

STRUCTURE                      Silicon Monolithic Integrated Circuit  
 PRODUCTS                      Video-Audio Interface for LCD TV

TYPE                              B D 7 6 2 0 K S 2

### ABSOLUTE MAXIMUM RATING ( T a = 2 5 ° C )

| Item                        | Symbol | Rating          | Unit |
|-----------------------------|--------|-----------------|------|
| Power Supply Voltage 1      | V      | 6 . 0           | V    |
| Power Supply Voltage 2      | V      | - 8 . 0         | V    |
| Power Dissipation           | Pd     | ※ 1 1 5 0 0     | mW   |
| Operating Temperature Range | Topr   | - 2 5 ~ + 7 5   | °C   |
| Storage Temperature Range   | Tstg   | - 5 5 ~ + 1 5 0 | °C   |

※ 1 When absolute temperature exceeds Ta=25°C, rated value is reduced by 12mW/°C

### OPERATING RANGE

| Item             | Symbol      | Limit             | Unit |
|------------------|-------------|-------------------|------|
| Supply Voltage 1 | DVVCC, AVCC | 4 . 7 5 ~ 5 . 2 5 | V    |
| Supply Voltage 2 | DVGND, AGND | - 6 . 5 ~ - 7 . 5 | V    |

- ※ This product is not designed for protection against radioactive rays.
- ※ DVVCC · AVCC should use the same power source.
- ※ Improper operation will result if the input and/or output terminal is connected either to the supply Lines or the surface connection terminal and also when insufficient power is supplied to the IC.
- ※ I<sup>2</sup>C BUS is compatible Version2.0 (first mode 400kbit/s) .

### FUNCTION

- Built-in 6 input Video switch, 3-input Y switch and 3-input C switch
- Input terminal (3ch) of the S1/S2 standard suitability
- Optional 75Ω driver output using external Tr
- Built-in path selector outside LPF
- Attaching HiZ control of video output (YVOUT2)
- Built-in gain adjuster of Video/Audio (0dB/6dB)
- I<sup>2</sup>C-BUS controlled  
(Protection diode is included on both sides of VCC, GND to the SCL, SDA terminal.)
- Optional Slave address modification (90H/92H)
- Internal MUTE function
- Built-in 7-input Audio selector (Lch, Rch)
- Internal changeable circuit (Audio input and output)
- Internal reversible circuit (Audio Lch↔Rch)
- Internal 2 outputs for external control port (open collector)

#### Application example

The application circuit is recommended for use. Make sure to confirm the adequacy of the characteristics. When using the circuit with changes to the external circuit constants, make sure to leave an adequate margin for the external components including static and transitional characteristics as well as dispersion of the IC. Note that ROHM cannot provide adequate confirmation of patents.

The product described in this specification is designed to be used with ordinary electronic equipment or devices (such as audio-visual equipment, office-automation equipment, communications devices, electrical appliances, and electronic toys). Should you intend to use this product with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

ROHM assumes no responsibility for use of any circuits described herein, no license under any patent or other right, and makes no representations that the circuits are free from patent infringement.

※1 400Hz HPF+30kHz LPF ON

※2 Vin=0.3Vpp,f=100Hz, 30kHz LPF ON

■ Cautions on use

- (1) Numbers and data in entries are representative design values and are not guaranteed values of the items.
- (2) Although we are confident in recommending the sample application circuits, carefully their characteristics further when using them. When modifying externally attached component constants before use, determine them so that they have sufficient margins by taking into account variations in externally attached components and the Rohm LSI, not only for static characteristics but also including transient characteristics.
- (3) Absolute maximum ratings  
If applied voltage, operating temperature range, or other absolute maximum ratings are exceeded, the LSI may be damaged. Do not apply voltages or temperatures that exceeded the absolute maximum ratings. If you think of a case in which absolute maximum ratings are exceeded, enforce fuses or other physical safety measures and investigate how not to apply the conditions under which absolute maximum ratings are exceeded to the LSI.
- (4) DVGND, AGND pins (-7V)  
Make the DVGND, AGND pin voltage such that it is lowest voltage even when operating below it. Actually confirm that the voltage of each pin does not become a lower voltage than the DVGND, AGND pin, including transient phenomena.  
GND pin (0V) is the DVBIAS, ABIAS pin.
- (5) Thermal design  
Perform thermal design in which there are adequate margins by taking into account the allowable power dissipation in actual states of use. Within the limits of operating temperature (-25°C~+75°C), although basic circuit functional operation is guaranteed. Please take into consideration enough for a hindsight. In the case of a set design, please circulation of the air of IC circumference secured according to installation a fan and PCB layout, and please sufficient measure against heat dissipation.
- (6) Shorts between pins and misinstallation  
When mounting the LSI on a board, pay adequate attention to orientation and placement discrepancies of the LSI. If it is misinstalled and the power is turned on, the LSI may be damaged. It also may be damaged if it is shorted by a foreign substance coming between pins of the LSI or between a pin and a power supply or a pin and a GND.
- (7) Operation in strong magnetic fields  
Adequately evaluate use in a strong magnetic field, since there is a possibility of malfunction.
- (8) Supply voltage of operation  
Although basic circuit function is guaranteed within the limits of supply voltage(1: 4.75V~5.25V, 2: -6.5V~-7.5V) of operation. Please be sure element and each parameter, when this device use.
- (9) Please lay out outside parts nearest IC, and set lines from output amplifier short.
- (10) Please lay out the coupling capacitor nearest IC and each pin.
- (11) VCC for this IC should use the same power source. And impedance should connect as well as possible for each VCC pin, for each GND pin.

### Notes

- No technical content pages of this document may be reproduced in any form or transmitted by any means without prior permission of ROHM CO.,LTD.
- The contents described herein are subject to change without notice. The specifications for the product described in this document are for reference only. Upon actual use, therefore, please request that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

#### About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.

Thank you for your accessing to ROHM product informations.
