

## SPH-90-F

Ruland SPH-90-F, 5 5/8" Heavy Duty Shaft Collar, Black Oxide Steel, Two-Piece Clamp Style, 7 1/2" OD, 1.375" Width

### Description

Ruland SPH-90-F is a two-piece heavy duty shaft collar with a 5.6250" bore, 7 1/2" OD, and 1.375" width. The clamp style design does not mar the shaft, is easy to remove, and is indefinitely adjustable. It is commonly used for guiding, spacing, stopping, mounting, and component alignment. Equipment manufacturers benefit from the tightly controlled face to bore perpendicularity (TIR of ? .002"). Perpendicularity is critical for alignment when the shaft collar is used as a load bearing face, mechanical stop, or for mounting components such as gears or bearings. Proprietary processes have been developed by Ruland to maintain superior fit, finish, and holding power. SPH-90-F is stamped with the Ruland name and bore size for ease of identification. This heavy duty shaft collars have larger ODs and screws for higher holding power. Halves are mated throughout the manufacturing process for proper fit and alignment. Forged screws test beyond ANSI standards to ensure maximum holding power. SPH-90-F is manufactured from solid bar stock sourced from select North American mills and machined to a fine burr free finish. Ruland uses 1215 lead-free steel with a proprietary black oxide finish that produces a fine glossy finish while increasing holding power and resisting corrosion. SPH-90-F is RoHS3 and REACH compliant and manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

### Installation Instructions

1. Use the SPH-90-F heavy duty shaft collar as it is received.
2. Wipe the bore clean.
3. Apply a thin coat of light oil to the shaft.
4. Place the collar onto the desired shaft location and tighten it using a 3/8 in hex wrench until a slight resistance is felt.
5. Be sure to maintain the gap of 0.188 in between the two halves of the collar during installation.
6. Wring collar into its final position and tighten the screw to the full recommended seating torque of 1612 lb-in using a 3/8 in torque wrench.
