

## 5V/8A, synchronous flyback converter, Power over Ethernet (PoE) IEEE 802.3bt compliant reference design

### Features

- **PM8805** 4-pair IEEE 802.3bt compliant PD interface
- Works with power supplied from Ethernet LAN cables or local auxiliary sources
- Line input voltage range: 40 to 60 V<sub>DC</sub>
- Output stage managed by configurable **PM8804** controller
- Output voltage: 5 V<sub>DC</sub> ±2.5%
- Output current: 8 A
- Peak-to-peak output ripple: <50 mV
- DC-DC full load efficiency: >91%
- Overall full load efficiency: >90%
- Transient response  $\Delta V$  pk-pk 100% to 50% load step  $\approx$  700 mV
- Switching frequency  $\approx$  280 KHz

### Description

The **STEVAL-POE002V1** reference design is a two-stage converter for a powered device (PD), and is able to deliver up to 40 W (5 V/8 A) DC from appropriate 4-pair PoE power sourcing equipment (PSE), or an external auxiliary supply.

The first stage is the Ethernet interface is based on the **PM8805** controller with integrated full active bridge rectification. The PoE controller is compliant with the third generation IEEE 802.3bt specification (as well as the preceding 802.3af/at standards), with improved features and increased power capacity that allow new application possibilities for PoE networks, including point of sales and retail logistics devices.

The second stage is the DC-DC converter designed around a fixed frequency flyback topology managed by the configurable **PM8804** PWM controller, with secondary synchronous rectification via a gate driver transformer.

Product summary	
PoE-PD converter based on PM8804 and PM8805	<b>STEVAL-POE002V1</b>
PWM peak current mode controller for PoE and telecom systems	<b>PM8804</b>
IEEE802.3bt PoE-PD interface with integrated dual-active bridge	<b>PM8805</b>
