¹⁾ If several protective fields are monitored simultaneously, the shut-off signals must be connected to safe outputs on a Flexi Soft safety controller or routed via a safe EFI gateway.

 $^{^{\}rm 2)}$ Two simultaneous field sets with two fields each, output to Flexi Soft via EFI.

 $^{^{\}rm 3)}$ Depending on basic response time and multiple sampling.

S3000 standard with restart interlock and external device monitoring at UE10-30S safety relay

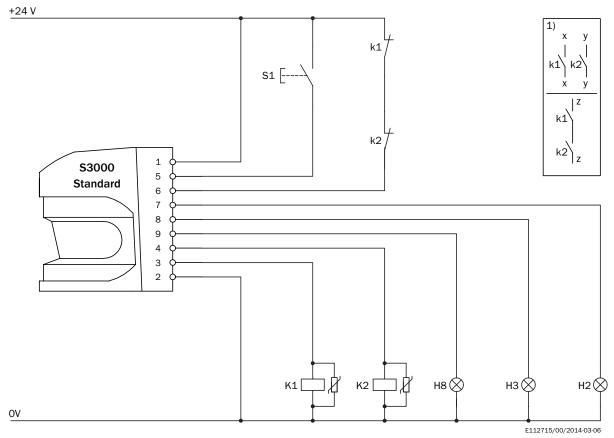

S3000 Standard in conjunction with UE10-30S

Operating mode: with restart interlock and external device monitoring (EDM)

Comments

¹⁾ Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel insertion in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
