
USB 2.0 Hub and 10/100 Ethernet Controller

Highlights

- Two downstream ports, one upstream port
 - Two integrated downstream USB 2.0 PHYs
 - One integrated upstream USB 2.0 PHY
- Integrated 10/100 Ethernet MAC with full-duplex support
- Integrated 10/100 Ethernet PHY with HP Auto-MDIX
- Implements Reduced Power Operating Modes
- Minimized BOM Cost
 - Single 25 MHz crystal (Eliminates cost of separate crystals for USB and Ethernet)
 - Built-in Power-On-Reset (POR) circuit (Eliminates requirement for external passive or active reset)

Target Applications

- Desktop PCs
- Notebook PCs
- Printers
- Game Consoles
- Embedded Systems
- Docking Stations

Key Features

- USB Hub
 - Fully compliant with Universal Serial Bus Specification Revision 2.0
 - HS (480 Mbps), FS (12 Mbps), and LS (1.5 Mbps) compatible
 - Two downstream ports, one upstream port
 - Port mapping and disable support
 - Port Swap: Programmable USB diff-pair pin location
 - PHY Boost: Programmable USB signal drive strength
 - Select presence of a permanently hardwired USB peripheral device on a port by port basis
 - Advanced power saving features
 - Downstream PHY goes into low power mode when port power to the port is disabled
 - Full Power Management with individual or ganged power control of each downstream port.
 - Integrated USB termination Pull-up/Pull-down resistors
 - Internal short circuit protection of USB differential signal pins

Key Features (continued)

- High-Performance 10/100 Ethernet Controller
 - Fully compliant with IEEE802.3/802.3u
 - Integrated Ethernet MAC and PHY
 - 10BASE-T and 100BASE-TX support
 - Full- and half-duplex support with flow control
 - Preamble generation and removal
 - Automatic 32-bit CRC generation and checking
 - Automatic payload padding and pad removal
 - Loop-back modes
 - TCP/UDP checksum offload support
 - Flexible address filtering modes
 - One 48-bit perfect address
 - 64 hash-filtered multicast addresses
 - Pass all multicast
 - Promiscuous mode
 - Inverse filtering
 - Pass all incoming with status report
 - Wakeup packet support
 - Integrated Ethernet PHY
 - Auto-negotiation, HP Auto-MDIX
 - Automatic polarity detection and correction
 - Energy Detect
- Power and I/Os
 - Three PHY LEDs
 - Eight GPIOs
 - Supports bus-powered and self-powered operation
 - Internal 1.8v core supply regulator
 - External 3.3v I/O supply
- Miscellaneous features
 - Optional EEPROM
 - Optional 24MHz reference clock output for partner hub
 - IEEE 1149.1 (JTAG) Boundary Scan
- Software
 - Windows 2000/XP/Vista Driver
 - Linux Driver
 - Win CE Driver
 - MAC OS Driver
 - EEPROM Utility
- Packaging
 - 64-pin QFN, lead-free RoHS compliant
- Environmental
 - Commercial Temperature Range (0°C to +70°C)
 - Industrial Temperature Range (-40°C to +85°C)
 - ±8 kV HBM without External Protection Devices
 - ±8 kV contact mode (IEC61000-4-2)
 - ±15 kV air-gap discharge mode (IEC61000-4-2)

TO OUR VALUED CUSTOMERS

It is our intention to provide our valued customers with the best documentation possible to ensure successful use of your Microchip products. To this end, we will continue to improve our publications to better suit your needs. Our publications will be refined and enhanced as new volumes and updates are introduced.

If you have any questions or comments regarding this publication, please contact the Marketing Communications Department via E-mail at docerrors@microchip.com. We welcome your feedback.

Most Current Data Sheet

To obtain the most up-to-date version of this data sheet, please register at our Worldwide Web site at:

<http://www.microchip.com>

You can determine the version of a data sheet by examining its literature number found on the bottom outside corner of any page. The last character of the literature number is the version number, (e.g., DS30000000A is version A of document DS30000000).

Errata

An errata sheet, describing minor operational differences from the data sheet and recommended workarounds, may exist for current devices. As device/documentation issues become known to us, we will publish an errata sheet. The errata will specify the revision of silicon and revision of document to which it applies.

To determine if an errata sheet exists for a particular device, please check with one of the following:

- Microchip's Worldwide Web site; <http://www.microchip.com>
- Your local Microchip sales office (see last page)

When contacting a sales office, please specify which device, revision of silicon and data sheet (include -literature number) you are using.

Customer Notification System

Register on our web site at www.microchip.com to receive the most current information on all of our products.

LAN9512/LAN9512i

1.0 INTRODUCTION

1.1 Block Diagram

FIGURE 1-1: INTERNAL BLOCK DIAGRAM

1.1.1 OVERVIEW

The LAN9512/LAN9512i is a high performance Hi-Speed USB 2.0 hub with a 10/100 Ethernet controller. With applications ranging from embedded systems, desktop PCs, notebook PCs, printers, game consoles, and docking stations, the LAN9512/LAN9512i is targeted as a high performance, low cost USB/Ethernet and USB/USB connectivity solution.

The LAN9512/LAN9512i contains an integrated USB 2.0 hub, two integrated downstream USB 2.0 PHYs, an integrated upstream USB 2.0 PHY, a 10/100 Ethernet PHY, a 10/100 Ethernet Controller, a TAP controller, and a EEPROM controller. A block diagram of the LAN9512/LAN9512i is provided in [Figure 1-1](#).

The LAN9512/LAN9512i hub provides over 30 programmable features, including:

- **PortMap** (also referred to as port remap) which provides flexible port mapping and disabling sequences. The downstream ports of the LAN9512/LAN9512i hub can be reordered or disabled in any sequence to support multiple platform designs with minimum effort. For any port that is disabled, the LAN9512/LAN9512i automatically reorders the remaining ports to match the USB host controller's port numbering scheme.
- **PortSwap** which adds per-port programmability to USB differential pair pin locations. PortSwap allows direct alignment of USB signals (D+/D-) to connectors avoiding uneven trace length or crossing of the USB differential signals on the PCB.
- **PHYBoost** which enables four programmable levels of USB signal drive strength in USB port transceivers. PHYBoost attempts to restore USB signal integrity that has been compromised by system level variables such as poor PCB layout, long cables, etc.

1.1.2 USB HUB

The integrated USB hub is fully compliant with the USB 2.0 Specification and will attach to a USB host as a Full-Speed Hub or as a Full-/High-Speed Hub. The hub supports Low-Speed, Full-Speed, and High-Speed (if operating as a High-Speed hub) downstream devices on all of the enabled downstream ports.

A dedicated Transaction Translator (TT) is available for each downstream facing port. This architecture ensures maximum USB throughput for each connected device when operating with mixed-speed peripherals.

The hub works with an external USB power distributed switch device to control V_{BUS} switching to downstream ports, and to limit current and sense over-current conditions.

All required resistors on the USB ports are integrated into the hub. This includes all series termination resistors on D+ and D- pins and all required pull-down and pull-up resistors on D+ and D- pins. The over-current sense inputs for the downstream facing ports have internal pull-up resistors.

Two external ports are available for general USB device connectivity.

1.1.3 ETHERNET CONTROLLER

The 10/100 Ethernet controller provides an integrated Ethernet MAC and PHY which are fully IEEE 802.3 10BASE-T and 802.3u 100BASE-TX compliant. The 10/100 Ethernet controller also supports numerous power management wakeup features, including “Magic Packet”, “Wake on LAN” and “Link Status Change”. These wakeup events can be programmed to initiate a USB remote wakeup.

The 10/100 Ethernet PHY integrates an IEEE 802.3 physical layer for twisted pair Ethernet applications. The PHY block includes support for auto-negotiation, full or half-duplex configuration, auto-polarity correction and Auto-MDIX. Minimal external components are required for the utilization of the integrated PHY.

The Ethernet controller implements four USB endpoints: Control, Interrupt, Bulk-in, and Bulk-out. The Bulk-in and Bulk-out Endpoints allow for Ethernet reception and transmission respectively. Implementation of vendor-specific commands allows for efficient statistics gathering and access to the Ethernet controller’s system control and status registers.

1.1.4 EEPROM CONTROLLER

The LAN9512/LAN9512i contains an EEPROM controller for connection to an external EEPROM. This allows for the automatic loading of static configuration data upon power-on reset, pin reset, or software reset. The EEPROM can be configured to load USB descriptors, USB device configuration, and the MAC address.

1.1.5 PERIPHERALS

The LAN9512/LAN9512i also contains a TAP controller, and provides three PHY LED indicators, as well as eight general purpose I/O pins. All GPIOs can serve as remote wakeup events when LAN9512/LAN9512i is in a suspended state.

The integrated IEEE 1149.1 compliant TAP controller provides boundary scan via JTAG.

1.1.6 POWER MANAGEMENT

The LAN9512/LAN9512i features three variations of USB suspend: SUSPEND0, SUSPEND1, and SUSPEND2. These modes allow the application to select the ideal balance of remote wakeup functionality and power consumption.

- **SUSPEND0:** Supports GPIO, “Wake On LAN”, and “Magic Packet” remote wakeup events. This suspend state reduces power by stopping the clocks of the MAC and other internal modules.
- **SUSPEND1:** Supports GPIO and “Link Status Change” for remote wakeup events. This suspend state consumes less power than SUSPEND0.
- **SUSPEND2:** Supports only GPIO assertion for a remote wakeup event. This is the default suspend mode for the LAN9512/LAN9512i.

LAN9512/LAN9512I

2.0 PIN DESCRIPTION AND CONFIGURATION

FIGURE 2-1: LAN9512/LAN9512I 64-QFN PIN ASSIGNMENTS (TOP VIEW)

NOTE: When HP Auto-MDIX is activated, the TXN/TXP pins can function as RXN/RXP and vice-versa

NOTE: Exposed pad (VSS) on bottom of package must be connected to ground

TABLE 2-1: EEPROM PINS

Num PINS	Name	Symbol	Buffer Type	Description
1	EEPROM Data In	EEDI	IS (PD)	This pin is driven by the EEDO output of the external EEPROM.
1	EEPROM Data Out	EEDO	O8	This pin drives the EEDI input of the external EEPROM.
1	EEPROM Chip Select	EECS	O8	This pin drives the chip select output of the external EEPROM.
1	EEPROM Clock	EECLK	O8	This pin drives the EEPROM clock of the external EEPROM.

TABLE 2-2: JTAG PINS

Num PINS	Name	Symbol	Buffer Type	Description
1	JTAG Test Port Reset	nTRST	IS	This active low pin functions as the JTAG test port reset input. Note: This pin should be tied high if it is not used.
1	JTAG Test Mode Select	TMS	IS	This pin functions as the JTAG test mode select.
1	JTAG Test Data Input	TDI	IS	This pin functions as the JTAG data input.
1	JTAG Test Data Out	TDO	O12	This pin functions as the JTAG data output.
1	JTAG Test Clock	TCK	IS	This pin functions as the JTAG test clock. This pin should be tied high through a 10 kΩ resistor.

LAN9512/LAN9512I

TABLE 2-3: MISCELLANEOUS PINS

Num PINS	Name	Symbol	Buffer Type	Description
1	System Reset	nRESET	IS	This active low pin allows external hardware to reset the device. Note: This pin should be tied high if it is not used.
1	Ethernet Full-Duplex Indicator LED	nFDX_LED	OD12 (PU)	This pin is driven low (LED on) when the Ethernet link is operating in full-duplex mode.
	General Purpose I/O 0	GPIO0	IS/O12/OD12 (PU)	This General Purpose I/O pin is fully programmable as either a push-pull output, an open-drain output, or a Schmitt-triggered input.
1	Ethernet Link Activity Indicator LED	nLNKA_LED	OD12 (PU)	This pin is driven low (LED on) when a valid link is detected. This pin is pulsed high (LED off) for 80 mS whenever transmit or receive activity is detected. This pin is then driven low again for a minimum of 80 mS, after which time it will repeat the process if TX or RX activity is detected. Effectively, LED2 is activated solid for a link. When transmit or receive activity is sensed, LED2 will function as an activity indicator.
	General Purpose I/O 1	GPIO1	IS/O12/OD12 (PU)	This General Purpose I/O pin is fully programmable as either a push-pull output, an open-drain output, or a Schmitt-triggered input.
1	Ethernet Speed Indicator LED	nSPD_LED	OD12 (PU)	This pin is driven low (LED on) when the Ethernet operating speed is 100 Mbps, or during auto-negotiation. This pin is driven high during 10Mbps operation, or during line isolation.
	General Purpose I/O 2	GPIO2	IS/O12/OD12 (PU)	This General Purpose I/O pin is fully programmable as either a push-pull output, an open-drain output, or a Schmitt-triggered input.
1	General Purpose I/O 3	GPIO3	IS/O8/OD8 (PU)	This General Purpose I/O pin is fully programmable as either a push-pull output, an open-drain output, or a Schmitt-triggered input.
1	General Purpose I/O 4	GPIO4	IS/O8/OD8 (PU)	This General Purpose I/O pin is fully programmable as either a push-pull output, an open-drain output, or a Schmitt-triggered input.
1	General Purpose I/O 5	GPIO5	IS/O8/OD8 (PU)	This General Purpose I/O pin is fully programmable as either a push-pull output, an open-drain output, or a Schmitt-triggered input.
1	General Purpose I/O 6	GPIO6	IS/O8/OD8 (PU)	This General Purpose I/O pin is fully programmable as either a push-pull output, an open-drain output, or a Schmitt-triggered input.
1	General Purpose I/O 7	GPIO7	IS/O8/OD8 (PU)	This General Purpose I/O pin is fully programmable as either a push-pull output, an open-drain output, or a Schmitt-triggered input.

TABLE 2-3: MISCELLANEOUS PINS (CONTINUED)

Num PINS	Name	Symbol	Buffer Type	Description
1	Detect Upstream VBUS Power	VBUS_DET	IS_5V	<p>This pin detects the state of the upstream bus power. The Hub monitors VBUS_DET to determine when to assert the USBDP0 pin's internal pull-up resistor (signaling a connect event).</p> <p>For bus-powered hubs, this pin must be tied to VDD33IO.</p> <p>For self-powered hubs where the device is permanently attached to a host, VBUS_DET should be pulled to VDD33IO. For other self-powered applications, refer to the device reference schematic for additional connection information.</p>
1	Auto-MDIX Enable	AUTOMDIX_EN	IS	<p>Determines the default Auto-MDIX setting.</p> <p>0 = Auto-MDIX is disabled. 1 = Auto-MDIX is enabled.</p>
1	Test 1	TEST1	—	Used for factory testing, this pin must always be left unconnected.
1	Test 2	TEST2	—	Used for factory testing, this pin must always be connected to VSS for proper operation.
1	Test 3	TEST3	—	Used for factory testing, this pin must always be connected to VDD33IO for proper operation.
1	24 MHz Clock Enable	CLK24_EN	IS	This pin enables the generation of the 24 MHz clock on the CLK_24_OUT pin.
1	24 MHz Clock	CLK24_OUT	08	This pin outputs a 24 MHz clock that can be used a reference clock for a partner hub.
1	Test 4	TEST4	—	Used for factory testing, this pin must always be left unconnected.

TABLE 2-4: USB PINS

Num PINS	Name	Symbol	Buffer Type	Description
1	Upstream USB DMINUS 0	USBDM0	AIO	Upstream USB DMINUS signal.
1	Upstream USB DPLUS 0	USBDP0	AIO	Upstream USB DPLUS signal.
1	Downstream USB DMINUS 2	USBDM2	AIO	Downstream USB peripheral 2 DMINUS signal.
1	Downstream USB DPLUS 2	USBDP2	AIO	Downstream USB peripheral 2 DPLUS signal.

LAN9512/LAN9512I

TABLE 2-4: USB PINS (CONTINUED)

Num PINS	Name	Symbol	Buffer Type	Description
1	Downstream USB DMINUS 3	USBDM3	AIO	Downstream USB peripheral 3 DMINUS signal.
1	Downstream USB DPLUS 3	USBDP3	AIO	Downstream USB peripheral 3 DPLUS signal.
1	USB Port Power Control 2	PRTCTL2	IS/OD12 (PU)	<p>When used as an output, this pin enables power to downstream USB peripheral 2.</p> <p>When used as an input, this pin is used to sample the output signal from an external current monitor for downstream USB peripheral 2. An overcurrent condition is indicated when the signal is low.</p> <p>Refer to Section 2.2 for additional information.</p>
1	USB Port Power Control 3	PRTCTL3	IS/OD12 (PU)	<p>When used as an output, this pin enables power to downstream USB peripheral 3.</p> <p>When used as an input, this pin is used to sample the output signal from an external current monitor for downstream USB peripheral 3. An overcurrent condition is indicated when the signal is low.</p> <p>Refer to Section 2.2 for additional information.</p>
1	External USB Bias Resistor	USBRBIAS	AI	Used for setting HS transmit current level and on-chip termination impedance. Connect to an external 12K 1.0% resistor to ground.
1	USB PLL +1.8V Power Supply	VDD18USBPLL	P	Refer to the LAN9512/LAN9512I reference schematics for additional connection information.
1	Crystal Input	XI	ICLK	<p>External 25 MHz crystal input.</p> <p>Note: This pin can also be driven by a single-ended clock oscillator. When this method is used, XO should be left unconnected</p>
1	Crystal Output	XO	OCLK	External 25 MHz crystal output.

TABLE 2-5: ETHERNET PHY PINS

Num PINS	Name	Symbol	Buffer Type	Description
1	Ethernet TX Data Out Negative	TXN	AIO	Negative output of the Ethernet transmitter. The transmit data outputs may be swapped internally with receive data inputs when Auto-MDIX is enabled.
1	Ethernet TX Data Out Positive	TXP	AIO	Positive output of the Ethernet transmitter. The transmit data outputs may be swapped internally with receive data inputs when Auto-MDIX is enabled.

LAN9512/LAN9512I

TABLE 2-5: ETHERNET PHY PINS (CONTINUED)

Num PINS	Name	Symbol	Buffer Type	Description
1	Ethernet RX Data In Negative	RXN	AIO	Negative input of the Ethernet receiver. The receive data inputs may be swapped internally with transmit data outputs when Auto-MDIX is enabled.
1	Ethernet RX Data In Positive	RXP	AIO	Positive input of the Ethernet receiver. The receive data inputs may be swapped internally with transmit data outputs when Auto-MDIX is enabled.
7	+3.3V Analog Power Supply	VDD33A	P	Refer to the LAN9512/LAN9512i reference schematics for connection information.
1	External PHY Bias Resistor	EXRES	AI	Used for the internal bias circuits. Connect to an external 12.4K 1.0% resistor to ground.
1	Ethernet PLL +1.8V Power Supply	VDD18ETHPLL	P	Refer to the LAN9512/LAN9512i reference schematics for additional connection information.

TABLE 2-6: I/O POWER PINS, CORE POWER PINS, AND GROUND PAD

Num PINS	Name	Symbol	Buffer Type	Description
5	+3.3V I/O Power	VDD33IO	P	+3.3V Power Supply for I/O Pins. Refer to the LAN9512/LAN9512i reference schematics for connection information.
2	Digital Core +1.8V Power Supply Output	VDD18CORE	P	+1.8V power from the internal core voltage regulator. All VDD18CORE pins must be tied together for proper operation. Refer to the LAN9512/LAN9512i reference schematics for connection information.
1 Note 2-1	Ground	VSS	P	Ground

2.1 Power Connections

Figure 2-2 illustrates the power connections for LAN9512/LAN9512i.

FIGURE 2-2: POWER CONNECTIONS

2.2 Port Power Control

This section details the usage of the port power control pins PRTCTL[3:2].

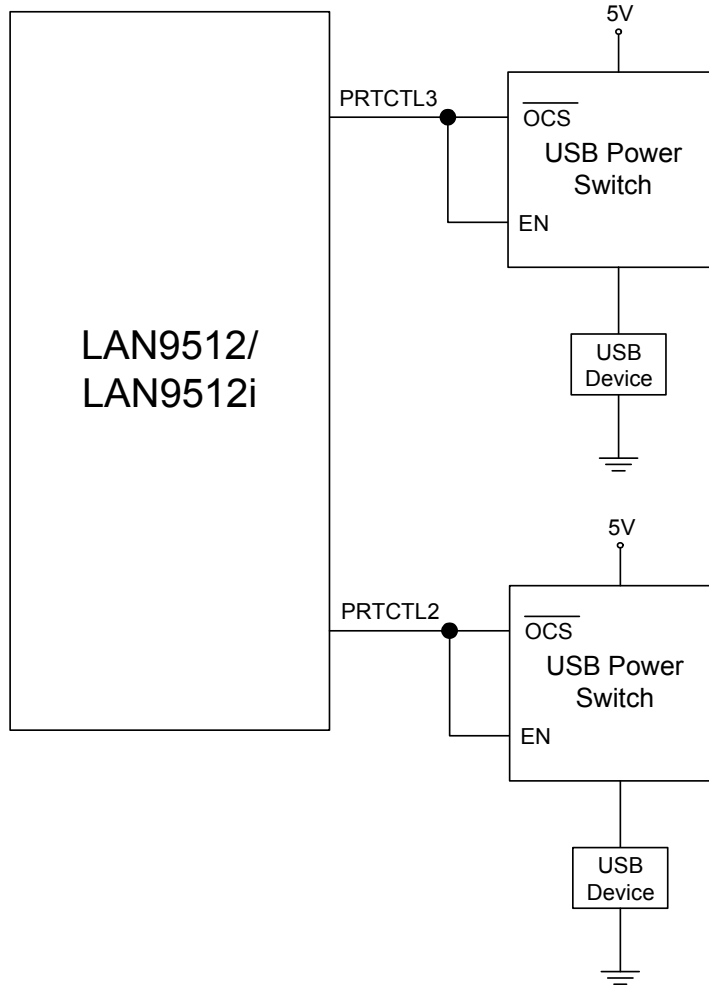

2.2.1 PORT POWER CONTROL USING A USB POWER SWITCH

The LAN9512/LAN9512i has a single port power control and over-current sense signal for each downstream port. When disabling port power, the driver will actively drive a '0'. To avoid unnecessary power dissipation, the internal pull-up resistor will be disabled at that time. When port power is enabled, the output driver is disabled and the pull-up resistor is

LAN9512/LAN9512i

enabled, creating an open drain output. If there is an over-current situation, the USB Power Switch will assert the open drain OCS signal. The Schmitt trigger input will recognize this situation as a low. The open drain output does not interfere. The overcurrent sense filter handles the transient conditions, such as low voltage, while the device is powering up.

FIGURE 2-3: PORT POWER CONTROL WITH USB POWER SWITCH

2.2.2 PORT POWER CONTROL USING A POLY FUSE

When using the LAN9512/LAN9512i with a poly fuse, an external diode must be used (See [Figure 2-4](#)). When disabling port power, the driver will drive a '0'. This procedure will have no effect since the external diode will isolate the pin from the load. When port power is enabled, the output driver is disabled and the pull-up resistor is enabled, which creates an open drain output. This means that the pull-up resistor is providing 3.3 volts to the anode of the diode. If there is an over-

current situation, the poly fuse will open. This will cause the cathode of the diode to go to 0_volts. The anode of the diode will be at 0.7_volts, and the Schmitt trigger input will register this as a low, resulting in an overcurrent detection. The open drain output does not interfere.

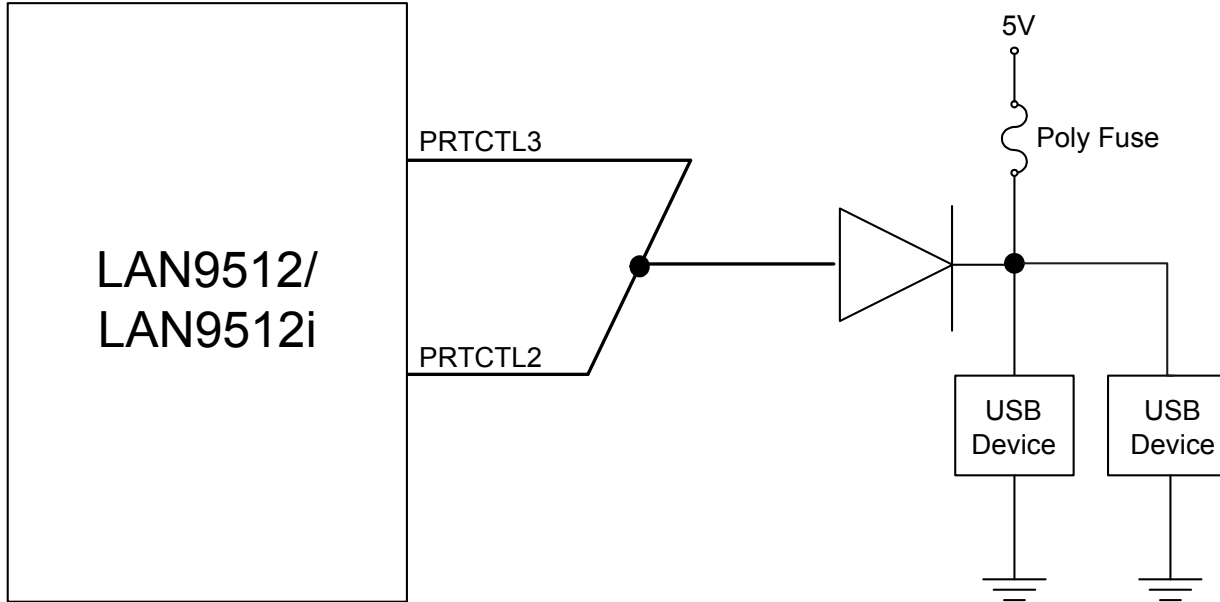

FIGURE 2-4: PORT POWER CONTROL WITH POLY FUSE

LAN9512/LAN9512i

Many customers use a single poly fuse to power all their devices. For the ganged situation, all power control pins must be tied together.

FIGURE 2-5: PORT POWER WITH GANGED CONTROL WITH POLY FUSE

2.3 Buffer Types

TABLE 2-9: BUFFER TYPES

Buffer Type	Description
IS	Schmitt-triggered Input
IS_5V	5V Tolerant Schmitt-triggered Input
O8	Output with 8 mA sink and 8 mA source
OD8	Open-drain output with 8 mA sink
O12	Output with 12 mA sink and 12 mA source
OD12	Open-drain output with 12 mA sink
PU	50 μ A (typical) internal pull-up. Unless otherwise noted in the pin description, internal pull-ups are always enabled. Note: Internal pull-up resistors prevent unconnected inputs from floating. Do not rely on internal resistors to drive signals external to LAN9512/LAN9512i. When connected to a load that must be pulled high, an external resistor must be added.

TABLE 2-9: BUFFER TYPES (CONTINUED)

Buffer Type	Description
PD	50 μ A (typical) internal pull-down. Unless otherwise noted in the pin description, internal pull-downs are always enabled. Note: Internal pull-down resistors prevent unconnected inputs from floating. Do not rely on internal resistors to drive signals external to LAN9512/LAN9512i. When connected to a load that must be pulled low, an external resistor must be added.
AI	Analog input
AIO	Analog bidirectional
ICLK	Crystal oscillator input pin
OCLK	Crystal oscillator output pin
P	Power pin

LAN9512/LAN9512I

3.0 EEPROM CONTROLLER (EPC)

LAN9512/LAN9512i may use an external EEPROM to store the default values for the USB descriptors and the MAC address. The EEPROM controller supports most “93C46” type EEPROMs. A total of nine address bits are used to support 256/512 byte EEPROMs.

A 3-wire style 2K/4K EEPROM that is organized for 256/512 x 8-bit operation must be used.

The MAC address is used as the default Ethernet MAC address and is loaded into the MAC’s ADDRH and ADDRL registers. If a properly configured EEPROM is not detected, it is the responsibility of the Host LAN Driver to set the IEEE addresses.

After a system-level reset occurs, the device will load the default values from a properly configured EEPROM. The device will not accept USB transactions from the Host until this process is completed.

The EEPROM controller also allows the Host system to read, write and erase the contents of the Serial EEPROM.

3.1 EEPROM Format

Table 3-1 illustrates the format in which data is stored inside of the EEPROM.

Note the EEPROM offsets are given in units of 16-bit word offsets. A length field with a value of zero indicates that the field does not exist in the EEPROM. The device will use the field’s HW default value in this case.

- Note:** For Device Descriptors, the only valid values for the length are 0 and 18.
- Note:** For Configuration and Interface Descriptors, the only valid values for the length are 0 and 18.
- Note:** The EEPROM programmer must ensure that if a String Descriptor does not exist in the EEPROM, the referencing descriptor must contain 00h for the respective string index field.
- Note:** If no Configuration Descriptor is present in the EEPROM, then the Configuration Flags affect the values of bmAttributes and bMaxPower in the Ethernet Controller Configuration Descriptor.
- Note:** If all String Descriptor lengths are zero, then a Language ID will not be supported.

TABLE 3-1: EEPROM FORMAT

EEPROM Address	EEPROM Contents
00h	0xA5
01h	MAC Address [7:0]
02h	MAC Address [15:8]
03h	MAC Address [23:16]

[Table 3-2](#) describes the Configuration Flags

TABLE 3-2: CONFIGURATION FLAGS DESCRIPTION

Bit	Name	Description
7:3	RESERVED	00000b
2	Remote Wakeup Support	0 = The device does not support remote wakeup. 1 = The device supports remote wakeup.
1	RESERVED	0b
0	Power Method	0 = The device Controller is bus-powered. 1 = The device Controller is self-powered.

3.1.1 HUB CONFIGURATION

EEPROM offsets 20h through 39h comprise the Hub Configuration parameters. [Table 3-3](#) describes these parameters and their default ROM values (Values assumed if no valid EEPROM present).

TABLE 3-3: HUB CONFIGURATION

EEPROM Offset	Description	Default
20h	Vendor ID LSB Register (VIDL) Least Significant Byte of the Vendor ID. This is a 16-bit value that uniquely identifies the Vendor of the user device (assigned by USB-Interface Forum).	24h

TABLE 3-3: HUB CONFIGURATION (CONTINUED)

EEPROM Offset	Description	Default
21h	Vendor ID MSB (VIDM) Most Significant Byte of the Vendor ID. This is a 16-bit value that uniquely identifies the Vendor of the user device (assigned by USB-Interface Forum).	04h
22h	Product ID LSB Register (PIDL) Least Significant Byte of the Product ID. This is a 16-bit value that the Vendor can assign that uniquely identifies this particular product (assigned by the OEM).	12h
23h	Product ID MSB Register (PIDM) Most Significant Byte of the Product ID. This is a 16-bit value that the Vendor can assign that uniquely identifies this particular product (assigned by the OEM).	95h
24h	Device ID LSB Register (DIDL) Least Significant Byte of the Device ID. This is a 16-bit device release number in BCD format (assigned by the OEM).	00h
25h	Device ID MSB Register (DIDM) Most Significant Byte of the Device ID. This is a 16-bit device release number in BCD format (assigned by the OEM).	Note 3-1
26h	Config Data Byte 1 Register (CFG1) Refer to Table 3-4, "Config Data Byte 1 Register (CFG1) Format," on page 26 for details.	9Bh
27h	Config Data Byte 2 Register (CFG2) Refer to Table 3-5, "Config Data Byte 2 Register (CFG2) Format," on page 27 for details.	18h
28h	Config Data Byte 3 Register (CFG3) Refer to Table 3-6, "Config Data Byte 3 Register (CFG3) Format," on page 27 for details.	00h
29h	Non-Removable Devices Register (NRD) Indicates which port(s) include non-removable devices. 0 = Port is removable 1 = Port is non-removable Informs the host if one of the active ports has a permanent device that is not detachable from the Hub. Note: The device must provide its own descriptor data. Bit 7 = RESERVED Bit 6 = RESERVED Bit 5 = RESERVED Bit 4 = RESERVED Bit 3 = 1; Port 3 non-removable Bit 2 = 1; Port 2 non-removable Bit 1 = 1; Port 1 non-removable Bit 0 is RESERVED, always = 0b Note: Bit 1 must be set to 1 by firmware for proper identification of the Ethernet Controller as a non-removable device.	02h

LAN9512/LAN9512I

TABLE 3-4: CONFIG DATA BYTE 1 REGISTER (CFG1) FORMAT

Bits	Description	Default
7	<p>Self or Bus Power (SELF_BUS_PWR) Selects between Self or Bus-Powered operation.</p> <p>0 = Bus-Powered 1 = Self-Powered</p> <p>The Hub is either Self-Powered (draws less than 2 mA of upstream bus power) or Bus-Powered (limited to a 100 mA maximum of upstream power prior to being configured by the host controller).</p> <p>When configured as a Bus-Powered device, the SMSC Hub consumes less than 100 mA of current prior to being configured. After configuration, the Bus-Powered SMSC Hub (along with all associated hub circuitry, any embedded devices if part of a compound device, and 100 mA per externally available downstream port) must consume no more than 500 mA of upstream VBUS current. The current consumption is system dependent, and the OEM must ensure that the USB 2.0 specifications are not violated.</p> <p>When configured as a Self-Powered device, <1mA of upstream VBUS current is consumed and all ports are available, with each port being capable of sourcing 500 mA of current.</p>	1b
6	RESERVED	0b
5	<p>High Speed Disable (HS_DISABLE) Disables the capability to attach as either a High/Full-Speed device, and forces attachment as Full-Speed only (no High-Speed support).</p> <p>0 = High-/Full-Speed 1 = Full-Speed-Only (High-Speed disabled)</p>	0b
4	<p>Multiple TT Enable (MTT_ENABLE) Enables one transaction translator per port operation.</p> <p>Selects between a mode where only one transaction translator is available for all ports (Single-TT), or each port gets a dedicated transaction translator (Multi-TT).</p> <p>Note: The host may force Single-TT mode only.</p> <p>0 = Single TT for all ports. 1 = One TT per port (multiple TT's supported)</p>	1b
3	<p>EOP Disable (EOP_DISABLE) Disables EOP generation of EOF1 when in Full-Speed mode. During FS operation only, this permits the Hub to send EOP if no downstream traffic is detected at EOF1. See Section 11.3.1 of the <i>USB 2.0 Specification</i> for additional details.</p> <p>Note: Generation of an EOP at the EOF1 point may prevent a Host controller (operating in FS mode) from placing the USB bus in suspend.</p> <p>0 = An EOP is generated at the EOF1 point if no traffic is detected. 1 = EOP generation at EOF1 is disabled (note: this is normal USB operation).</p> <p>Note: This is a rarely used feature in the PC environment, existing drivers may not have been thoroughly debugged with this feature enabled. It is included because it is a permitted feature in Chapter 11 of the USB specification.</p>	1b

TABLE 3-9: STATUS/COMMAND REGISTER (STCD) FORMAT

Bits	Description	Default
7:2	RESERVED	000000b
1	Reset (RESET) Resets the internal memory back to nRESET assertion default settings. 0 = Normal Run/Idle State 1 = Force a reset of the registers to their default state Note: During this reset, this bit is automatically cleared to its default value of 0.	0b
0	USB Attach and Write Protect (USB_ATTACH) 0 = Device is in configuration state 1 = Hub will signal a USB attach event to an upstream device, and the internal memory (address range 00h - FEh) is “write-protected” to prevent unintentional data corruption. Note: This bit is write once and is only cleared by assertion of the external nRESET or POR.	1b

3.2 EEPROM Defaults

The signature value of 0xA5 is stored at address 0. A different signature value indicates to the EEPROM controller that no EEPROM or an un-programmed EEPROM is attached to the device. In this case, the hardware default values are used, as shown in [Table 3-10](#).

TABLE 3-10: EEPROM DEFAULTS

Field	Default Value
Ethernet Controller MAC Address	FFFFFFFFFFFFh
Ethernet Controller Full-Speed Polling Interval (mS)	01h

LAN9512/LAN9512I

TABLE 3-10: EEPROM DEFAULTS

Field	Default Value
Ethernet Controller Hi-Speed Polling Interval (mS)	04h
Ethernet Controller Configuration Flags	05h
Ethernet Controller Maximum Power (mA)	01h
Ethernet Controller Vendor ID	0424h
Ethernet Controller Product ID	EC00h

3.3 EEPROM Auto-Load

Certain system level resets (USB reset, POR, nRESET, and SRST) cause the EEPROM contents to be loaded into the device. After a reset, the EEPROM controller attempts to read the first byte of data from the EEPROM. If the value 0xA5 is read from the first address, then the EEPROM controller will assume that the external Serial EEPROM is configured for auto-loading. If a value other than 0xA5 is read from the first address, the EEPROM auto-load will not commence.

Note: The EEPROM contents are loaded for both the Hub and the Ethernet Controller as a result of a POR or nRESET. The USB reset results only in the loading of the MAC address from the EEPROM. A software reset (SRST) or a EEPROM Reload Command causes the EEPROM contents related solely to the Ethernet Controller to be loaded.

3.4 An Example of EEPROM Format Interpretation

Table 3-11 and Table 3-12 provide an example of how the contents of a EEPROM are formatted. Table 3-11 is a dump of the EEPROM memory (256-byte EEPROM), while Table 3-12 illustrates, byte by byte, how the EEPROM is formatted.

LAN9512/LAN9512I

4.0 OPERATIONAL CHARACTERISTICS

4.1 Absolute Maximum Ratings*

Supply Voltage (VDD33IO, VDD33A) (Note 4-1)	0V to +3.6V
Positive voltage on signal pins, with respect to ground (Note 4-2)	+6V
Negative voltage on signal pins, with respect to ground (Note 4-3)	-0.5V
Positive voltage on XI, with respect to ground	+4.6V
Positive voltage on XO, with respect to ground	+2.5V
Ambient Operating Temperature in Still Air (T_A)	Note 4-4
Storage Temperature	-55°C to +150°C
Lead Temperature Range	Refer to JEDEC Spec. J-STD-020
HBM ESD Performance per JESD 22-A114-E	+/- 8 kV
Contact Discharge ESD Performance per IEC61000-4-2 (Note 4-5)	+/- 8 kV
Air-Gap Discharge ESD Performance per IEC61000-4-2 (Note 4-5)	+/- 15 kV
Latch-up Performance per EIA/JESD 78	+/- 200 mA

Note 4-1 When powering this device from laboratory or system power supplies, it is important that the absolute maximum ratings not be exceeded or device failure can result. Some power supplies exhibit voltage spikes on their outputs when AC power is switched on or off. In addition, voltage transients on the AC power line may appear on the DC output. If this possibility exists, it is suggested that a clamp circuit be used.

Note 4-2 This rating does not apply to the following pins: XI, XO, EXRES, USBRBIAS.

Note 4-3 This rating does not apply to the following pins: EXRES, USBRBIAS.

Note 4-4 0°C to +70°C for commercial version, -40°C to +85°C for industrial version.

Note 4-5 Performed by independent 3rd party test facility.

*Stresses exceeding those listed in this section could cause permanent damage to the device. This is a stress rating only. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Functional operation of the device at any condition exceeding those indicated in [Section 4.2, "Operating Conditions**"](#), [Section 4.4, "DC Specifications"](#), or any other applicable section of this specification is not implied. Note, device signals are *NOT* 5 volt tolerant unless specified otherwise.

4.2 Operating Conditions**

Supply Voltage (VDD33A, VDD33BIAS, VDD33IO)	+3.3V +/- 300 mV
Ambient Operating Temperature in Still Air (T_A)	Note 4-4

**Proper operation of LAN9512/LAN9512i is guaranteed only within the ranges specified in this section.

4.3 Power Consumption

This section details the power consumption of the device as measured during various modes of operation. Power dissipation is determined by temperature, supply voltage, and external source/sink requirements.

4.3.1 SUSPEND0

TABLE 4-1: SUSPEND0 CURRENT CONSUMPTION AND POWER DISSIPATION (VDD33IO = VDD33A = 3.3V)

Parameter	Min	Typical	Max	Unit
Supply current (VDD33IO, VDD33A)	—	74	—	mA
Power Dissipation (Device Only)	—	245	—	mW
Power Dissipation (Device and Ethernet components)	—	379	—	mW

4.3.2 SUSPEND1

TABLE 4-2: SUSPEND1 CURRENT CONSUMPTION AND POWER DISSIPATION (VDD33IO = VDD33A = 3.3V)

Parameter	Min	Typical	Max	Unit
Supply current (VDD33IO, VDD33A)	—	68	—	mA
Power Dissipation (Device Only)	—	224	—	mW
Power Dissipation (Device and Ethernet components)	—	229	—	mW

4.3.3 SUSPEND2

TABLE 4-3: SUSPEND2 CURRENT CONSUMPTION AND POWER DISSIPATION (VDD33IO = VDD33A = 3.3V)

Parameter	Min	Typical	Max	Unit
Supply current (VDD33IO, VDD33A)	—	4.2	—	mA
Power Dissipation (Device Only)	—	14.0	—	mW
Power Dissipation (Device and Ethernet components)	—	14.1	—	mW

4.3.4 OPERATIONAL CURRENT CONSUMPTION & POWER DISSIPATION

TABLE 4-4: OPERATIONAL CURRENT CONSUMPTION & POWER DISSIPATION (VDD33IO = VDD33A = 3.3V)

Parameter	Min	Typical	Max	Unit
100BASE-TX Full Duplex (USB High-Speed)				

LAN9512/LAN9512I

TABLE 4-4: OPERATIONAL CURRENT CONSUMPTION & POWER DISSIPATION (VDD33IO = VDD33A = 3.3V)

Parameter	Min	Typical	Max	Unit
Supply current (VDD33IO, VDD33A)	—	231	—	mA
Power Dissipation (Device Only)	—	763	—	mW
10BASE-T Full Duplex (USB High-Speed)				
Supply current (VDD33IO, VDD33A)	—	188	—	mA
Power Dissipation (Device Only)	—	621	—	mW
10BASE-T Full Duplex (USB Full-Speed)				
Supply current (VDD33IO, VDD33A)	—	152	—	mA
Power Dissipation (Device Only)	—	502	—	mW

Note: All values measured with maximum simultaneous traffic on the Ethernet port and all USB ports.

Note: Magnetic power consumption:
- 100BASE-TX: ~42 mA
- 10BASE-T: ~104 mA

4.4 DC Specifications

TABLE 4-5: I/O BUFFER CHARACTERISTICS

Parameter	Symbol	Min	Typ	Max	Units	Notes
IS Type Input Buffer						
Low Input Level	V_{ILI}	-0.3			V	
High Input Level	V_{IHI}			3.6	V	
Negative-Going Threshold	V_{ILT}	1.01	1.18	1.35	V	Schmitt trigger
Positive-Going Threshold	V_{IHT}	1.39	1.6	1.8	V	Schmitt trigger
SchmittTrigger Hysteresis ($V_{IHT} - V_{ILT}$)	V_{HYS}	345	420	485	mV	
Input Leakage ($V_{IN} = VSS$ or $VDD33IO$)	I_{IH}	-10		10	μA	Note 4-6
Input Capacitance	C_{IN}			2.5	pF	
IS_5V Type Input Buffer						
Low Input Level	V_{ILI}	-0.3			V	
High Input Level	V_{IHI}			5.5	V	
Negative-Going Threshold	V_{ILT}	1.01	1.18	1.35	V	Schmitt trigger
Positive-Going Threshold	V_{IHT}	1.39	1.6	1.8	V	Schmitt trigger
SchmittTrigger Hysteresis ($V_{IHT} - V_{ILT}$)	V_{HYS}	345	420	485	mV	
Input Leakage ($V_{IN} = VSS$ or $VDD33IO$)	I_{IH}	-10		10	μA	Note 4-6
Input Leakage ($V_{IN} = 5.5V$)	I_{IH}			120	μA	Note 4-6, Note 4-7
Input Capacitance	C_{IN}			3.5	pF	
O8 Type Buffers						
Low Output Level	V_{OL}			0.4	V	$I_{OL} = 8mA$
High Output Level	V_{OH}	$VDD33IO - 0.4$			V	$I_{OH} = -8mA$
OD8 Type Buffer						
Low Output Level	V_{OL}			0.4	V	$I_{OL} = 8mA$
O12 Type Buffers						
Low Output Level	V_{OL}			0.4	V	$I_{OL} = 12mA$
High Output Level	V_{OH}	$VDD33IO - 0.4$			V	$I_{OH} = -12mA$
OD12 Type Buffer						
Low Output Level	V_{OL}			0.4	V	$I_{OL} = 12mA$

LAN9512/LAN9512I

TABLE 4-5: I/O BUFFER CHARACTERISTICS (CONTINUED)

Parameter	Symbol	Min	Typ	Max	Units	Notes
ICLK Type Buffer (XI Input)						Note 4-8
Low Input Level	V_{ILi}	-0.3		0.5	V	
High Input Level	V_{IHl}	1.4		3.6	V	

Note 4-6 This specification applies to all inputs and tri-stated bidirectional pins. Internal pull-down and pull-up resistors add +/- 50 μ A per-pin (typical).

Note 4-7 This is the total 5.5V input leakage for the entire device.

Note 4-8 XI can optionally be driven from a 25 MHz single-ended clock oscillator.

TABLE 4-6: 100BASE-TX TRANSCEIVER CHARACTERISTICS

Parameter	Symbol	Min	Typ	Max	Units	Notes
Peak Differential Output Voltage High	V_{PPH}	950	—	1050	mVpk	Note 4-9
Peak Differential Output Voltage Low	V_{PPL}	-950	—	-1050	mVpk	Note 4-9
Signal Amplitude Symmetry	V_{SS}	98	—	102	%	Note 4-9
Signal Rise and Fall Time	T_{RF}	3.0	—	5.0	nS	Note 4-9
Rise and Fall Symmetry	T_{RFS}	—	—	0.5	nS	Note 4-9
Duty Cycle Distortion	D_{CD}	35	50	65	%	Note 4-10
Overshoot and Undershoot	V_{OS}	—	—	5	%	—
Jitter	—	—	—	1.4	nS	Note 4-11

Note 4-9 Measured at line side of transformer, line replaced by 100 Ω (+/- 1%) resistor.

Note 4-10 Offset from 16 nS pulse width at 50% of pulse peak.

Note 4-11 Measured differentially.

TABLE 4-7: 10BASE-T TRANSCEIVER CHARACTERISTICS

Parameter	Symbol	Min	Typ	Max	Units	Notes
Transmitter Peak Differential Output Voltage	V_{OUT}	2.2	2.5	2.8	V	Note 4-12
Receiver Differential Squelch Threshold	V_{DS}	300	420	585	mV	—

Note 4-12 Min/max voltages guaranteed as measured with 100 Ω resistive load.

4.5 AC Specifications

This section details the various AC timing specifications of the LAN9512/LAN9512i.

Note: The USBDP and USBDM pin timing adheres to the USB 2.0 specification. Refer to the *Universal Serial Bus Revision 2.0* specification for detailed USB timing information.

4.5.1 EQUIVALENT TEST LOAD

Output timing specifications assume the 25 pF equivalent test load illustrated in [Figure 4-1](#) below.

FIGURE 4-1: OUTPUT EQUIVALENT TEST LOAD

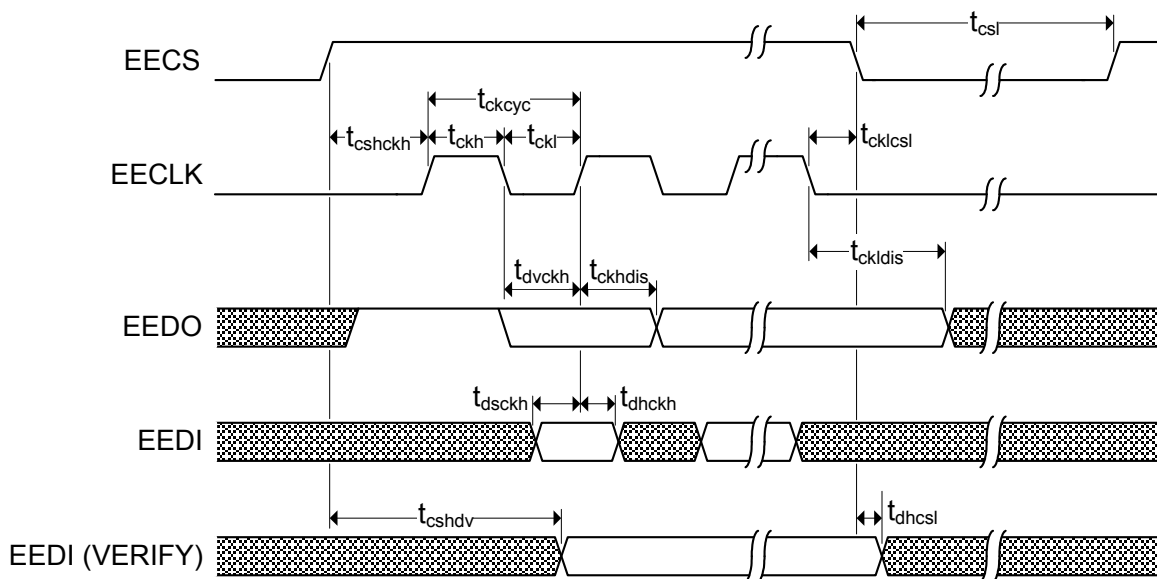

4.5.2 RESET TIMING

The nRESET pin input assertion time must be a minimum of 1 μ S. Assertion of nRESET is not a requirement. However, if used, it must be asserted for the minimum period specified.

4.5.3 EEPROM TIMING

The following specifies the EEPROM timing requirements for LAN9512/LAN9512i:

FIGURE 4-2: EEPROM TIMING

LAN9512/LAN9512I

TABLE 4-8: EEPROM TIMING VALUES

Symbol	Description	Min	TYP	Max	Units
t_{ckcyc}	EECLK Cycle time	1110	—	1130	ns
t_{ckh}	EECLK High time	550	—	570	ns
t_{ckl}	EECLK Low time	550	—	570	ns
t_{cshckh}	EECS high before rising edge of EECLK	1070	—	—	ns
t_{cklcsl}	EECLK falling edge to EECS low	30	—	—	ns
t_{dvckh}	EEDO valid before rising edge of EECLK	550	—	—	ns
t_{ckhdis}	EEDO disable after rising edge EECLK	550	—	—	ns
t_{dsckh}	EEDI setup to rising edge of EECLK	90	—	—	ns
t_{dhckh}	EEDI hold after rising edge of EECLK	0	—	—	ns
t_{ckldis}	EECLK low to data disable (OUTPUT)	580	—	—	ns
t_{cshdv}	EEDIO valid after EECS high (VERIFY)	—	—	600	ns
t_{dhcsl}	EEDIO hold after EECS low (VERIFY)	0	—	—	ns
t_{csl}	EECS low	1070	—	—	ns

4.5.4 JTAG TIMING

This section specifies the JTAG timing of the device.

FIGURE 4-3: JTAG TIMING

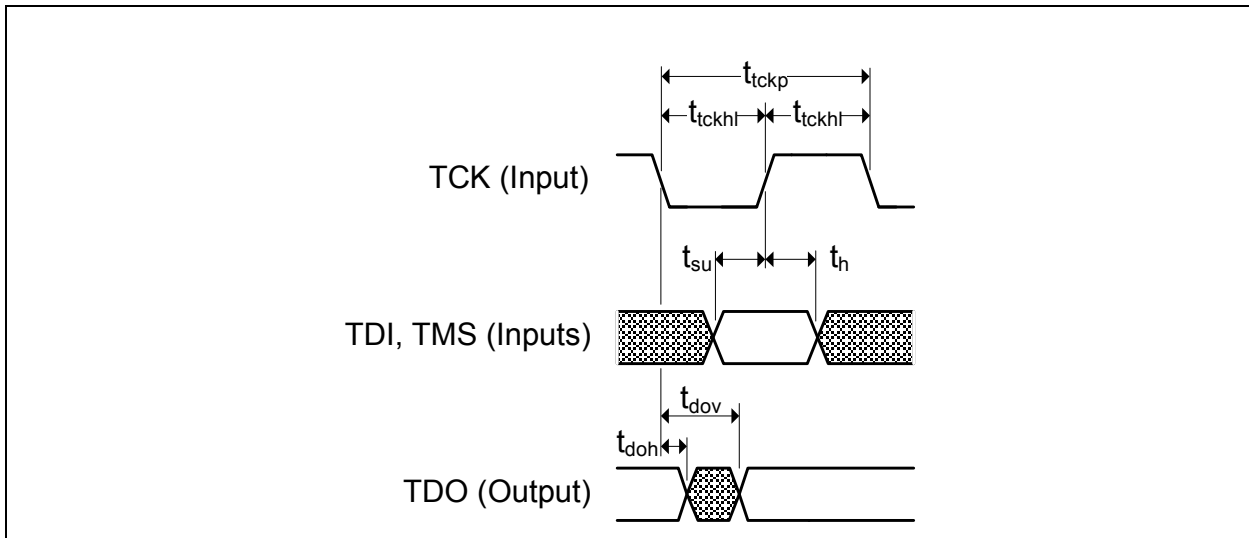

TABLE 4-9: JTAG TIMING VALUES

Symbol	Description	Min	Max	Units	Notes
t_{tckp}	TCK clock period	66.67	—	ns	—
t_{tckhl}	TCK clock high/low time	$t_{tckp} * 0.4$	$t_{tckp} * 0.6$	ns	—
t_{su}	TDI, TMS setup to TCK rising edge	10	—	ns	—
t_h	TDI, TMS hold from TCK rising edge	10	—	ns	—
t_{dov}	TDO output valid from TCK falling edge	—	16	ns	—
t_{doh}	TDO output hold from TCK falling edge	0	—	ns	—

4.6 Clock Circuit

LAN9512/LAN9512i can accept either a 25MHz crystal (preferred) or a 25MHz single-ended clock oscillator (+/- 50ppm) input. If the single-ended clock oscillator method is implemented, XO should be left unconnected and XI should be driven with a nominal 0-3.3V clock signal. The input clock duty cycle is 40% minimum, 50% typical and 60% maximum.

It is recommended that a crystal utilizing matching parallel load capacitors be used for the crystal input/output signals (XI/XO). See [Table 4-10](#) for the recommended crystal specifications.

TABLE 4-10: LAN9512/LAN9512I CRYSTAL SPECIFICATIONS

Parameter	Symbol	Min	Nom	Max	Units	Notes
Crystal Cut	AT, typ					—
Crystal Oscillation Mode	Fundamental Mode					—
Crystal Calibration Mode	Parallel Resonant Mode					—
Frequency	F_{fund}	—	25.000	—	MHz	—
Frequency Tolerance @ 25°C	F_{tol}	—	—	+/-50	PPM	Note 4-13
Frequency Stability Over Temp	F_{temp}	—	—	+/-50	PPM	Note 4-13
Frequency Deviation Over Time	F_{age}	—	+/-3 to 5	—	PPM	Note 4-14
Total Allowable PPM Budget		—	—	+/-50	PPM	Note 4-15
Shunt Capacitance	C_O	—	7 typ	—	pF	—
Load Capacitance	C_L	—	20 typ	—	pF	—
Drive Level	P_W	300	—	—	uW	—
Equivalent Series Resistance	R_1	—	—	50	Ω	—
Operating Temperature Range		Note 4-16	—	Note 4-17	°C	—
LAN9512/LAN9512i XI Pin Capacitance		—	3 typ	—	pF	Note 4-18
LAN9512/LAN9512i XO Pin Capacitance		—	3 typ	—	pF	Note 4-18

LAN9512/LAN9512I

- Note 4-13** The maximum allowable values for Frequency Tolerance and Frequency Stability are application dependent. Since any particular application must meet the IEEE +/-50 PPM Total PPM Budget, the combination of these two values must be approximately +/-45 PPM (allowing for aging).
- Note 4-14** Frequency Deviation Over Time is also referred to as Aging.
- Note 4-15** The total deviation for the Transmitter Clock Frequency is specified by IEEE 802.3u as +/- 50 PPM.
- Note 4-16** 0°C for commercial version, -40°C for industrial version.
- Note 4-17** +70°C for commercial version, +85°C for industrial version.
- Note 4-18** This number includes the pad, the bond wire and the lead frame. PCB capacitance is not included in this value. The XO/XI pin and PCB capacitance values are required to accurately calculate the value of the two external load capacitors. These two external load capacitors determine the accuracy of the 25.000 MHz frequency.

APPENDIX A: DATASHEET REVISION HISTORY

TABLE A-1: CUSTOMER REVISION HISTORY

REVISION LEVEL AND DATE	SECTION/FIGURE/ENTRY	CORRECTION
DS00002304A (11-02-16)	All	Converted document to Microchip template. Replaces SMSC Rev 1.2.
		Fixed typos.
	Table 2-2, "JTAG Pins," on page 7	Updated description for JTAG Test Clock.
Rev. 1.2 (02-29-12)	Section 4.3, "Power Consumption," on page 36	Added suspend 0, suspend 1, and suspend 3 power consumption data.
Rev. 1.1 (09-19-11)	All	Fixed typos.
	Section 2.1, "Power Connections," on page 12	Added power connections section with diagram.
Rev. 1.1 (11-24-09)	All: Cover, Ordering Code, Operational Characteristics	Added industrial temperature range option: (-40°C to +85°C)
	Section 4.5.4, "JTAG Timing," on page 42	Added JTAG timing information
Rev. 1.0 (04-20-09)	Section 4.1, "Absolute Maximum Ratings*," on page 36 and Cover	Added ESD information.
	, "," on page 18	Updated supported EEPROM information.
	Section 4.3, "Power Consumption," on page 36	Added power consumption values.
	Section 4.4, "DC Specifications," on page 39	Added input capacitance and leakage values.
	All	Fixed various typos.
Rev. 1.0 (03-03-09)	All	Initial Release

LAN9512/LAN9512I

NOTES:

THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://microchip.com/support>

LAN9512/LAN9512I

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u>	[X]	-	XXX	-	[X] ⁽¹⁾
Device	Temperature Range		Package		Tape and Reel Option
Device:	LAN9512				
Temperature Range:	Blank = 0°C to +70°C (Extended Commercial) i = -40°C to +85°C (Industrial)				
Package:	JZX = 64-pin QFN lead-free RoHS compliant				
Tape and Reel Option:	Blank = Standard packaging (tray)				

Examples:

- a) LAN9512-JZX for 64-pin, QFN lead-free RoHS compliant package (0 to +70°C temp range)
- b) LAN9512i-JZX for 64-pin, QFN lead-free RoHS compliant package (-40 to +85°C temp range)

Note 1: This product meets the halogen maximum concentration values per IEC61249-2-21 For RoHS compliance and environmental information, please visit www.microchip.com/rohs

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
== ISO/TS 16949 ==

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
