

## **Power Relay K (Sealed)**

- Limiting continuous current 45A
- Wide voltage range

#### Typical applications

ABS control, blower fans, car alarm, cooling fan, engine control, fuel pump, hazard warning signal, heated front screen, heated rear screen, ignition, lamps front/rear/fog light, interior lights, main switch/supply relay, seat control, seatbelt pretensioner, sun roof, turn signal, valves, window lifter, wiper control.

- Measured on 70x70x1.5mm epoxy PCB FR4 with 35cm<sup>2</sup> (double layer 105µm) copper area. Cable cross section 6mm<sup>2</sup>. Boundary conditions: 180°C coil temperature; 130°C solder joint. Solder joint results above 130°C on request. The load circuit shall withstand current applied on 40A MAXI fuse.
- The values apply to a resistive or inductive load with suitable spark suppression and at maximum 13.5VDC load voltages.
- 3) For a load current duration of maximum 3s for a make/break ratio of 1:10.
- 4) See chapter Diagnostics of Relays in our Application Notes or consult the internet at http://relays.te.com/appnotes/
- 5) For unsuppressed relay coil. A low resistive suppression device in parallel to the relay coil increases the release time and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding.

## Max. DC load breaking capacity

Load limit curve 1: are extinguishes, during trains unle (changeover contact).

Load limit curve 2: safe shutdown, no stationary are (make contact).

Load limit curves measured with low inductive resistors verified for 1000 switching events.
