

SD100-41-21-231

Silicon Photodiode

The SD 100-42-21-231 is a 2.54mm diameter (5mm²) active area RED enhanced detector/ amplifier that combines a silicon photodiode with an op-amp without a feedback network, packaged in a hermetic TO-5 metal can package.

Applications

Instrumentation

Industrial

Medical

Features

Low Noise

Red Enhanced

High Speed

Custom Feedback

Absolute Maximum Ratings

Parameter	Symbol	Min	Typ	Max	Unit
Voltage Supplies	-	±5	±15	±18	V
Input Offset Voltage	-	-	1	2	mV
Input Voltage Noise@ f=10KHz	-	-	12	-	nV/√Hz
Input Bias Current	-	-	15	40	pA
Input Current Noise @ f=10KHz	-	-	20	30	fA/√Hz
Gain Bandwidth product	-	-	18	-	MHz
Supply Current	-	-	6.5	7	mA
Operating Temperature	T _{OP}	-65	-	+125	°C
Storage Temperature	T _{STG}	-40	-	-85	°C

Typical Electro-Optical Specifications at T_A=23 °C

Parameter	Test Conditions	Symbol	Min	Typ	Max	Unit
Dark Current	V _R =10V	I _D	-	-	10	nA
Shunt Resistance	V _R =0mV	R _{SH}	300	-	-	MΩ
Junction Capacitance	V _R =0V; f=1MHz	C _J	-	87	-	pF
	V _R =10V; f=1MHz	C _J	-	18	-	pF
Spectral Application Range	Spot Scan	λ	250	-	1100	nm
Reponsivity	λ=950nm, V _R =0V	R	-	0.64	-	A/W

*Response time of 10% to 90% is specified at 660nm wavelength light.

Photoconductive Mode

Note: Components shown outside the dashed area are external to the device, and must be supplied by the user.

Care and handling instructions

Your optoelectronic components are packaged and shipped in opaque, padded containers to avoid ambient light exposure and damage due to shock from dropping or jarring.

Care must be taken to avoid exposure to high ambient light levels, particularly from tungsten sources or sunlight.

- These components can be rendered inoperable if dropped or sharply jarred. The wire bonds are delicate and can become separated from the bonding pads when the component is dropped or otherwise receives a sharp physical blow.
- Most windows on photodiodes are either silicon or quartz. They should be cleaned with isopropyl alcohol and a soft (optical grade) pad.
- Photodiode exposure to extreme high or low storage temperatures can affect the subsequent performance. Maintain a non-condensing environment for optimum performance and lifetime.
- All devices are considered ESD sensitive. The photodiodes are shipped in ESD protective packaging. When unpacking and using these products, anti-ESD precautions should be observed.
- Photodiode packages and/or operation may be impaired if exposed to CHLOROETHENE, THINNER, ACETONE, TRICHLOROETHYLENE or any harsh chemicals.
- Optoelectronic components in plastic packages should be given special care. Clear plastic packages are more sensitive to environmental stress than those of black plastic. Storing devices in high humidity can present problems when soldering. Since the rapid heating during soldering stresses the wire bonds and can cause wire to bonding pad separation, it is recommended that devices in plastic packages to be baked for 24 hours at 85°C.
- The leads on the photodiode SHOULD NOT BE FORMED. If your application requires lead spacing modification, please contact Advanced Photonix Applications group at Techsupport@advancedphotonix.com before forming a product's leads. Product warranties could be voided.
- Most devices are provided with wire or pin leads for installation in circuit boards or sockets. Observe the soldering temperatures and conditions specified below:
 - Soldering Iron: Soldering 30 W or less
 - Temperature at tip of iron 300°C or lower.
 - Dip Soldering: Bath Temperature: 260±5°C.
 - Immersion Time: within 5 Sec.
 - Soldering Time: within 3 Sec.
 - Vapor Phase Soldering, Reflow Soldering: DO NOT USE
