

Medical AC-DC Open Frame Power Supply

200 W 2"x4" High Density / MDS-200APB□ AA

MDS-200APB□ AA

Highlights & Features

- Safety Approvals to IEC 60601-1 3.1rd ed. & IEC 62368-1
- Compliant with IEC 60601-1-2 4th Ed. Requirements
- Power Good Signal
- 2xMOPP Isolation for Medical Applications
- Up to 120 W~140 W convection, 200 W forced air

Safety Standards

CB Certified for worldwide use

Model Number:	MDS-200APB□ AA
Unit Weight:	200 g (0.441 lb)
Dimensions (L x W x H):	101.9 x 51.1 x 36.6 mm (4.01 x 2.01 x 1.44 inch)

General Description

Delta's MDS-200APB□ AA internal open frame power supply comes with universal AC input range from 90 Vac to 264 Vac. Other features include low leakage, Type BF Patient Access Leakage Currents, and electric shock protection compliance with 2 x MOPP requirements. The MDS-200APB□ AA is certified for EMC standards according to EN/BS EN 55011 for industrial, scientific and medical (ISM) radio-frequency equipment; and EN/BS EN 55032 for Industrial Technology Equipment (ITE) radio-frequency equipment.

The MDS-200APB□ AA comes with both medical and ITE safety approvals, such as UL/CE, and CB certification. Designs are compliant with RoHS Directive for environmental protection.

Model Information

Model Number	Input Voltage	Output Voltage	Convection Current Output	Forced Air Current Output
MDS-200APB12AA	90-264 Vac	12 Vdc	0-10.83 A	0-16.67 A**
MDS-200APB24AA		24 Vdc	0-5.83 A	0-8.33 A*
MDS-200APB36AA		36 Vdc	0-3.33 A	0-5.56 A*

*With 5.5 CFM forced air
**With 8.5 CFM forced air

Mechanical Drawing (3Pin input type)
MDS-200APB12 AA

MDS-200APB24 AA & MDS-200APB36 AA

Notes

- Dimensions are in mm
- CN1 mates with Molex housing 26-03-4030 and Molex series 6838 crimp terminals. Input Line can also be connected to Neutral, and Input Neutral can be connected to Line.
- CN101 mates with JST housing VHR-4N and JST terminal SVH-41T-P1.1.
- CN102 mates with Molex housing 0874390200 and Molex 874210000 crimp terminals.
- CN3: PINGOOD JP-13T or equivalent mate with KST FDFNYD1-187 or other applicable connectors
- Two mounting points in mechanical drawing need to be connected to system earth case together, Protective bonding conductor from the end product protective earth terminal (if any) can be tied to CN3 for open frame model.

Medical AC-DC Open Frame Power Supply

200 W 2"x4" High Density / MDS-200APB□ AA

Functions

Start-up Time

The time required for the output voltage to reach 90% of its set value, after the input voltage is applied.

Rise Time

The time required for the output voltage to change from 10% to 90% of its set value.

Hold-up Time

Hold up time is the time when the AC input collapses and output voltage retains regulation for a certain period of time. The time required for the output to reach 90% of its set value, after the input voltage is removed.

■ Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

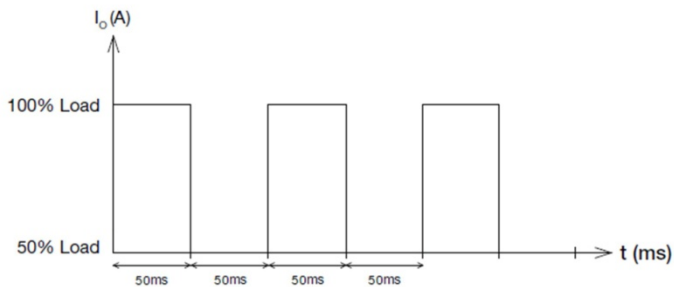

Medical AC-DC Open Frame Power Supply

200 W 2"x4" High Density / MDS-200APB□ AA

Dynamic Response

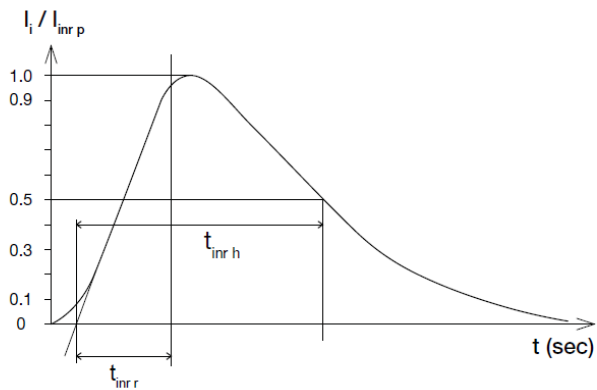

The power supply output voltage will remain within $\pm 5\%$ of its steady state value, when subjected to a dynamic load 50 to 100% of its rated current.

■ 50 to 100% Load

Inrush Current

Inrush current is the peak, instantaneous, input current measured and occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

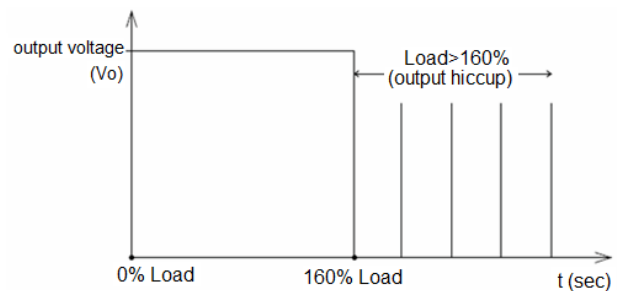

Overvoltage Protection

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 5 under "Protections". Power supply will latch off, and require removal/re-application of input AC voltage in order to restart.

Short Circuit Protection

The power supply's output OLP/OCP function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode", as shown in the illustration in the OLP/OCP section on this page. The power supply will return to normal operation after the short circuit is removed.

Overload & Overcurrent Protections

The power supply's Overload (OLP) and Overcurrent (OCP) Protections will be activated before output current under 160% of I_o (Max load). Upon such occurrence, V_o will start to drop. Once the power supply has reached its maximum power limit, the protection will be activated and the power supply will go into "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition causing the OLP and OCP is removed and I_o is back within the specified limit.

Additionally, if the lout is $< 160\%$ but $> 100\%$ for a prolong period of time (depending on the load), the Over Temperature Protection (OTP) will be activated due to high temperature on critical components. Then, the power supply will be latched off, and require recycling of input voltage to restart it.

Over Temperature Protection

As mentioned above, the power supply also has Over Temperature Protection (OTP). This is activated when the overload condition persists for an extended duration and the output current is below the overload trigger point but $> 100\%$ load. In the event of a higher operating temperature condition at 100% load, the power supply will run into OTP when the surrounding air temperature is higher than the operating temperature. When activated, the output voltage will go into latch mode until the input voltage is removed; then, reapplied, and the surrounding air temperature drops to its normal operating temperature.

Medical AC-DC Open Frame Power Supply

200 W 2"x4" High Density / MDS-200APB□ AA

Power Good

Power Good+ pin is an open collector transistor (40V/600 mA rating). A resistor (suggested value 20 Kohm, 1/8 W) can be added between output pin (or, other available pull-up voltage that is no greater than 30 V) and the Power Good+ pin (refer to figure below). Value of pull-up resistor may have to be adjusted, depending on voltage used, and other end-use conditions of the Power Good+ pin connection to the product. When AC input is on, Power Good+ pin will be high. When AC input is off, Power Good+ pin will be low. There will be a minimum of 5 milliseconds (with 120 W convection output power) between the time the power good goes to low level, and the time when the output reaches 90% of its rated value.

Certificate

Delta has been certified as meeting the requirement of ISO 13485: 2003 and EN ISO 13485:2012 for the design and manufacture of switching power supply and adaptor for medical device.

In addition to a UL Total Certification Program (TCP) approved client laboratory for IEC 62368-1, Delta also has participated UL Client Test Data Program (CDTP) for IEC 60601

Attention

Delta provides all information in the datasheets on an "AS IS" basis and does not offer any kind of warranty through the information for using the product. In the event of any discrepancy between the information in the catalog and datasheets, the datasheets shall prevail (please refer to www.DeltaPSU.com for the latest datasheets information). Delta shall have no liability of indemnification for any claim or action arising from any error for the provided information in the datasheets. Customer shall take its responsibility for evaluation of using the product before placing an order with Delta.

Delta reserves the right to make changes to the information described in the datasheets without notice.
