

**DESCRIPTION**

- 3.3V and 5V power supply options
- 250ps propagation delay
- High bandwidth output transitions
- $\Omega$  input pull-down resistors
- Replaces SY10/100EL16
- Improved output waveform characteristics
- x3mm) MSOP and SOIC package

The SY10/100EL16V are differential receivers. The devices are functionally equivalent to the E116 devices, with higher performance capabilities. With output transition times significantly faster than the E116, the EL16V is ideally suited for interfacing with high-frequency sources.

The EL16V provides a VBB output for either single-ended use or as a DC bias for AC coupling to the device. The VBB pin should be used only as a bias for the EL16V as its current sink/source capability is limited. Whenever used, the VBB pin should be bypassed to ground via a 0.01 $\mu$ F capacitor.

Under open input conditions (pulled to VEE), internal input clamps will force the Q output LOW.

**PIN NAMES**

Pin	Function
D	Data Inputs
Q	Data Outputs
VBB	Reference Voltage Output

**PACKAGE/ORDERING INFORMATION**

8-Pin MSOP (K8-1)  
8-Pin SOIC (Z8-1)

**Ordering Information<sup>(1)</sup>**

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY10EL16VKC	K8-1	Commercial	HEL16V	Sn-Pb

**Notes:**

1. Contact factory for die availability. Dice are guaranteed at T<sub>A</sub> = 25°C, DC Electricals only.
2. Tape and Reel.
3. Pb-Free package is recommended for new designs.

**PRODUCT/PROCESS INFORMATION**

Bipolar
Per Mil Std. 883 Human Body Model, >2.0kV (all pins).

## ABSOLUTE MAXIMUM RATINGS<sup>(1)</sup>

	Rating	Value	Unit	
	Power Supply Voltage ( $V_{EE} = 0$ )	+6.0 to 0	V	
	Power Supply Voltage ( $V_{CC} = 0$ )	-6.0 to 0	V	
	Input Voltage ( $V_{CC} = 0V$ , $V_{IN}$ not more negative than $V_{EE}$ )	-6.0 to 0	V	
	Input Voltage ( $V_{EE} = 0V$ , $V_{IN}$ not more positive than $V_{CC}$ )	+6.0 to 0	V	
	Output Current	-Continuous -Surge	50 100	mA
	Lead Temperature Range (soldering, 20sec.)	+260	°C	
	Operating Temperature Range	-40 to +85	°C	
	Storage Temperature Range	-65 to +150	°C	
$\theta$	Thermal Resistance (Junction-to-Ambient)	-Still Air -500lfpm	160 109	°C/W °C/W
$\theta$	Thermal Resistance (Junction-to-Case)		39	°C/W
	Mil Std. 883 Human Body Model, All Pins	>2.0k	V	

Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Parametric values specified at: 10/100EL16V Series: -3.0V to -5.5V.

Duty cycle skew is the difference between a  $t_{PLH}$  and  $t_{PHL}$  propagation delay through a device.

Minimum input swing for which AC parameters are guaranteed. The device has a DC gain of  $\approx 40$ .

The CMR range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between  $V_{PP}$  min. and 1V. The lower end of the CMR range varies 1:1 with  $V_{EE}$ . The numbers in the spec table assume a nominal  $V_{EE} = -3.3V$ . Note for PECL operation, the  $V_{CMR}$  (min) will be fixed at  $3.3V - |V_{CMR}(\text{min})|$ .

Specification for packaged product only.

Rev. 01

**Package Notes:**

**Note 1.** Package meets Level 1 moisture sensitivity.

Rev. 03

**Package Notes:**

**Note 1.** Package meets Level 1 moisture sensitivity.
