DUAL SUPPLY, LOW ON-STATE RESISTANCE SPST CMOS ANALOG SWITCHES

FEATURES

- ±1-V to ±6-V Dual-Supply Operation
- Specified ON-State Resistance:
  - 25 Ω Max With ±5-V Supply
  - 35 Ω Max With ±3.3-V Supply
  - 47 Ω Max With ±1.8-V Supply
- Specified Low OFF-Leakage Currents:
  - 5 nA at 25°C
  - 10 nA at 85°C
- Specified Low ON-Leakage Currents:
  - 5 nA at 25°C
  - 10 nA at 85°C
- Low Charge Injection: 13 pC (±5-V Supply)
- Fast Switching Speed:
  t_{ON} = 85 ns, t_{OFF} = 50 ns (±5-V Supply)
- Break-Before-Make Operation ($t_{ON} > t_{OFF}$)
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
  - 2500-V Human-Body Model (A114-F)
  - 1000-V Charged-Device Model (C101-C)
  - 250-V Machine Model (A115-A)

DESCRIPTION/ORDERING INFORMATION

The TS12A4516/TS12A4517 are single pole/single throw (SPST), low-voltage, dual-supply CMOS analog switches, with very low switch ON-state resistance. The TS12A4516 is normally open (NO). The TS12A4517 is normally closed (NC).

These CMOS switches can operate continuously with a dual supplies between ±1 V and ±6 V [(2 V < (V_+ – V_-) < 12 V]. Each switch can handle rail-to-rail analog signals. The OFF-leakage current maximum is only 5 nA at 25°C or 10 nA at 85°C.

For pin-compatible parts for use with single supply, see the TS12A4514/TS12A4515.

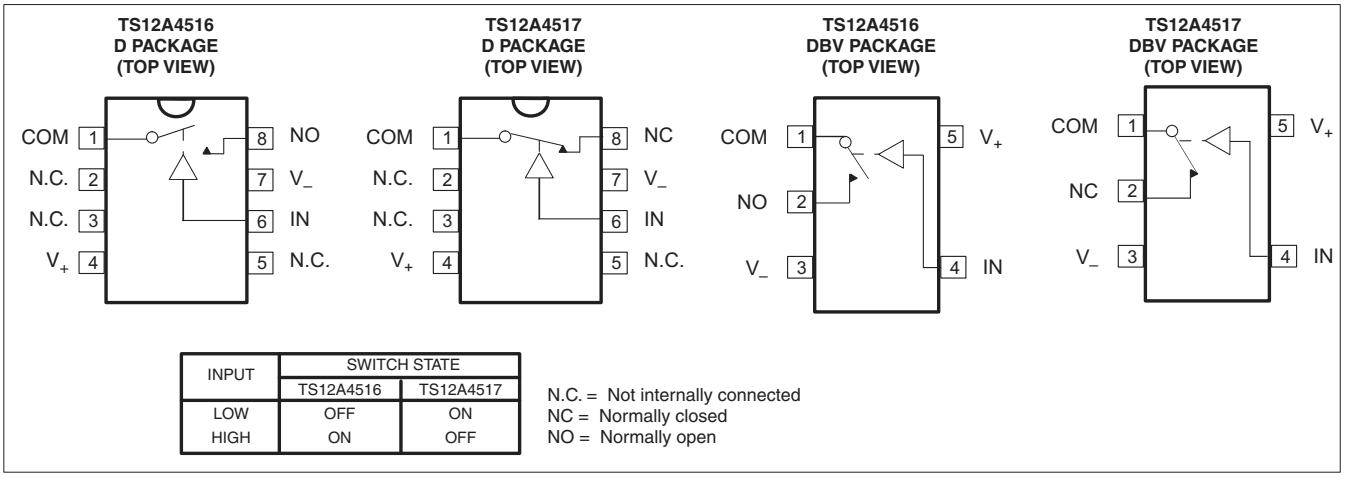
ORDERING INFORMATION

T_A	PACKAGE(1)(2)		ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	SOIC – D	Reel of 1500	TS12A4516D	YD516
		Reel of 2500	TS12A4516DR	
	SOP (SOT-23) – DBV	Reel of 3000	TS12A4516DBVR	9CL_
	SOIC – D	Reel of 1500	TS12A4517D	YD517
		Reel of 2500	TS12A4517DR	
	SOP (SOT-23) – DBV	Reel of 3000	TS12A4517DBVR	9CM_

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

(2) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.

PIN CONFIGURATIONS



INPUT	SWITCH STATE	
	TS12A4516	TS12A4517
LOW	OFF	ON
HIGH	ON	OFF

N.C. = Not internally connected
NC = Normally closed
NO = Normally open

Absolute Minimum and Maximum Ratings(1)(2)

voltages referenced to 0 V

			MIN	MAX	UNIT
V_+	Supply voltage range		–0.3	13	V
V_{NC} V_{NO} V_{COM}	Analog voltage range(3)		V_- –0.3	V_+ + 0.3	V
V_{IN}	Logic input range		V_- –0.3	V_+ + 0.3	V
	Continuous current into any terminal			±20	mA
	Peak current, NO or COM (pulsed at 1 ms, 10% duty cycle)			±30	mA
	ESD per method 3015.7			>2000	V
	Continuous power dissipation (T_A = 70°C)	8-pin SOIC (derate 5.88 mW/°C above 70°C)		471	mW
		5-pin SOT23-5 (derate 7.1 mW/°C above 70°C)		571	
T_A	Operating temperature range		–40	85	°C
T_{stg}	Storage temperature range		–65	150	°C
	Lead temperature (soldering, 10 s)			300	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum
(3) Voltages exceeding V_+ or GND on any signal terminal are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Electrical Characteristics for ±5-V Supply(1)

V_+ = 4.5 V to 5.5 V, V_- = –4.5 V to –5.5 V, T_A = –40°C to 85°C (unless otherwise noted)

PIN DESCRIPTION(1)

PIN NO.				NAME	DESCRIPTION
TS12A4516		TS12A4517			
D, P	SOT23-5	D, P	SOT23-5		
1	1	1	1	COM	Common
2, 3, 5	–	2, 3, 5	–	N.C.	No connect (not internally connected)
4	5	4	5	V_+	Positive power supply
6	4	6	4	IN	Digital control to connect COM to NO or NC
7	3	7	3	V_-	Negative power supply
8	2	–	–	NO	Normally open
–	–	8	2	NC	Normally closed

(1) NO, NC, and COM pins are identical and interchangeable. Any may be considered as an input or an output; signals pass in both directions.

APPLICATION INFORMATION

Power-Supply Considerations

The TS12A4516 and TS12A4517 operate with power-supply voltages from ±1 V to ±6 V [(2 V < (V_+ – V_-) < 12 V], but are tested and specified at ±5V, ±3.3V, and ±1.8V supplies. The pin-compatible TS12A4514 and TS12A4515 are recommended for use when only a single supply is desirable.

The TS12A4516 and TS12A4517 construction is typical of most CMOS analog switches, except that they have only two supply pins: V_+ and V_-. V_+ and V_- drive the internal CMOS switches and set their analog voltage limits. Reverse ESD-protection diodes are internally connected between each analog-signal pin and both V_+ and V_-. One of these diodes conducts if any analog signal exceeds V_+ or V_-.

Virtually all the analog leakage current comes from the ESD diodes to V_+ or V_-. Although the ESD diodes on a given signal pin are identical and, therefore, fairly well balanced, they are reverse biased differently. Each is biased by either V_+ or V_- and the analog signal. This means their leakages will vary as the signal varies. The difference in the two diode leakages to the V_+ and V_- pins constitutes the analog-signal-path leakage current. All analog leakage current flows between each pin and one of the supply terminals, not to the other switch terminal. This is why both sides of a given switch can show leakage currents of the same or opposite polarity.

V_+ and V_- also power the internal logic and logic-level translators. The logic-level translators convert the logic levels to switched V_+ and V_- signals to drive the analog signal gates.

Logic-Level Thresholds

Since these parts have no ground pin, the logic-level threshold is referenced to V_+. The threshold limits are V_+ –1.5 V and V_+ –3.5 V for V_+ levels between 6 V and 3 V. When V_+ = 2 V, the logic threshold is approximately 0.6 V.

CAUTION:

Do not connect the TS12A4516/TS12A4517 V_+ to 3 V and then connect the logic-level pins to logic-level signals that operate from 5-V supply. TTL levels can exceed 3 V and violate the absolute maximum ratings, damaging the part and/or external circuits.

Test Circuits/Timing Diagrams

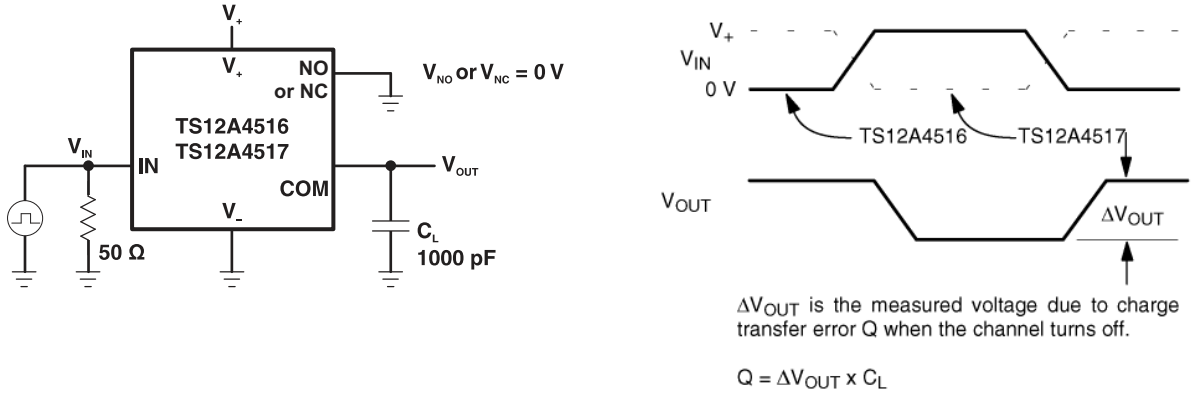

Figure 1. Charge Injection

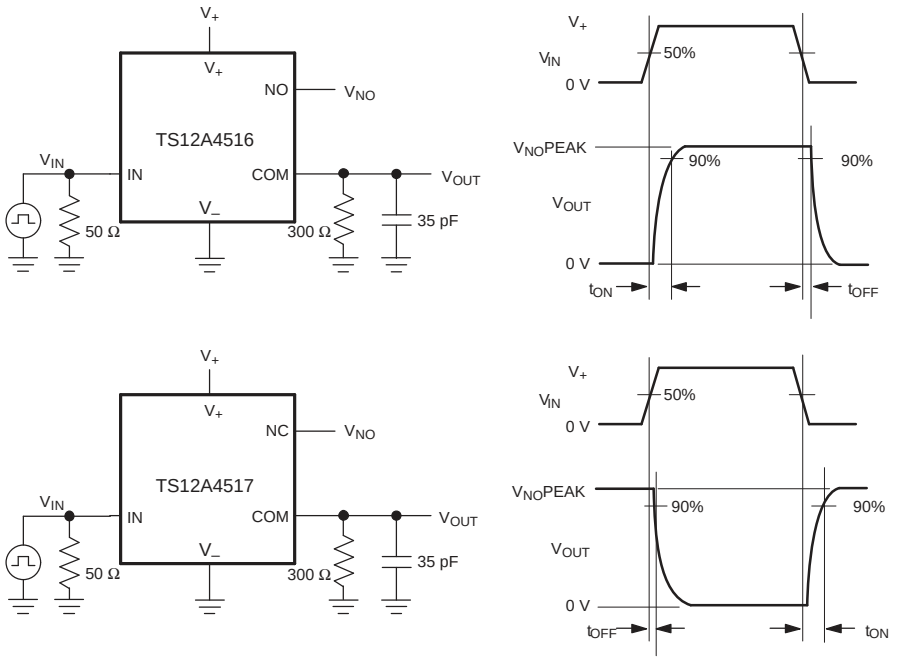

Figure 2. Switching Times

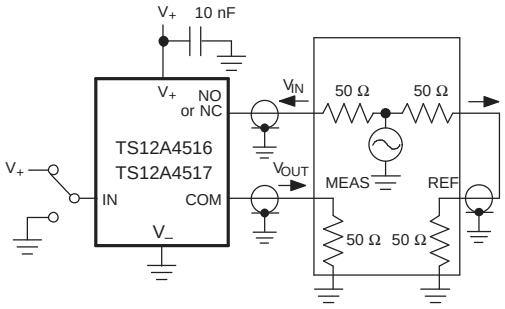

Measurements are standardized against short at socket terminals. OFF isolation is measured between COM and OFF terminals on each switch. ON loss is measured between COM and ON terminals on each switch. Signal direction through switch is reversed; worst values are recorded.

$$\text{OFF Isolation} = 20\log\frac{V_{OUT}}{V_{IN}}$$

$$\text{ON Loss} = 20\log\frac{V_{OUT}}{V_{IN}}$$

Figure 3. OFF Isolation and ON Loss

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

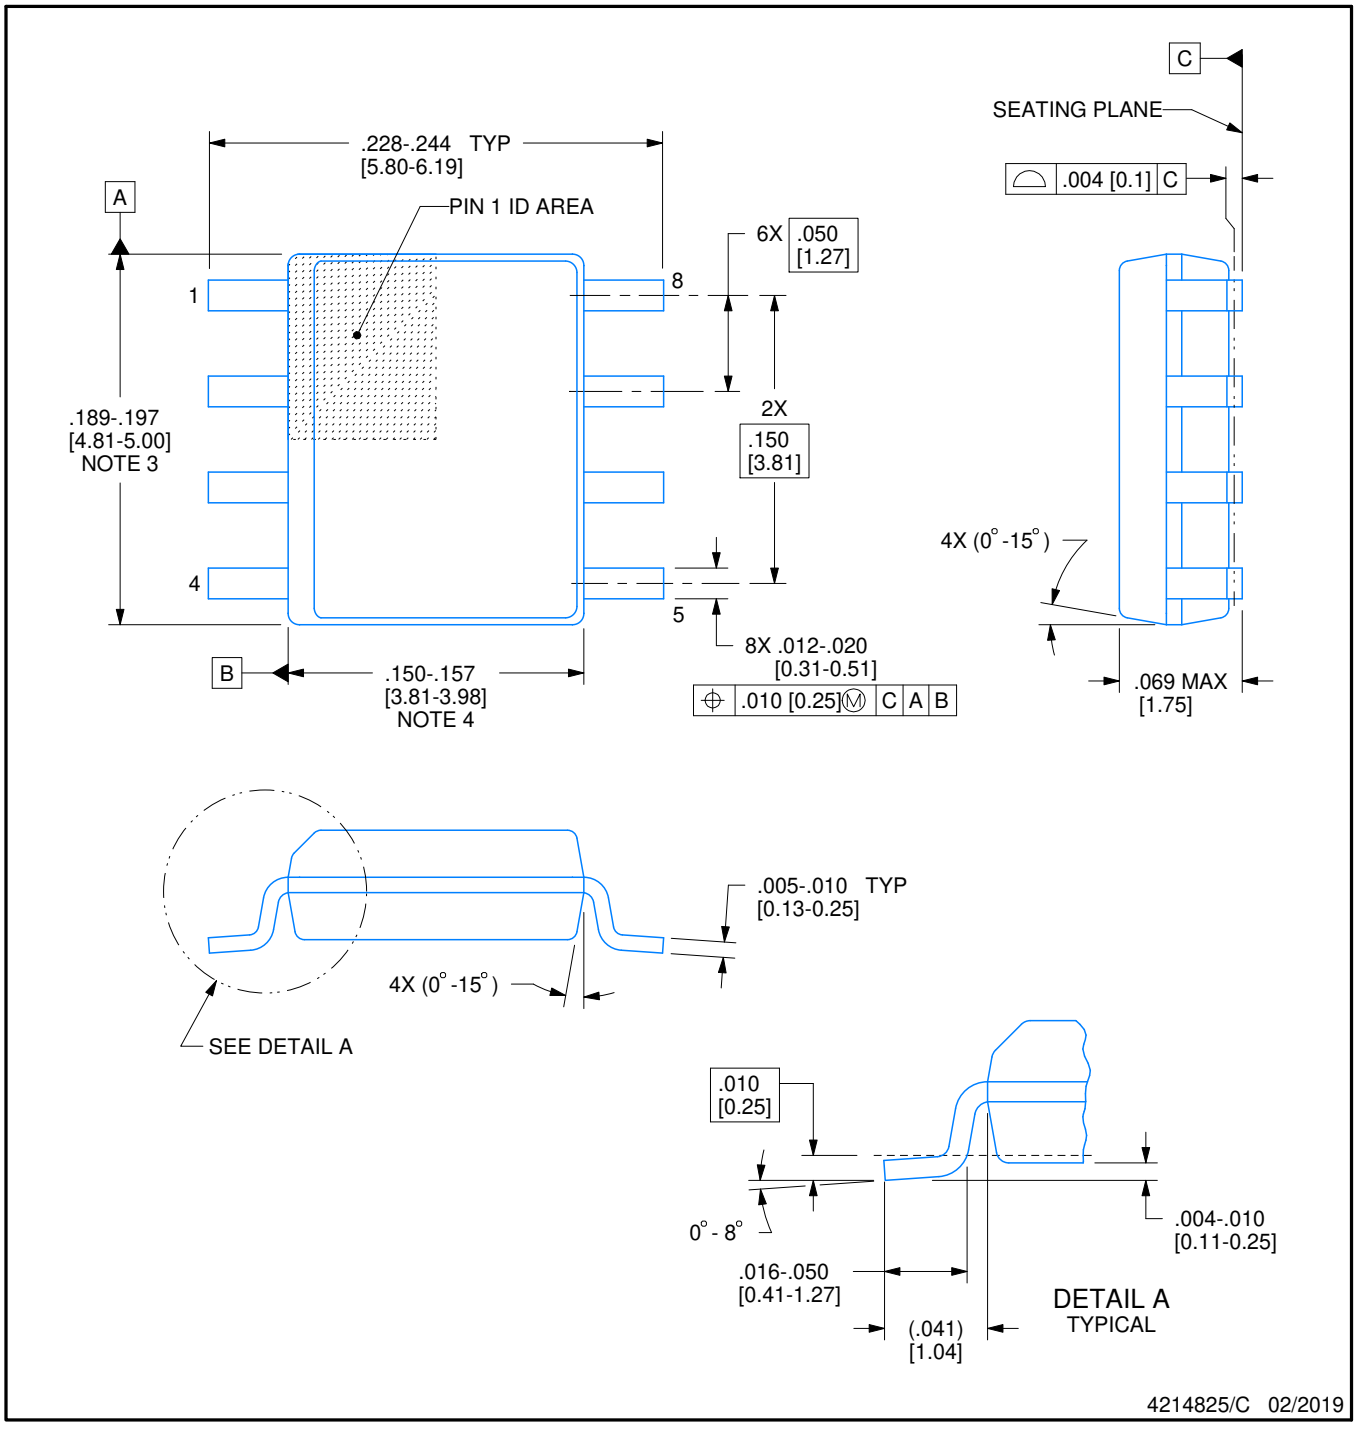
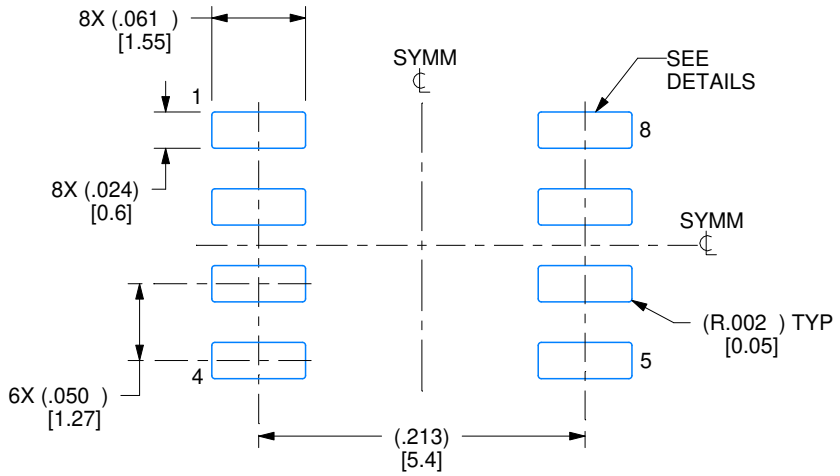
SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

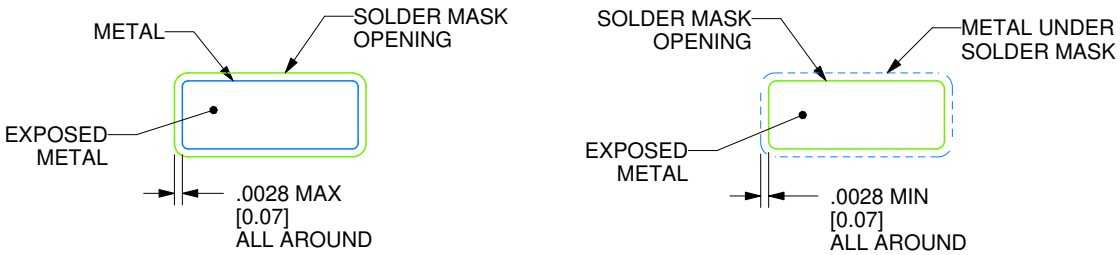


NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.



LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:8X



SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

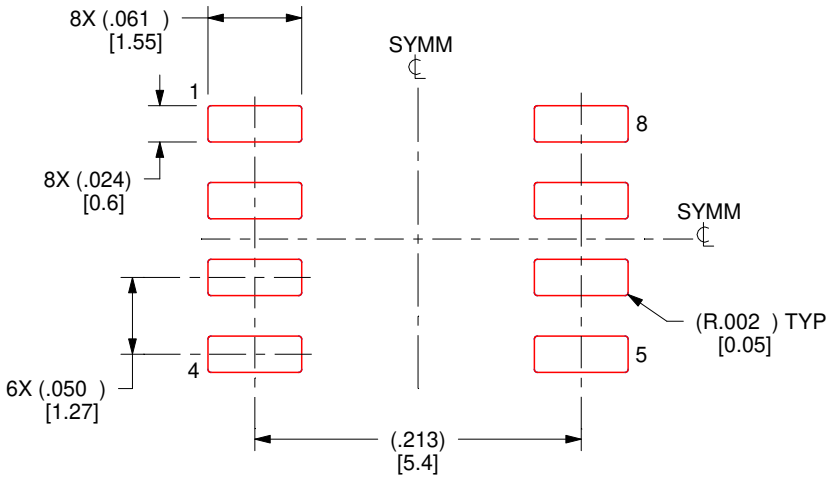
6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT



SOLDER PASTE EXAMPLE
BASED ON .005 INCH [0.125 MM] THICK STENCIL
SCALE:8X

4214825/C 02/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI’s products are provided subject to TI’s Terms of Sale or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI’s provision of these resources does not expand or otherwise alter TI’s applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
