

- Operates as GTL-/GTL/GTL+ to LVTTTL or LVTTTL to GTL-/GTL/GTL+ Translator
- Series Termination on TTL Outputs of 30 Ω
- Latch-Up Testing to JEDEC Standard JESD 78 Exceeds 500 mA
- ESD Performance Tested Per JESD 22
  - 2000-V Human-Body Model (A114-B, Class II)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)

## description

The SN74GTL2006 is a 13-bit translator to interface between the 3.3-V LVTTTL chipset I/O and the Xeon™ processor GTL-/GTL/GTL+ I/O. The device is designed for platform health management in dual-processor applications.

## PIN DESCRIPTION

PIN NUMBER	SYMBOL	NAME AND FUNCTION
1	V <sub>REF</sub>	GTL reference voltage
2–6, 8, 10–13, 15	nAn	Data inputs/outputs (LVTTTL)
7, 9, 16, 17–27	nBn	Data inputs/outputs (GTL-/GTL/GTL+)
14	GND	Ground (0 V)
28	V <sub>CC</sub>	Positive supply voltage

## 13-BIT GTL-/GTL/GTL+ TO LVTTTL TRANSLATOR

SCES619 – DECEMBER 2004

### absolute maximum ratings over operating free-air temperature (unless otherwise noted)†‡

Supply voltage range, $V_{CC}$	–0.5 to 4.6 V
Input voltage range, $V_I$ (see Note 2): A port (LVTTTL)	–0.5 to 4.6 V
B port (GTL)	–0.5 to 4.6 V
Output voltage range, $V_O$ (output in OFF or HIGH state)(see Note 2): A port	–0.5 to 4.6 V
B port	–0.5 to 4.6 V
Input diode current, $I_{IK}$ ( $V_I < 0$ )	–50 mA
Output diode current, $I_{OK}$ ( $V_O < 0$ )	–50 mA
Current into any output in the LOW state: A port	32 mA
B port	30 mA
Current into any output in the HIGH state, A port	–32 mA
Storage temperature range, $T_{stg}$	–60 to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

‡ Voltages are referenced to GND (ground = 0 V).

- NOTES: 1. The performance capability of a high-performance integrated circuit, in conjunction with its thermal environment, can create junction temperatures that are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150°C.
2. The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.

**APPLICATION INFORMATION**

**frequently asked questions**

**Question 1:** On SN74GTL2006 LVTTL inputs, specifically 10AI1 and 10AI2, when the device is powered down, these inputs may be pulled up to 3.3 V, and we want to ensure that there is no leakage path to the power rail under this condition. Are the LVTTL inputs high impedance when the device is powered down, and will there be any leakage?

**Answer 1:** When the device is powered down, the LVTTL inputs are in a high-impedance state and do not leak to  $V_{DD}$  if they are pulled high while the device is powered down.

**Question 2:** Do all the LVTTL inputs have the same powered-down characteristic?

**Answer 2:** Yes

**Question 3:** What is the condition of the other GTL I/O and LVTTL output pins when the device is powered down?

**Answer 3:** The open-drain outputs, both GTL and LVTTL, do not leak to the power supply if they are pulled high while the device is powered down. The GTL inputs also do not leak to the power supply under the same conditions. The LVTTL totem-pole outputs, however, are not open-drain type outputs, and there will be current flow on these pins if they are pulled high when  $V_{DD}$  is at ground.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
