

## DS1666, DS1666S Audio Digital Resistor

### FEATURES

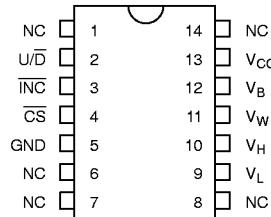

- 128 position, digitally controlled potentiometer
- Operates from a +5 volts power supply with TTL signal inputs
- Wide analog voltage range of  $\pm 5$  volts
- Resistive elements are temperature compensated to  $\pm 20$  percent end to end
- Low-power CMOS
- 14-pin DIP or 16-pin SOIC for surface mount applications
- Default position on power up sets wiper position at 10%
- Operating temperature range
  - $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ ; industrial

	Resolution/Step			
Resistance values	Low End	High End	$-3\text{dB}$ Point	
DS1666-10	10K $\Omega$	24 $\Omega$	152 $\Omega$	1.1 MHz
DS1666-50	50K $\Omega$	122 $\Omega$	759 $\Omega$	200 KHz
DS1666-100100K $\Omega$	243 $\Omega$	1.519K $\Omega$	100 KHz	

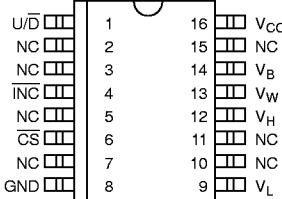

### DESCRIPTION

The DS1666 is a solid-state potentiometer which is set to value by digitally controlled resistive elements. The potentiometer is composed of 127 resistive sections. Between each resistive section and both ends of the potentiometer are TAP points accessible to the wiper. The position of the wiper on the resistance array is controlled by the  $\overline{\text{CS}}$ ,  $\overline{\text{U/D}}$  and  $\overline{\text{INC}}$  inputs. The position of the wiper defaults to the 10% position on power up. The resolution of the DS1666 is shown in Figure 1.

### PIN ASSIGNMENT

14-PIN DIP (300 MIL)  
See Mech. Drawings Section

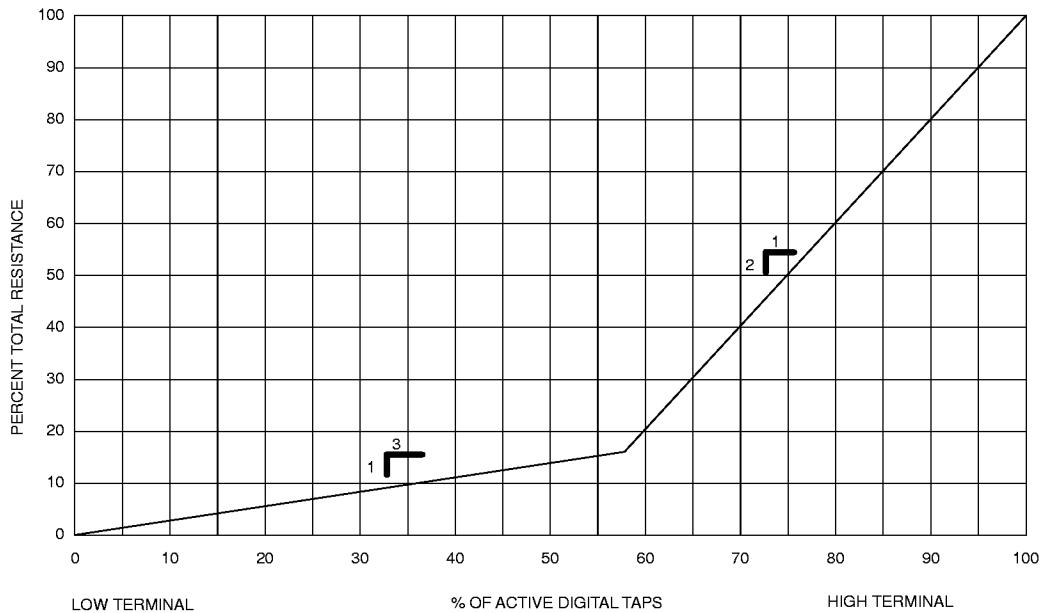

16-PIN SOIC (300 MIL)  
See Mech. Drawings Section

### PIN DESCRIPTION

V <sub>H</sub>	– High Terminal of Resistor
V <sub>L</sub>	– Low Terminal of Resistor
V <sub>W</sub>	– Wiper Terminal of Resistor
U/D	– Up/Down Control
$\overline{\text{INC}}$	– Wiper Movement Control
$\overline{\text{CS}}$	– Chip Select for Wiper Movement
NC	– No Connection
V <sub>CC</sub>	– +5 Volts
GND	– Ground
V <sub>B</sub>	– 0 to $-5$ Volts

The DS1666 Digital Audio Resistor is uniquely designed to provide a potentiometer that is logarithmic rather than linear across its entire range. The lower half of the potentiometer advances 1% of total resistance for each 3% of scale advanced, providing for precise amplification of low volume signals. The upper half of the potentiometer advances 2% of resistance for every 1% of scale advanced, providing for the lower resolution gain required for high volume amplification.

**GRAPH OF AUDIO TAPER** Figure 1

### OPERATION

The  $\overline{CS}$ , U/D and  $\overline{INC}$  inputs control the position of the wiper along the resistor array (Figure 1). When  $\overline{CS}$  is active (low), a high to low transition on the  $\overline{INC}$  will increment or decrement an internal counter depending on the level of the U/D pin. When the U/D pin is low, the counter will decrement. When the U/D pin is high, the counter will increment. The state of the U/D pin can be changed while  $\overline{CS}$  is active allowing for precise adjustment during calibration. The output of the counter is decoded to set the position of the wiper. When the  $\overline{CS}$  input transitions to the high (inactive) level, the value of the counter is stored and the wiper position is maintained until power ( $V_{CC}$ ) is lost. When power is restored, the DS1666 returns to the default setting and positions the wiper to 10 percent. The value of the end-to-end and end-to-wiper position is indeterminate while  $V_{CC}$  is not applied.

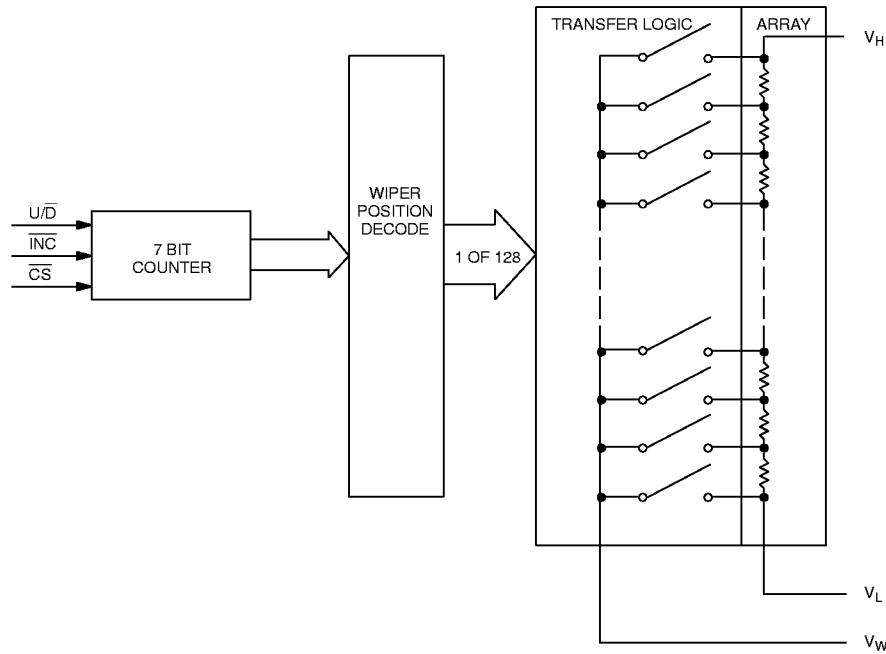

The DS1666 has a resistor array that resembles an audio taper potentiometer as shown in Figure 1. Since the taper is not linear, exact resistance values for each of the 128 positions of the resistor is not specified. However, the end-to-end resistance is specified to be within  $\pm 20$  percent of the stated resistor value over an industrial temperature range of  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ .

### ANALOG CHARACTERISTICS

End-to-End Resistance Tolerance =  $\pm 20$  percent  
 Typical Noise =  $< 120 \text{ dB/Hz}$  REF:IV  
 Temperature Coefficient =  $\pm 800 \text{ PPM}^{\circ}\text{C}$  typical  
 Resistance at tap #74=18%  $\pm 2\%$  of total resistance.

### PIN DESCRIPTIONS

$V_H$	The high end of the potentiometer. This terminal is capable of handling input voltages between $\pm 5$ volts.
$V_L$	The Low end of the potentiometer. This terminal is capable of handling input voltages between $\pm 5$ volts.
$V_W$	The wiper terminal of the potentiometer. The value of the wiper is controlled by the U/D and the $\overline{INC}$ pins.
Up/Down (U/D)	The U/D input controls the direction of the wiper movement when setting the potentiometer.
Increment ( $\overline{INC}$ )	Toggling $\overline{INC}$ will move the potentiometer wiper by either incrementing or decrementing the counter.
Chip Select ( $\overline{CS}$ )	The device is selected when $\overline{CS}$ input is low. The current counter value is stored when CS is returned high.

**ABSOLUTE MAXIMUM RATINGS\***

Voltage on CS, INC, U/D, and V <sub>CC</sub> Relative to Ground	-0.5V to +7.0V
Voltage on V <sub>H</sub> , V <sub>L</sub> , and V <sub>W</sub> Relative to Ground	-6.5V to +6.5V
Voltage on V <sub>B</sub>	-6.5V to Ground
Operating Temperature	-40°C to +85°C
Storage Temperature	-55°C to +125°C
Soldering Temperature	260°C for 10 seconds

\* This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

**RECOMMENDED DC OPERATING CONDITIONS**

(-40°C to +85°C)

PARAMETER	SYMBOL	MIN	TYP	MAX	UNITS	NOTES
Supply Voltage	V <sub>CC</sub>	+4.5	5.0	5.5	V	1

**DATA SHEET REVISION SUMMARY**

The following represent the key differences between 07/26/93 and 06/18/97 version of the DS1666 data sheet.  
Please review this summary carefully.

1. Remove commercial temp grade reference
2. Add order info table
