

AD7506/AD7507

FEATURES

- R_{ON}: 300Ω**
- Power Dissipation: 1.5mW**
- TTL/DTL/CMOS Direct Interface**
- Break-Before-Make Switching**
- Standard 28-Pin DIPs and 28-Terminal Surface Mount Packages**

GENERAL DESCRIPTION

The AD7506 is a monolithic CMOS 16-channel analog multiplexer packaged in a 28-pin DIP or a 28-terminal surface mount package. It switches a common output to one of 16 inputs, depending on the state of four address lines and an "enable." The AD7507 is identical to the AD7506 except it has two outputs switched to two of 16 inputs depending on three binary address states and an "enable."

ABSOLUTE MAXIMUM RATINGS*

- (T_A = +25°C unless otherwise noted)
- V_{DD} - GND +17V
 - V_{SS} - GND -17V
 - V Between Any Switch Terminals (see Note 1) 25V
 - Digital Input Voltage Range V_{DD} to GND
 - Overvoltage at V_{OUT} (V_S) V_{SS}, V_{DD}
 - Overcurrent (I_S, Continuous One Channel) 20mA
 - Switch Current (I_S, Surge One Channel) 35mA
 - 1ms Duration, 10% Duty Cycle 35mA
 - Power Dissipation (Any Package)
 - Up to +50°C 1000mW
 - Derates above +50°C by 10mW/°C
 - Operating Temperature
 - Commercial (KN Versions) 0 to +70°C
 - Industrial (KQ Versions) -25°C to +85°C
 - Extended (TQ, TE Versions) -55°C to +125°C
 - Storage Temperature -65°C to +150°C
 - Lead Temperature (Soldering, 10sec) +300°C

CAUTION:

- ¹Do not apply voltage higher than V_{DD} and V_{SS} to any other terminal, especially when V_{SS} = V_{DD} = 0V all other pins should be at 0V.
- ²The digital control inputs are diode protected; however, permanent damage may occur on unconnected units under high energy electrostatic fields. Keep unused units in conductive foam at all times.
- *Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Only one Absolute Maximum Rating may be applied at any one time.

REV. A

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of Analog Devices.

		ON	0.05mA typ, 1mA max			

NOTES

¹KN Version specified for 0 to +70°C; KQ Version for -25°C to +85°C; and TQ, TE Versions for -55°C to +125°C.

²Sample tested to ensure compliance.

Specifications subject to change without notice.

CAUTION

ESD (electrostatic discharge) sensitive device. The digital control inputs are diode protected; however, permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. The protective foam should be discharged to the destination socket before devices are removed.
