lifetime            |
|-----------|---------------------------|
| MSL 4     | 72 hours                  |
| MSL 3     | 168 hours                 |
| MSL 2A    | 4 weeks                   |
| MSL 2     | 1 year                    |
| MSL 1     | Unlimited at 30 °C/85 %RH |

## **10 Ordering Information**

The ordering number consists of the part number followed by a suffix that indicates the packing method. For details and availability, consult your Dialog Semiconductor local sales representative.

# **11 Regulatory Information**

This section outlines the regulatory information for the DA14531 TINY<sup>TM</sup> Module. The module is certified for the global market. This facilitates the user end-product market entry. Please note that the end-product would need to apply for the end-product certification, however, the module certification listed below will facilitate that procedure.

When the end user sends the end product to those markets, the end product may need to follow additional requirements according to the specific market regulation.

For example, some markets have additional testing and/or certification like Korea EMC, South Africa SABS EMC and some have the requirement to put on the end-product label a modular approval ID or mark that consists of an approved Bluetooth<sup>®</sup> Low Energy modular ID on the host label directly, like Japan, Taiwan, Brazil.

A list of the Conformance Standards that DA14531 TINY<sup>™</sup> Module meets is presented in Table 15.

## 11.1 CE (Radio Equipment Directive 2014/53/EU (RED)) - (Europe)

The DA14531 TINY<sup>™</sup> Module is a Radio Equipment Directive (RED) assessed radio that is CE marked. The module has been manufactured and tested with the intention of being a sub assembly to a final product. The module has been tested to RED 2014/53/EU Essential Requirements for Health, Safety and Radio. The applicable standards are:

- Radio: EN 300 328 V2.2.2 (2019-07)
- Health: (SAR) EN 62479:2010
- Safety: EN 62368-1
- EMC: EN 301 489-1 v2.1.1, EN 301 489 v3.1.1

End-product will need to perform the radio EMC tests according to EN 301 489. The conducted tests can be inherited from the module test report. It is recommended to repeat the EN 300 328 radiated testing with the end-product assembly.

# 11.2 FCC - (U.S.A.)

#### FCC ID: Y82-DA14531MOD

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Warning: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

#### FCC RF Radiation Exposure Statement:

This device complies with FCC radiation exposure limits set forth for an uncontrolled environment and meets the FCC radio frequency (RF) Exposure Guidelines. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

#### OEM Responsibilities to comply with FCC Regulations:

OEM integrator is responsible for testing their end-product for any additional compliance requirements needed for the module installation like EMC testing according to FCC Part 15B.

#### **Class B Device Notice**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

#### End-product labelling

The DA14531 TINY<sup>™</sup> Module is labelled with its own FCC ID: **Y82-DA14531MOD.** If the FCC ID is not visible when the module is installed inside another device, then the outside of the end-product into which the module is installed must also display a label referring to the enclosed module. This exterior label can use the following or similar wording:

#### "Contains FCC ID: Y82-DA14531MOD"

## 11.3 IC (CANADA)

#### IC ID: 9576A-DA14531MOD

The DA14531 TINY<sup>TM</sup> Module is certified for the IC as a single-modular transmitter. The module meets IC modular approval and labelling requirements. The IC follows the same testing and rules as the FCC regarding certified modules in authorized equipment.

The module has been tested according to following standards:

- Radio: RSS-247 Issue 2: February 2017, RSS-Gen Issue 4: November 2014
- Health: RSS-102 Issue 5:2015

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire

#### SmartBond TINY Bluetooth® LE Module

de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

#### **RF Exposure Statement**

This device complies with IC radiation exposure limits set forth for an uncontrolled environment and meets RSS-102 of the IC radio frequency (RF) Exposure rules. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Le présent appareil est conforme à l'exposition aux radiations IC définies pour un environnement non contrôlé et répond aux RSS-102 de la fréquence radio (RF) IC règles d'exposition. L'émetteur ne doit pas être colocalisé ni fonctionner conjointement avec à autre antenne ou autre émetteur.

#### **OEM Responsibilities to comply with IC Regulations:**

OEM integrator is responsible for testing their end-product for any additional compliance requirements needed for the module installation like IC ES003 (EMC). This can be combined with the FCC Part 15B test.

#### **End-product labelling**

The DA14531 TINY<sup>TM</sup> Module is labelled with its own IC ID: **9576A-DA14531MOD.** If the IC ID is not visible when the module is installed inside another device, then the outside of the end-product into which the module is installed must also display a label referring to the enclosed module. This exterior label can use the following or similar wording: **"Contains IC ID: 9576A-DA14531MOD"** 

## 11.4 NCC (Taiwan)

DA14531MOD-00F0100

CCAG20LP0160T6

The DA14531 TINY<sup>TM</sup> Module has received compliance approval in accordance with the Telecommunications Act. The module has been tested according to following standard:

• Radio: Low Power Radio Frequency Devices Technical Regulations (LP0002)

End-product may need to follow additional requirement according to regulation EMC.

注意!

依據 低功率電波輻射性電機管理辦法

第十一條

經型式認證合格之低功率射頻電機,非經許可,公司、商號或使用者 均不得擅自變更頻率、加大功率或變更原設計之特性及功能。

第十四條

低功率射頻電機之使用不得影響飛航安全及干擾合法通信;經發現有 干擾現象時,應立即停用,並改善至無干擾時方得繼續使用。 前項合法通信,指依電信法規定作業之無線電通信。

低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電 機設備之干擾。

#### End-product labelling

The NCC ID can be applied directly on end-product's label.

| _ |    |   |          |    |   |   |  |
|---|----|---|----------|----|---|---|--|
| n | -  | - | <u> </u> | h. | ~ | - |  |

ENESAS

## 11.5 MSIP (South Korea)

DA14531 TINY<sup>™</sup> Module has received certification of conformity in accordance with Radio Waves Act. The module has been tested according to following standard:

• Radio: Ministry of Science and ICT Notice No. 2019-105

For end-product wireless test, you can refer to Dialog's own certification report so that the lab knows the module itself has passed although it still needs to be tested. Additionally EMC for wireless (KN301489).

#### End-product labelling

The MSIP ID can be applied directly on end-product's label. The ID should be clearly visible on the final end-product. The integrator of the module should refer to the labeling requirements for Korea available on the Korea Communications Commission (KCC) website.

## 11.6 Australia/New Zealand (RCM)

DA14531 TINY<sup>™</sup> Module has not been certified for the Australian/ New Zealand market. However, the module's CE test reports can be used in part to demonstrate compliance in accordance with Short Range Devices- SRD Standards. The integrator of the module must construct a compliance folder with all relevant test reports: RF, EMC, Electrical Safety and DoC (Declaration of Conformity).

## 11.7 South Africa (ICASA)

South Africa certification is based on RED(CE) approval.

Approval is granted to print labels for the products as described below:

- 1. For use as Label on the product size: 80 mm (W) X 40 mm (H). To be printed on the product.
- 2. For use as Label on the package size: 80 mm (Ŵ) X 40 mm (Ĥ). To be printed on the package

End-product may need to follow additional requirement according to regulation EMC.

## 11.8 Brazil (Anatel)

The module has been tested and found to be compliant according to following Category II standards:

• ATO (Act) No 14448/2017

#### SmartBond TINY Bluetooth® LE Module

**KENESAS** 

End-product may need to follow additional requirement according to regulation EMC.

"Este equipamento não tem direito à proteção contra interferência prejudicial e não pode causar interferência em sistemas devidamente autorizados.

#### Translation on the text:

"This equipment is not entitled to protection against harmful interference and must not cause interference in duly authorized systems."

## 11.9 China (SRRC)

#### Model no. DA14531MOD-00F0100

#### CMIIT ID:2020DP5042

The module has been tested and found to be compliant according to following standards

• 信部无【2002】353号

End-product may need to follow additional requirement according to regulation EMC.

## 11.10 MIC (JAPAN)

R 018-200152

The DA14531 TINY<sup>™</sup> Module has received type certification as required to conform to the technical standards regulated by the Ministry of Internal Affairs and Communications (MIC) of Japan pursuant to the Radio Act of Japan.

The module has been tested according to the following standard:

 Radio: JRL "Article 49-20 and the relevant articles of the Ordinance Regulating Radio" Equipment

End-product may need to follow additional requirement according to regulation EMC. **End-product labelling** 

The MIC ID can be applied directly on end-product's label. The end-product may bear the GITEKI mark and certification number so that is clear that the end-product contains a certified radio module. The following note may be show next to, below, above the GITEKI mark and certification number in order to indicate the presence of a certified radio module:

#### 当該機器には電波法に基づく、技術基準適合証明等を受けた特定無線設備を装着している。

Translation on the text:

"This equipment contains specified radio equipment that has been certified to the Technical Regulation Conformity Certification under the Radio Law."

## 11.11 Thailand (NBTC)

#### Model no. DA14531MOD-00F0100 NBTC SDoC ID: RT 1768

DA14531 TINY<sup>™</sup> Module is compliant with NBTC requirements in Thailand.

End-product may need to follow additional requirement according to regulation EMC.

#### End-product labelling

End-products will have their own ID and labelling requirements.

**Datasheet** 

**Revision 3.3** 

26-Sep-2022

**Final** 

## SmartBond TINY Bluetooth® LE Module

11.12 India (WPC)

Model no. DA14531MOD-00F0100 Registration No: ETA-SD-20210402433

India certification is based on RED(CE) approval/ reports. There are no marking/ labeling requirements.

End-product may need to follow additional requirement according to regulation EMC.

Final

# **12 Environmental Information**

Dialog Semiconductor's suppliers certify that its products are in compliance with the requirements of REACH and Directive 2015/863/EU of the European Parliament on the restriction of the use of certain hazardous substances in electrical and electronic equipment. RoHS certificates from Dialog's suppliers are available on request.

# 13 Bluetooth<sup>®</sup> SIG Qualification

The DA14531 TINY<sup>™</sup> Module is listed on the Bluetooth<sup>®</sup> SIG Website as a qualified product. The customers can refer to the following QDIDs to qualify their product:

- QDID 113957 for Host Subsystem
- QDID 113959 for Controller Subsystem
- QDID 138960 for Profile Subsystem
