

### FEATURES

#### Electrical

- Efficiency up to 92.5% @72Vin, 15Vout
- 4242Vdc reinforced isolation
- Input transient voltage: 14.4V/1S, 200V/1S
- Operating Baseplate Temperature Range: -40°C to +100°C
- Fully protected: Input UVLO, Output OVP & OCP and OTP
- Monotonic startup and pre-biased startup
- No minimum load requirement
- Meet EN50155 with external components
- Working altitude up to 5000 m

#### Mechanical

- Size: 63.1mm\*60.6mm\*13mm

#### Safety & Reliability

- IEC/EN/UL/CSA 62368-1
- IEC/EN/UL/CSA 60950-1
- Fire & Smoke meet EN45545-2
- Shock & Vibration meet EN50155(EN61373)
- ISO 9001, TL 9000, ISO 14001, QS 9000,
- OHSAS18001 certified manufacturing facility

Input voltage: 16.8~137.5V continuous  
 14.4~200V transient  
 Single output: 12V, 15V, 24V, 48V, 54V  
 Output power: 100W

### Recommended Part Number

Model Name	rated Input	Output	Eff. @ 100% Load	Others
H80SV12008PRFS	16.8~137.5 continuous 14.4~200V transient	12V 8.5A	89.0% @72V	Positive on/off Threaded mounting hole
H80SV15007PRFS		15V 7.0A	92.5% @72V

### Notes

\*1 Maximum output power & current of the module should not over rated output power & current.

\*2 Ripple & Noise measurement bandwidth is 0-20MHz, Vin=72V, full load, Cout=10uF tan (24V/48V/54V output need use polymer)+1uF ceramic

\*3 **"Delay from input"**: from Vin reaching turn-on threshold to 10% V<sub>out</sub> (pre-applied enable); **"Delay from on/off"**: From enable to 10% V<sub>out</sub> (pre-applied V<sub>in</sub>); **"Rise time"** From 10% to 90% V<sub>out</sub>.

\*4 Load transient test condition: 72Vin, 50% to 75% full load, 10uF Tan (24V/48V/54V output need use polymer) & 1uF ceramic load cap, 0.1A/us.

## Pin Definition

PIN	NAME	DESCRIPTION
1	Vin+	the positive input pin
2	UVLO	by pulled up/down through resistor, this pin allows to tune the UVLO level
3	PULSE OUT	output 1kHz/50% pulse voltage, easy to realize inrush limited circuit
4	ON/OFF	Remote on/off pin
5	BUS	200uF cap and 3ohm Resistor connected between BUS and VIN- is necessary to keep operating stable, and also realize 0~30ms hold up time with a optional RCD circuit
6	VIN-	the negative input pin
7	VOUT+	the positive output
8	SENSE+	the positive sense pin
9	TRIM	by pulled up/down through resistor, this pin allow to tune output voltage up/down.
10	SENSE-	the negative sense pin
11	VOUT-	the negative output

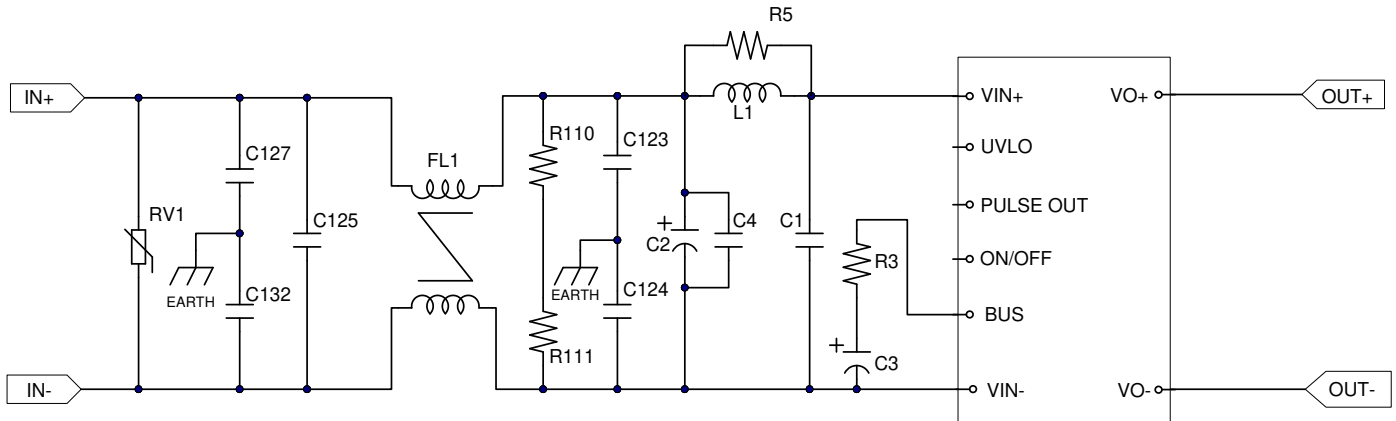

## Recommended Layout

## Feature Description

### Over-Current Protection

The modules include both internal output over-current limit circuit, and over-current protection. The OCP level is higher than OCL level.

When load current exceed OCL level, the modules will decrease output voltage to limit load current. Once output voltage lower than 60% output set point, module will shut down and enter hiccup mode.

When load current rise fast and exceeds OCP level, the module will shut down quickly and enter hiccup mode, until the fault condition is removed. For H80SV48002 production, if output resistance is very low, the output current could be very high and cause damage. The module will be effectively protected only if load resistance higher than 2ohm.

### Over-Voltage Protection

The modules include an internal output over-voltage protection circuit, which monitors the voltage on the output terminals. If this voltage exceeds the over-voltage set point, the module will shut down, and always try to restart until the over current condition is corrected

### Over-Temperature Protection

The over-temperature protection consists of circuitry that provides protection from thermal damage. If the over-temperature is detected the module will shut down, and restart after the temperature is within specification.

### UVLO (pin2)

Pin2 is for adjust turn on/off threshold voltage between Vin+ and Vin-, the default setting (leave the UVLO pin floating) is 16V on and 14V off. It also can be configured by a resistor connected between the UVLO and VIN (+/-) pin. The following table and figure show a typical configuration.

Figure 31 UVLO pin Implementation

Nominal Vin	24V		36V	48V	72V	96V	110V
Turn-off Threshold	12 ±0.4V	14 ±0.4V	21.2 ±0.4V	28.4 ±0.4V	42.8 ±1V	57.2 ±1V	65.6 ±2V
Turn-on Threshold	14 ±0.4V	16 ±0.4V	24.5 ±0.4V	33.6 ±0.4V	50.4 ±1V	67.6 ±1V	76.8 ±2V
External Resistor (KΩ)*	2.2Meg	open	24.9	12.4	6.19	4.12	3.48
Location	R1 (leave R2=NC)		R2 (leave R1=NC)				

### PULSE OUT(Pin3)

This pin outputs a 1KHz 50% duty cycle pulse voltage with 12V amplitude. It is designed to provide a bootstrap signal for the input inrush current limit circuit (as show in following figure), and also could indicate operating status with a LED connected. If this feature is not used, please left it open.

Figure 32 An Active Circuit Design for Inrush Current Limit

When pulse out pin is high level, the source current of pulse out pin should be limited no more than 10mA. For resistive load, higher than 1.2kohm is necessary.

### Remote On/off(Pin4)

The remote On/Off feature on the module can be either negative or positive logic depend on the part number options on the first page.

**For Negative logic version**, turns the module on during an external logic low and off during a logic high. If the remote on/off feature is not used, please short the On/Off pin to Vin(-).

**For Positive logic version**, turns the modules on during an external logic high and off during a logic low. If the remote On/Off feature is not used, please leave the On/Off pin to floating.

Remote On/Off can be controlled by an external switch between the On/Off terminal and the Vin(-) terminal. The switch can be an open collector or open drain, as showed in figure9

Figure 33 Remote On/Off Implementation

### Trim(PIN9)

To increase or decrease the output voltage set point, connect an external resistor between the TRIM pin and SENSE (+) pin or SENSE (-) pin. The TRIM pin should be left open if this feature is not used.

Take H80SV12017 as example, for trim down, the external resistor value required to obtain a percentage of output voltage change  $\Delta$  is defined as:

$$R_{trim-down} = \left[ \frac{5.11}{\Delta} - 10.22 \right] (K\Omega)$$

Ex. When Trim-down -10% (12V×0.9=10.8V)

$$R_{trim-down} = \left[ \frac{5.11}{10\%} - 10.22 \right] (K\Omega) = 40.88(K\Omega)$$

For trim up, the external resistor value required to obtain a percentage output voltage change  $\Delta$  is defined as:

$$R_{trim-up} = \left[ \frac{45}{\Delta} + 40 \right] K\Omega$$

Ex. When Trim-up +10% (12V×110%=13.2V)

$$R_{trim-up} = \left[ \frac{45}{10\%} + 40 \right] = 490(K\Omega)$$

	Rtrim-up /kohm	Rtrim-down/kohm
H80SV12017	$\frac{45}{\Delta} + 40$	$\frac{5.11}{\Delta} - 10.22$
H80SV15013	$\frac{57.46}{\Delta} + 52.35$	$\frac{5.11}{\Delta} - 10.22$
H80SV24008	$\frac{95}{\Delta} + 90$	$\frac{5.11}{\Delta} - 10.22$
H80SV48004	$\frac{195}{\Delta} + 190$	$\frac{5.11}{\Delta} - 10.22$
H80SV54002	$\frac{220}{\Delta} + 215$	$\frac{5.11}{\Delta} - 10.22$
	Rtrim-up /kohm	Rtrim-down /kohm
H80SV12017	$\frac{45}{\Delta} + 40$	$\frac{5.11}{\Delta} - 10.22$
H80SV15013	$\frac{57.46}{\Delta} + 52.35$	$\frac{5.11}{\Delta} - 10.22$
H80SV24008	$\frac{95}{\Delta} + 90$	$\frac{5.11}{\Delta} - 10.22$
H80SV48004	$\frac{195}{\Delta} + 190$	$\frac{5.11}{\Delta} - 10.22$
H80SV54002	$\frac{220}{\Delta} + 215$	$\frac{5.11}{\Delta} - 10.22$

## Design Considerations

### Input Source Impedance

A C-L-C filter circuit (figure 34) comprises C2, L1, C1 is recommended placed at the input of H80SV module. C2 is a 100uF CAP and keep the input voltage stable. L1, C1,C3 depress the high frequency ripple current flow into C2. R5 helps to avoid LC resonant in burst mode operating when output load is low.

Location	description
C1,C3	1uF MLCC or film cap
C3	100uF cap
L1	3.3uH inductor
R5	3.01ohm/1w

Figure 34 input filter design

### Bus Cap and Resistor

An electrolytic cap (C3) about 200uF and a resistor (R3) 3ohm connected between bus and Vin- is necessary. The cap provides/absorb transient power and make the DCDC operating stable. The series resistor R3 is recommended to depress the high frequency ripple current flow into C3.

Figure 35 BUS pin circuit

The bus pin is a voltage source depends on input voltage, the relationship is showed in below table and also the recommended rate voltage of C3

Vin/V	24	48	72	96	110
Vbus/V	90	90	90	96	110
Vrate of C3	≥100V			≥160V	

The power loss on R3 should be taken into account

1. In steady operating status, R3 consumes 0.3w in steady operating.
2. During start-up transient, C3 is charged through R3,

which endures a pulse power loss about 20w/15ms. The test condition is as below:  
 $V_{IN}=137.5V$ ,  $C3=240\mu F$ ,  $R3=3\Omega$ , the  $V_{IN}$  rise slew rate= $10V/ms$ .

Based on the 2 points above, we recommend below parts for R3.

**WF25S3R0JTL**(WASIN), $3\Omega$ /J 2512, or  
**SG73P2BTTD6R04F**(KOA)  $6.04\Omega$ /F 1206 ,2pcs parallel connected

### The hold-up time circuit

Hold-up time circuit comprises R4, D1, C4, showed in figure 36. The capacity of C4 decides the hold-up time during interruption of input power. The relationship is showed in below table. The maximum hold-up time is 30ms, and is not able to be enlarged by adding more cap. The rated voltage of C4 is same with C3.

**Figure 36** hold-up time circuit

Model	Vin	24V	36V	48V	72V	96V	110V
		Capacitance					
12007	For 10 mS	900u			450u	300uF	
	For 30 mS	2200u			1350u	900uF	
15013	For 10 mS	1200u			500u	350u	
	For 30 mS	2800u			1500u	1000u	
24004	For 10 mS	900u			450u	300u	
	For 30 mS	2200u			1350u	900u	
48002	For 10 mS	1500u			600u	400u	
	For 30 mS	3600u			1800u	1200u	
54002	For 10 mS	1500u			600u	400u	
	For 30 mS	3600u			1800u	1200u	

During start up, R4 endures a high pulse power, and should be selected carefully. The power is related to  $V_{in}$  and C4. We recommend part number for R4 as below:

**WHS7-100RJT07** (TT Electronics)  $100\Omega$ .

### Safety Considerations

The power module must be installed in compliance with the spacing and separation requirements of the end-user's safety agency standard, i.e., IEC 62368-1: 2014 (2nd edition), EN 62368-1: 2014 (2nd edition), UL 62368-1, 2nd Edition, 2014-12-01 and CSA C22.2 No. 62368-1-14, 2nd Edition, 2014-12. IEC 60950-1: 2005, 2<sup>nd</sup> Edition + A1: 2009 + A2: 2013, EN 60950-1: 2006 + A11: 2009 + A1: 2010 + A12: 2011 + A2: 2013, UL 60950-1, 2<sup>nd</sup> Edition, 2011-10-14 and CSA C22.2 No. 60950-1-07, 2<sup>nd</sup> Edition, 2010-14, if the system in which the power module is to be used must meet safety agency requirements.

Reinforced insulation is provided between the input and output of the module. Input is considered as hazardous voltage secondary circuit which main transient is up to 1500Vpk and output is considered as SELV circuit at least basic insulation shall be provided between the hazardous voltage secondary circuit and AC mains/Primary circuit. The input terminals of the module are not considered as operator accessible.

A SELV reliability test may require when install on the system where the module is used, in combination with the module, to ensure that under a single fault, hazardous voltage does not appear at the module's output.

This power module is not internally fused. To achieve optimum safety and system protection, an input line fast-acting fuse with 20A is highly recommended. Further evaluation should be considered if other type and rated of fuse is used.

### Soldering and Cleaning Considerations

Post solder cleaning is usually the final board assembly process before the board or system undergoes electrical testing. Inadequate cleaning and/or drying may lower the reliability of a power module and severely affect the finished circuit board assembly test. Adequate cleaning and/or drying is especially important for un-encapsulated and/or open frame type power modules. For assistance on appropriate soldering and cleaning procedures, please contact Delta's technical support team

## Thermal Considerations

The thermal curve is based on the test setup shown as figure 37. The module is mounted on an Al plate and was cooled by cooling liquid.

Figure 38 shows the location to monitor the temperature of the module's baseplate. The baseplate temperature in thermal curve is a reference for customer to make thermal evaluation and make sure the module is operated under allowable temperature.
