### 1.1 Scope

This User Guide introduces the SAM9M10 Evaluation Kit (SAM9M10-EKES) and describes its development and debugging capabilities.

**Figure 1-1.** Board Photo

The Atmel® SAM9M10-EKES is a fully-featured evaluation platform for the Atmel SAM9M10-based microcontroller. The evaluation kit allows users to extensively evaluate, prototype and create application-specific designs.

The SAM9M10-EKES includes many hardware peripherals such as:

- Two high speed USB hosts and one high speed device port
- An Ethernet 10/100 interface
- Two high speed multimedia card interfaces
- An LCD TFT display (480\*RGB\*272) with touch pannel
- A composite video output

## Introduction

- A camera interface
- Several communication peripherals such as:
  - Universal Synchronous/Asynchronous Receiver Transmitter (USART)
  - Serial Synchronous Controller (SSC)
  - Two-Wire Interface (TWI)

The external memory block is made of 3 memory types:

- DDR2-SDRAM
- NAND Flash
- NOR Flash

---

## 1.2 Applicable Documents

**Table 1-1.** Applicable Documents

Reference	Title	Comments
6355A	SAM9M10 Preliminary Datasheet	This document describes the SAM9M10, which is part of the Atmel's Smart ARM® Microcontrollers. It is available from <a href="http://www.atmel.com/dyn/resources/prod_documents/doc6355.pdf">http://www.atmel.com/dyn/resources/prod_documents/doc6355.pdf</a>

### 2.1 Deliverables

The Atmel SAM9M10-EKES toolkit includes:

- Board
  - The SAM9M10-EKES board
- Power supply
  - Universal input AC/DC power supply with US, Europe and UK plug adapters
  - One 3V Lithium Battery type CR1225
- Cables
  - One micro A/B-type USB cable
  - One serial RS232 cable
- A Welcome Letter

**Figure 2-1.** Unpacked SAM9M10-EKES

Unpack and inspect this kit carefully. Contact your local Atmel distributor, should you have issues concerning the contents of the kit.

---

## 2.2 Evaluation Board Specifications

**Table 2-1.** SAM9M10-EKES Specifications

Characteristics	Specifications
Clock speed	400 MHz PCK, 133 MHz MCK
Ports	Ethernet, USB, RS232, DBGU
Board supply voltage	5 VDC from connector
Temperature - operating - storage	-10° to +50° C -40° to +85° C
Relative humidity	0 to 90% (non condensing)
Dimensions	180 mm x 160 mm
RoHS status	Compliant

---

## 2.3 Electrostatic Warning

The SAM9M10-EKES evaluation board is shipped in a protective anti-static package. The board must not be subjected to high electrostatic potentials. We strongly recommend using a grounding strap or similar ESD protective device when handling the board in hostile ESD environments (offices with synthetic carpet, for example...). Avoid touching the component pins or any other metallic element on the board.

#### 3.1 Power Up the Board

Unpack the board taking care to avoid electrostatic discharge. Unpack the power supply, select the right power plug adapter corresponding to that of your country, and insert it in the power supply.

Connect the power supply DC connector to the board and plug the power supply to an AC power plug.

The board LCD should light up and display a welcome page. Then, click or touch icons displayed on the screen and enjoy the demo.

---

#### 3.2 Battery

The SAM9M10-EKES ships with a 3V coin battery.

This battery is not required for the board to start up.

The coin battery is provided for user convenience in case the user would like to exercise the date and time backup function of the SAM9M10 series devices when the board is switched off.

---

#### 3.3 DevStart

The on-board NAND Flash contains a “SAM9M10-EKES DevStart”.

It is stored in the “SAM9M10-EKES DevStart” folder on the USB Flash disk available when the SAM9M10-EKES is connected to a host computer.

Click the file “welcome.html” in this folder to launch SAM9M10-EKES DevStart.

SAM9M10-EKES DevStart guides you through installation processes of IAR™ EWARM, Keil™ MDK and GNU toolkits. Then, it gives you step-by-step instructions on how to rebuild a single example project and how to program it into the SAM9M10-EKES. Optionally, if you have a SAM-ICE™, instructions are also given about how to debug the code.

**We recommend that you backup the “SAM9M10-EKES DevStart” folder on your computer before launching it.**

### 3.4 Recovery Procedure

The DevStart ends by giving step-by-step instructions on how to recover the SAM9M10-EKES to the state as it was when shipped by Atmel.

Follow the instructions if you deleted the contents of the embedded Flash or the NAND Flash and want to recover from this situation.

### 3.5 Sample Code and Technical Support

After boot up, you can run some sample code or your own application on the development kit. You can download sample code and get technical support from Atmel website [http://www.atmel.com/dyn/products/product\\_card.asp?part\\_id=4653](http://www.atmel.com/dyn/products/product_card.asp?part_id=4653)

**Figure 3-1.** Atmel Website for SAM9M10 Series

The screenshot shows the Atmel website for the SAM9M10 series. The page layout includes a top navigation bar with links for Products, Corporate, Investors, Quality, Media Support, Careers, and Contact Us. A search bar is located in the top right corner. The main banner features the Atmel logo and the text 'at91SAM One-stop Shop for ARM-powered Micros'. Below the banner, the breadcrumb trail reads 'Products > AT91SAM 32-bit ARM-based Microcontrollers > Product Card'. The left sidebar contains a list of navigation links: Home, Overview, SAM3U Series, SAM9G45, Devices, Tools & Software, Datasheets, Application Notes, Other Documents, FAQs - MCU, MCU Support Center, Third Party Support, Request Samples, and What's Changed. The main content area is titled 'AT91SAM9M10' and includes a description, a key parameters table, and a list of datasheets.

**AT91SAM9M10**

**Description:**

The AT91SAM9M10 is a multimedia-enabled high-performance ARM926-based embedded MPU running at 400MHz, combining user interfaces, video playback and connectivity. It includes a hardware video decoder, a 2D accelerator, LCD Controller, resistive touchscreen, camera interface, audio, Ethernet 10/100 and high-speed USB and SDIO. The SAM9M10 is targeted at media rich display and control panels in industrial application segments such as home and commercial buildings, POS (Point of Sale) terminals, entertainment systems, Internet appliances and medical.

**Key Parameters:**

	Status	Sampling
Video Decoder	1	
LCD Controller	1	
2D Accelerator	1	
Ethernet MAC 10/100	1	
Image Sensor Interface	1	
Pb-Free Packages	TFBGA 324

- AT91SAM9M10 Preliminary (1349 pages, revision A, updated 10/09)

### 4.1 Equipment on the Board

Figure 4-1. Board Architecture

#### 4.1.1 Interfaces

The board is equipped with a SAM9M10-CU chip (324-ball TFBGA package) together with the following interfaces or peripherals:

- DDR2/LPDDR memory interface is connected to 128 MB DDR2-SDRAM memory
- External Bus Interface (EBI) is connected to three kinds of memory devices (DDR2-SDRAM, NAND Flash and NOR Flash (not populated))

## Board Description

- One TWI serial memory
- One USB Host/Device multiplexed port interface
- One USB Host port interface
- One RS232 serial communication port
- One DBGU serial communication port
- One JTAG/ICE debug interface
- One Ethernet 100-base TX with three status LEDs
- One AC97 Audio DAC with headphone line out, line in and mono/stereo micro inputs
- One TV interface (composite video output)
- One 4.3" TFT LCD Module with touch screen and back light
- One ISI connector (camera interface)
- One Power red LED and two general-purpose green LEDs
- Two user input push buttons
- One joystick with 4-direction control and selector
- One Wakeup input push button
- One reset input push button
- One DataFlash®/SD/SDIO/MMC plus card slot (4/8 bit interface)
- One SD/SDIO/MMC card slot (4-bit interface)
- One Lithium Coin Cell Battery Retainer for 12 mm cell size (memory backup usage)

### 4.1.2 Board Interface Connection

- Ethernet using RJ45 connector (J15)
- USB Host, support USB host using a type A connector (J12)
- USB Host/Device, support USB host/device using a type micro AB connector (J14)
- UART1 (Rx, Tx, Rts, Cts) connected to a 9-way male D-type RS232 connector (J11)
- DBGU (Rx and Tx only) connected to a 9-way male D-type RS232 connector (J10)
- JTAG, 20 pin IDC connector (J13)
- SD/MMCplus connector (J5)
- SD/MMC connector (J6)
- Headphone (J7), line-in (J8) and microphone headset (J9)
- Speaker output (JP15)
- Image sensor connector (J17)
- TFT LCD display (J16), with TouchScreen (J19) and BackLigth (J21)
- Test points; various test points are located throughout the board
- Main power supply (J2)

### 4.1.3 Push Button Switches

- Reset, board reset (BP1)
- Wake up, push button to bring processor out of low power mode (BP2)
- Right and left click, user push button switches (BP4 and BP5)
- Joystick (BP3)

#### 4.1.4 Display LCD and LEDs

- Display, 480xRGBx272 pixels LCD module display connected to the PIO port E (LCD1)
- One surface-mounted power red LED, user interface (D8)
- Two surface-mounted green LEDs, user interface (D6 and D7)
- Three surface-mounted LEDs indicate Ethernet status (D9, D10, D11)

Figure 4-2. Board Layout Commented

The major components of the SAM9M10-EKES board are shown in Figure 4-1.

## 4.2 Hardware Layout and Configuration

### 4.2.1 Processor

The board features the Atmel SAM9M10-CU 324-ball TFBGA package. This chip runs at a nominal frequency of 400 MHz for the core and 133 MHz for the system bus.

For more information, refer to the last SAM9M10 datasheet available from <http://www.atmel.com/>

### 4.2.2 Clock Circuitry

The SAM9M10-EKES includes six clock sources:

## Board Description

- Two are alternatives for the SAM9M10 main clock,
- One crystal and one crystal oscillator are used for the Ethernet MII/RMII chip,
- One crystal is used for the AC97 codec chip, and
- One crystal or one crystal oscillator is used for the TV encoder.

**Table 4-1.** Main Components Associated with the Clock Systems

Quantity	Description	Component assignment
1	Crystal for Internal Clock, 12 MHz	Y1
1	Crystal for RTC Clock, 32.768 kHz	Y2
1	Oscillator for Ethernet Clock RMII, 50 MHz	Y4
1	Crystal for Ethernet Clock MII, 25 MHz	Y5
1	Crystal for AC91 Codec Clock, 24.576 MHz	Y3
1	Crystal for TV Encoder Clock, 13 MHz, or Oscillator for TV Encoder, 13 MHz	Y7 Y6

### 4.2.3 Reset Circuitry

The reset sources are:

- Power on reset
- Push button reset
- JTAG reset from an in-circuit emulator interface.

### 4.2.4 Memory

#### 4.2.4.1 External Memories

The SAM9M10 features a DDR2/LPDDR memory interface and an External Bus Interface (EBI) to permit interfacing to a wide range of external memories and to almost any kind of parallel peripheral.

The SAM9M10-EKES board is equipped with DDR2/LPDDR devices featuring 128 MB of DDR2-SDRAM memory (Micron MT47H64M8B6-3 16Meg\*8\*4).

The External Bus Interface (EBI) is connected to three kinds of memory devices:

- One Parallel Flash AT49SV322DT (not populated by default)
- Two DDR2-SDRAM MT47H64M8B6-3
- One NAND Flash MT29F2G16ABD (not populated by default) or MT29F2G08ABD (single footprint)

The chip select NCS0, NCS1 and CS3 are used for NOR Flash, DDR2-SDRAM and NAND Flash memories, respectively. Furthermore, a dedicated jumper can disconnect each of these NCS0, NCS1, and NCS3 signals, making them available for other functions.

Figure 4-3. EB10 - DDR2

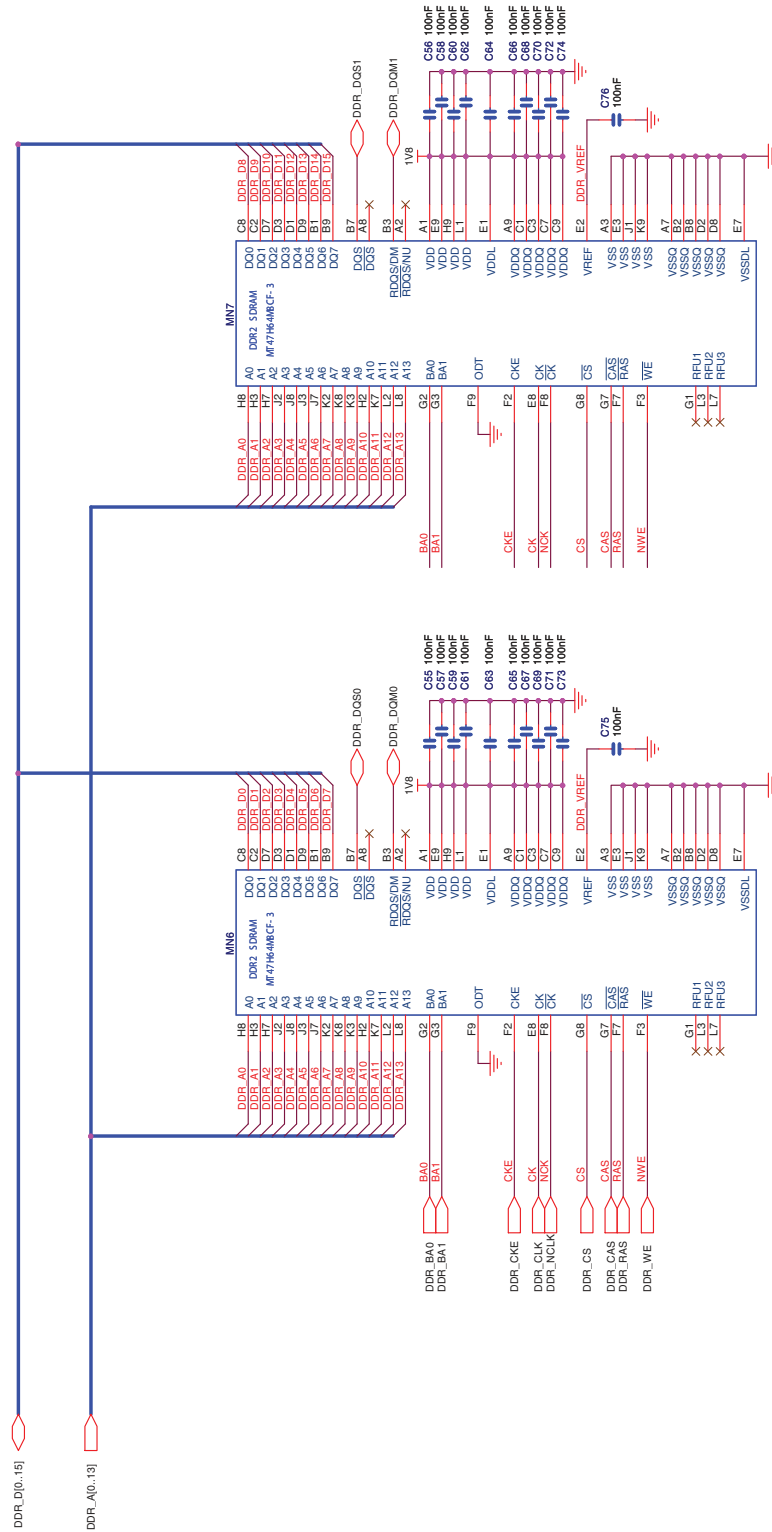

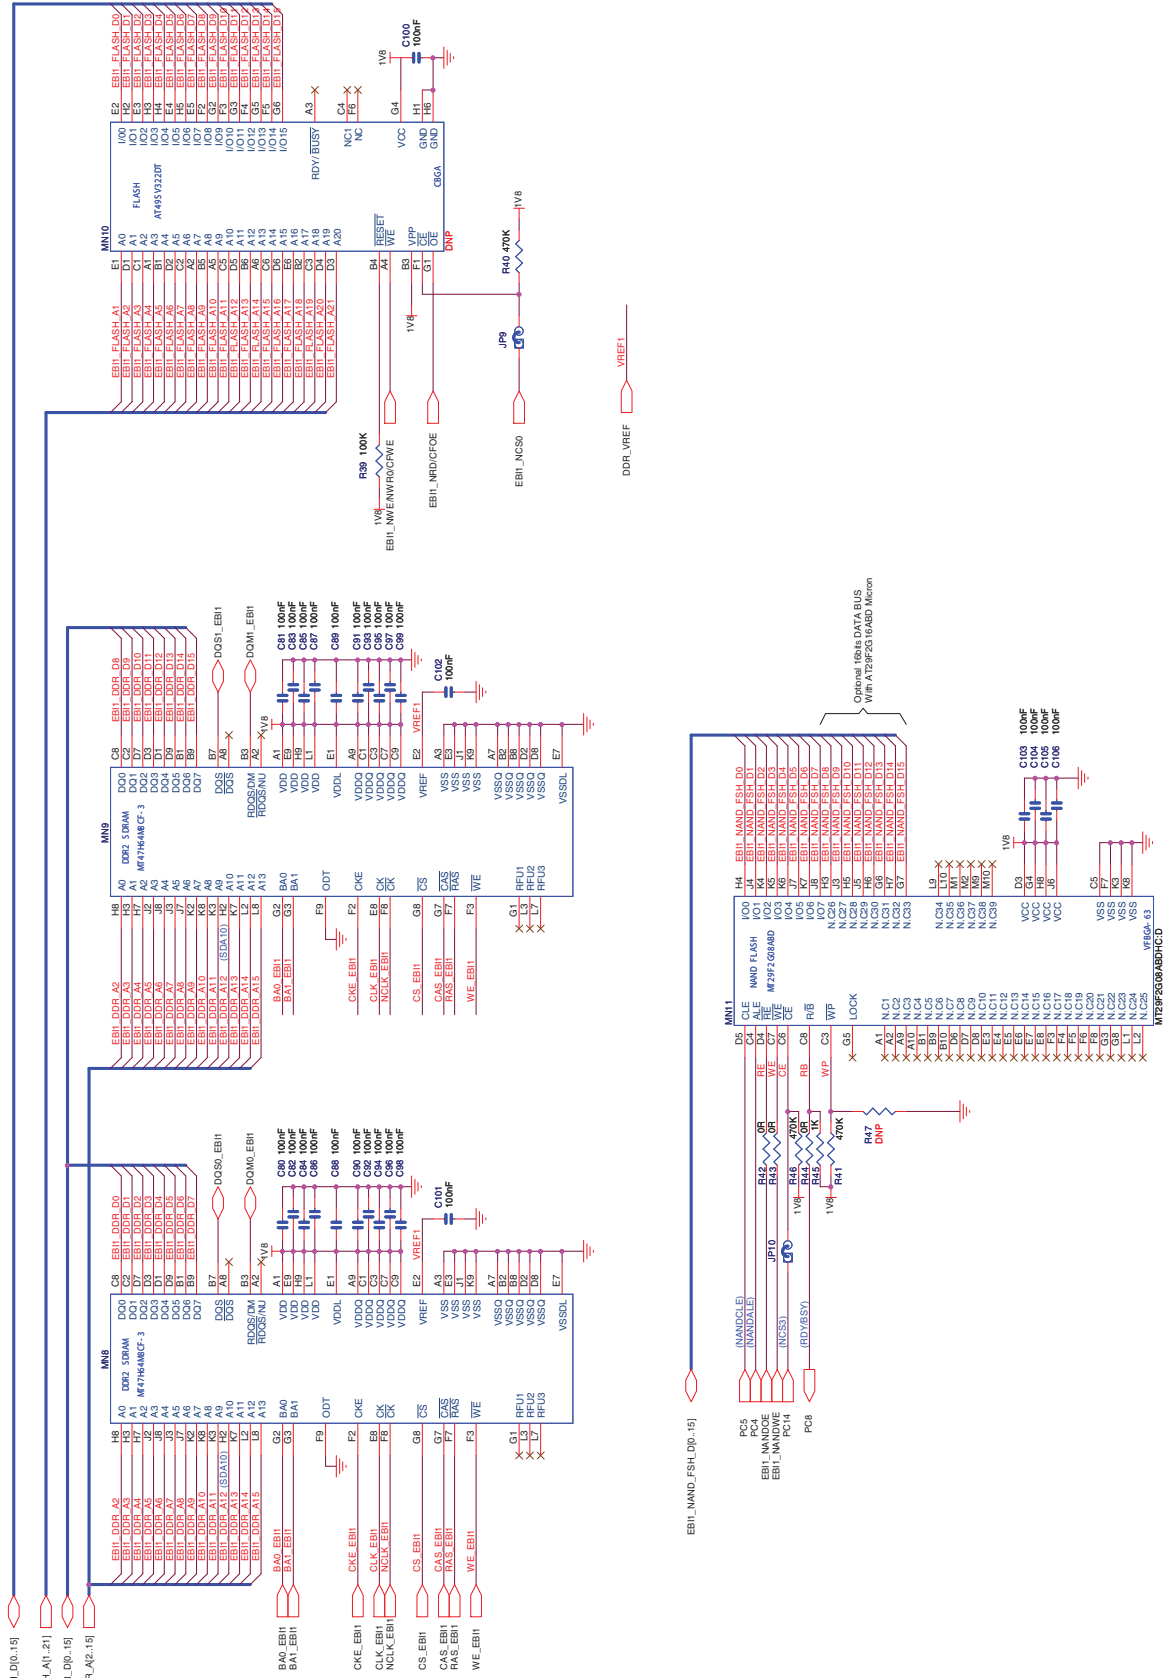

Figure 4-4. EB11 - DDR2 + Flash

## 4.2.5 Power Supplies

The SAM9M10 Board contains four regulated power supplies:

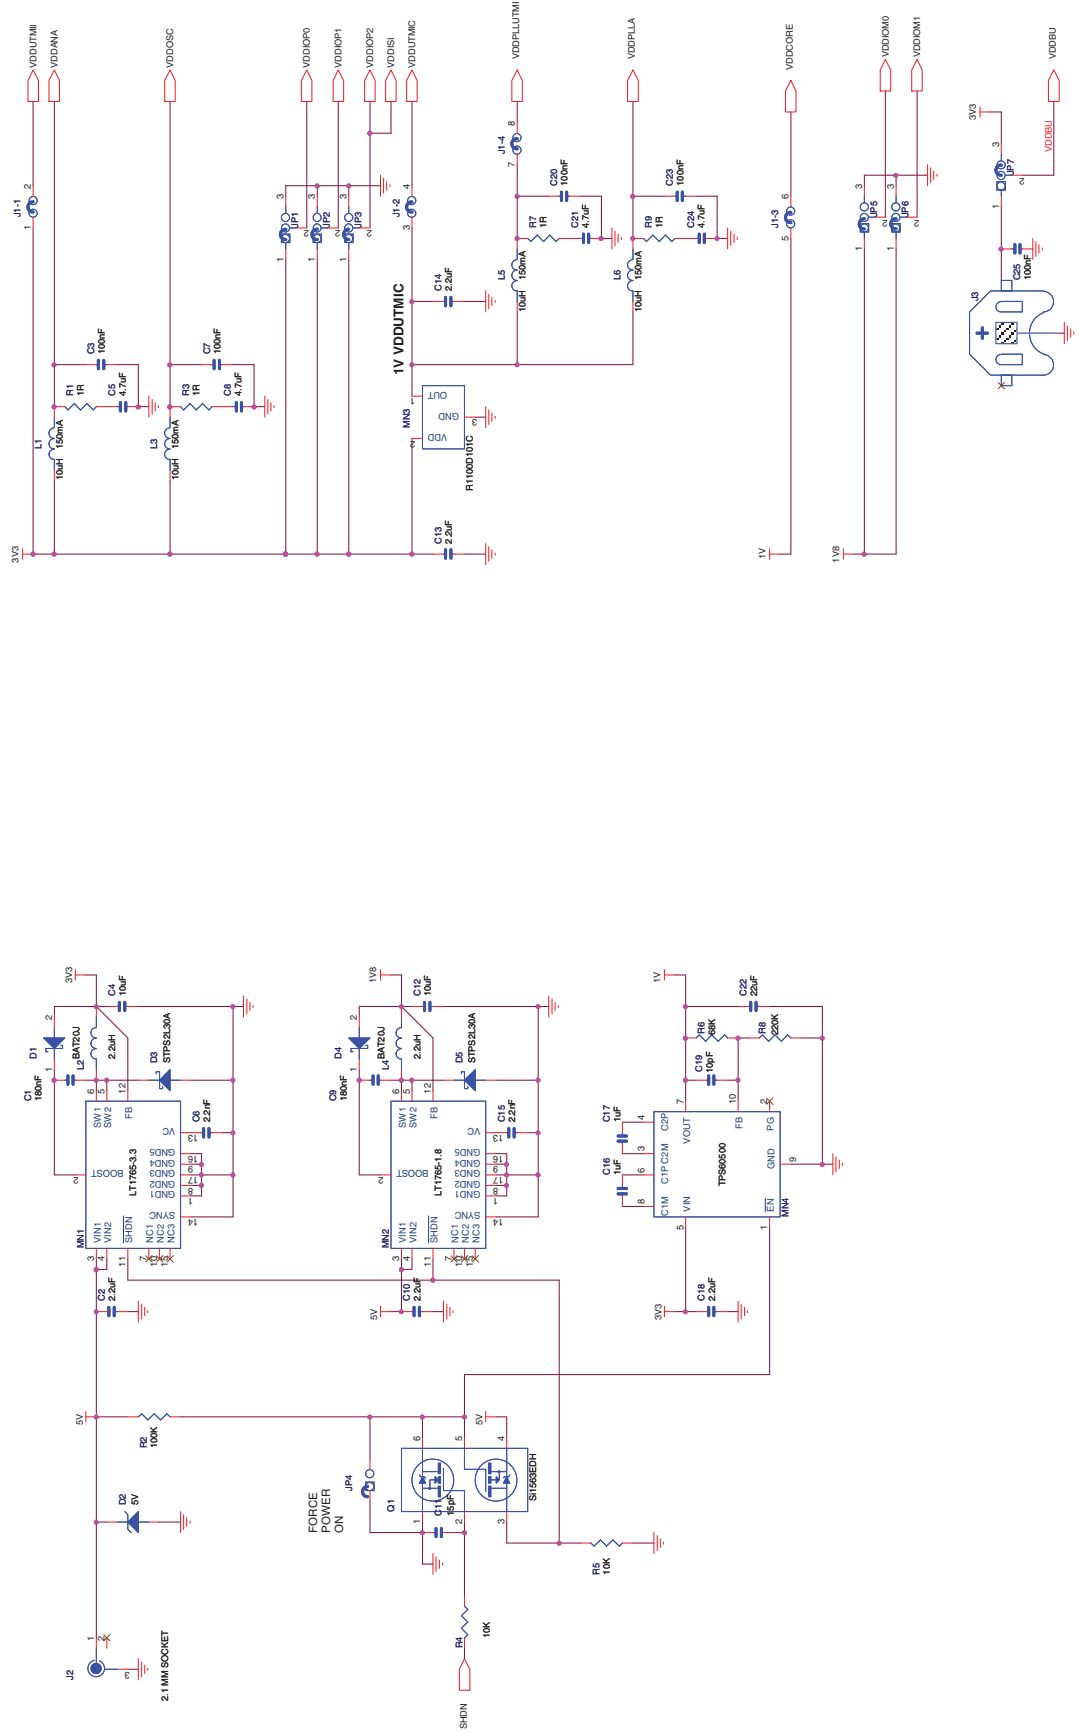

- 3.3 VDC Supply
- 1.8 VDC Supply
- 1.0 VDC Core Supply
- 1.0 VDC Core UTMI Supply, PLL

The outputs of these regulated power supplies<sup>1</sup> are distributed as necessary to each part of the circuit board.

- The 3.3 VDC Supply is generated by an LTC1765-3.3 chip. It accepts VIN 5 VCC power and outputs a regulated +3.3 V to most other circuits in the SAM9M10-VB.
- The 1.8 VDC Supply (VDDIOM0, VDDIOM1) is generated by an LT1765-1.8. It is powered by VIN 5 VCC power and outputs a regulated +1.8V.
- The 1.0 VDC Core Supply (VDDCORE) is generated by a TPS60500 IC. It is powered by the VIN 5 VCC power.
- The 1.0 VDC Core Supply (VDDUTMIC, VDDPLLUTMI and VDDPLLA) is generated by a CMOS voltage regulator R1100D series. It is powered by the output of the 3.3 VDC Supply.

**Note:** 1. Corresponding test points (TP1 to TP4, GND) are used with jumpers (JP1.1 to JP7) to permit probing of these voltages.

Figure 4-5. Power Supply and Management Power Block

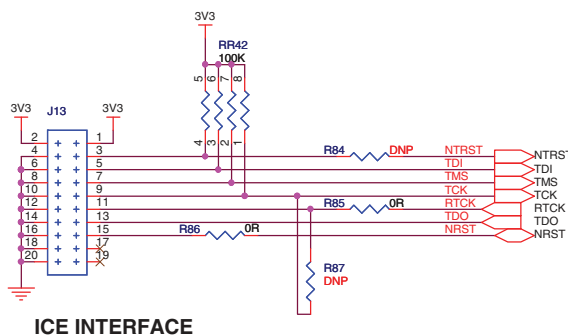

## 4.2.6 Debug Interface

### 4.2.6.1 JTAG/ICE

Software debug is accessed by a standard 20-pin JTAG connection. This allows connection to a standard USB-to-JTAG in-circuit emulator.

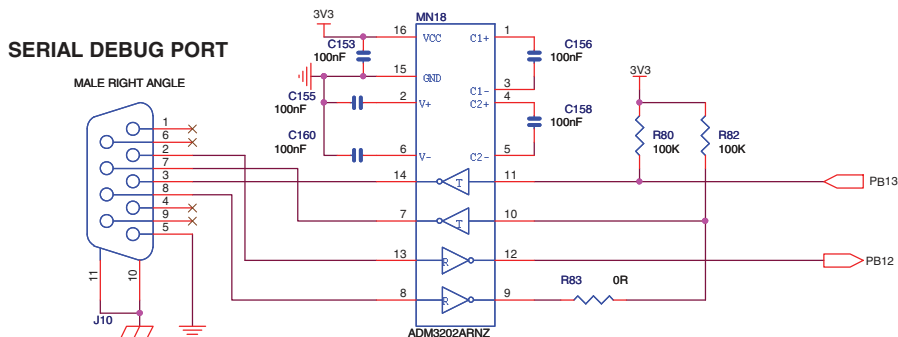

Figure 4-6. JTAG Interface

### 4.2.6.2 DBGU Com Port

This UART is connected to the DB-9 male socket through an RS-232 Transceiver (TXD and RXD only).

Figure 4-7. DBGU Com Port

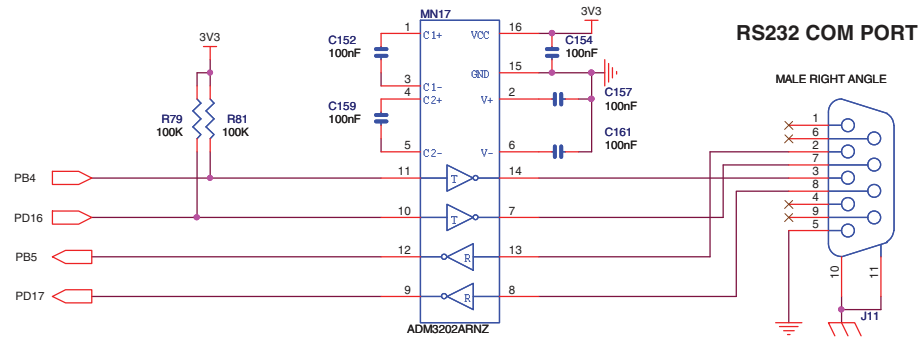

## Board Description

### 4.2.6.3 User Serial Com Port

The USART1 is used as a user serial com port. This USART1 is buffered with an RS-232 Transceiver (TXD, RXD and handshake CTS/RTS control) and connected to the DB-9 male socket. Software must assign the appropriate PIO pins (PB5 = RXD1, PB4 = TXD1, PD16 = RTS1, PD17 = CTS1) to enable the UART1 function.

**Figure 4-8.** User Serial Com Port

Refer to the SAM9M10 datasheet for more information about the SAM9M10 USARTs.

### 4.2.6.4 USB Port

The SAM9M10-EKES features USB communication ports:

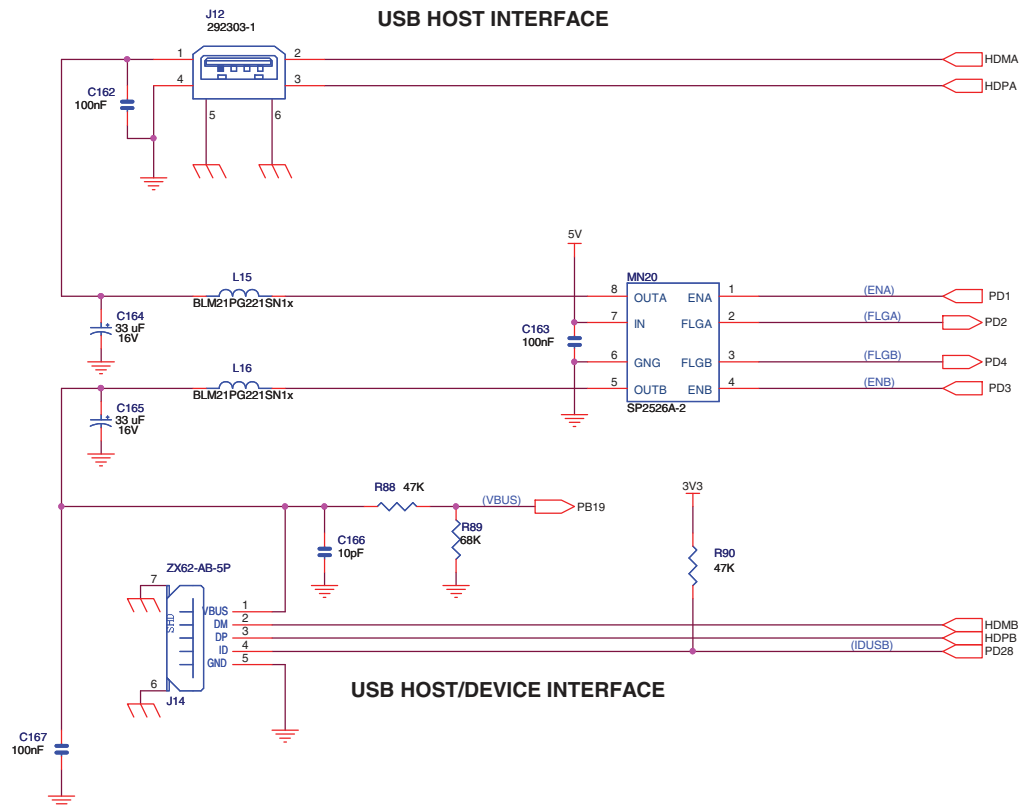

- Two Host Ports: Full speed OHCI and High speed EHCI
- One Device Port: High speed.

USB Host Port0 is directly connected to the first UTMI transceiver. The second Host Port (Port1) is multiplexed with the USB device High speed and connected to the second UTMI port.

- One USB high/full speed type standard A connector
- One USB interface Host/Device Micro AB connector

Refer to the SAM9M10 datasheet for detailed programming information.

Figure 4-9. USB Port

#### 4.2.6.5 Ethernet 10/100 (EMAC) Port

The port is compatible with IEEE® Standard 802.3.

The SAM9M10-EKES is equipped with a Davicom DM9161AEP 10/100 Mbps Fast Ethernet Physical Layer TX/FX Single Chip Transceiver. It contains the entire physical layer functions of 100BASE-TX as defined by IEEE 802.3u, including the Physical Coding Sublayer (PCS), Physical Medium attachment (PMA), Twisted Pair Physical Medium Dependent Sublayer (TP-PMD), 10BASE-TX Encoder/Decoder (ENC/DEC), and Twisted Pair Media Access Unit (TPMAU).

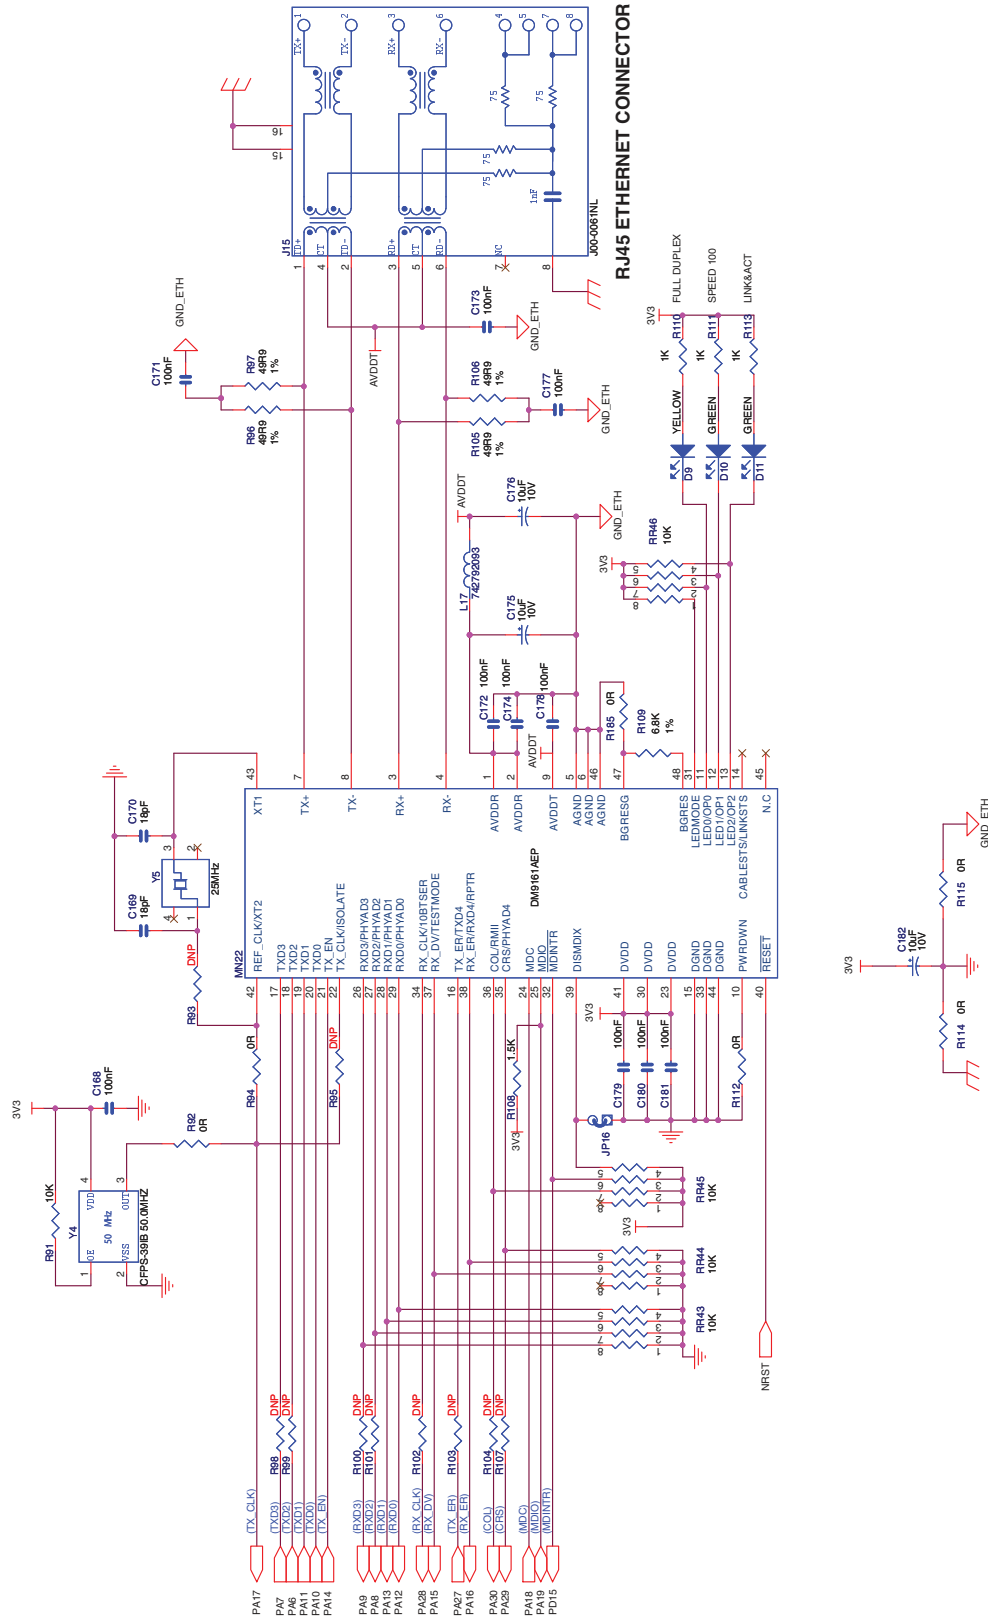

The Ethernet interface integrates an RJ45 connector with an embedded transformer, and three status LEDs.

The Ethernet interface provides two selectable modes, MII or RMII (Reduced MII), for 100Base-Tx or 10Base-Tx. The MII and RMII interfaces are capable of both 10Mb/s and 100Mb/s data rates as described in the IEEE 802.3u standard. The signals used by MII and RMII interfaces are described in the table below.

Table 4-2. Pin Mapping for Normal MII and Reduced MII

Pin Name	Normal MII Mode		Reduced MII Mode	
	SAM9M10	DM9161	SAM9M10	DM9161
ETX0-ETX1	ETX[0:1] transmit data	TXD [0:1]	ETX[0:1]	TXD [0:1]
ETX2-ETX3	ETX[2:3] transmit data	TXD [2:3]	NC	NC
ETXEN	ETXEN: transmit enable	TXEN	ETXEN: transmit enable	TXEN
ETXER	ETXER: transmit error	TXER/TXD[4]	NC	NC
ETXCK/REFCK	ETXCK: transmit clock	TXCLK	REFCK: reference clock	REF_CLK
ERX0-ERX1	ERX[0:1]: receive data	RXD [0:1]	ERX[0:1]: receive data	RXD [0:1]
ERX2-ERX3	ERX[2:3]: receive data	RXD [2:3]	NC	NC
ERXER	ERXER: receive error	RXER/RXD[4]/ RPTR/NODE	ERXER: receive error	RPTR/NODE
ERXDV	ERXDV: receive valid data	RXDV	ECRSDV: carrier sense / data valid	CRS DV
ERXCK	ERXCK: receive clock	RXCLK	NC	NC
ECOL	ECOL: collision detect	COL	NC	NC
ECRS	ECRS: carrier sense / data valid	CRS (PHYAD[2:4])	NC	NC
EMDC	EMDC: management data clock	MDC	EMDC: management data clock	MDC
EMDIO	EMDIO: management data input / output	MDIO	EMDIO: management data input / output	MDIO
NRST	NRST: microcontroller reset	RESET# XT1 (25 MHz)	NRST: microcontroller reset	RESET# XT1 (REF_CLK 50MHz)

Figure 4-10. Ethernet Port

For more information about the Ethernet controller device, refer to the Davicom DM9161 controller manufacturer's datasheet.

## **Board Description**

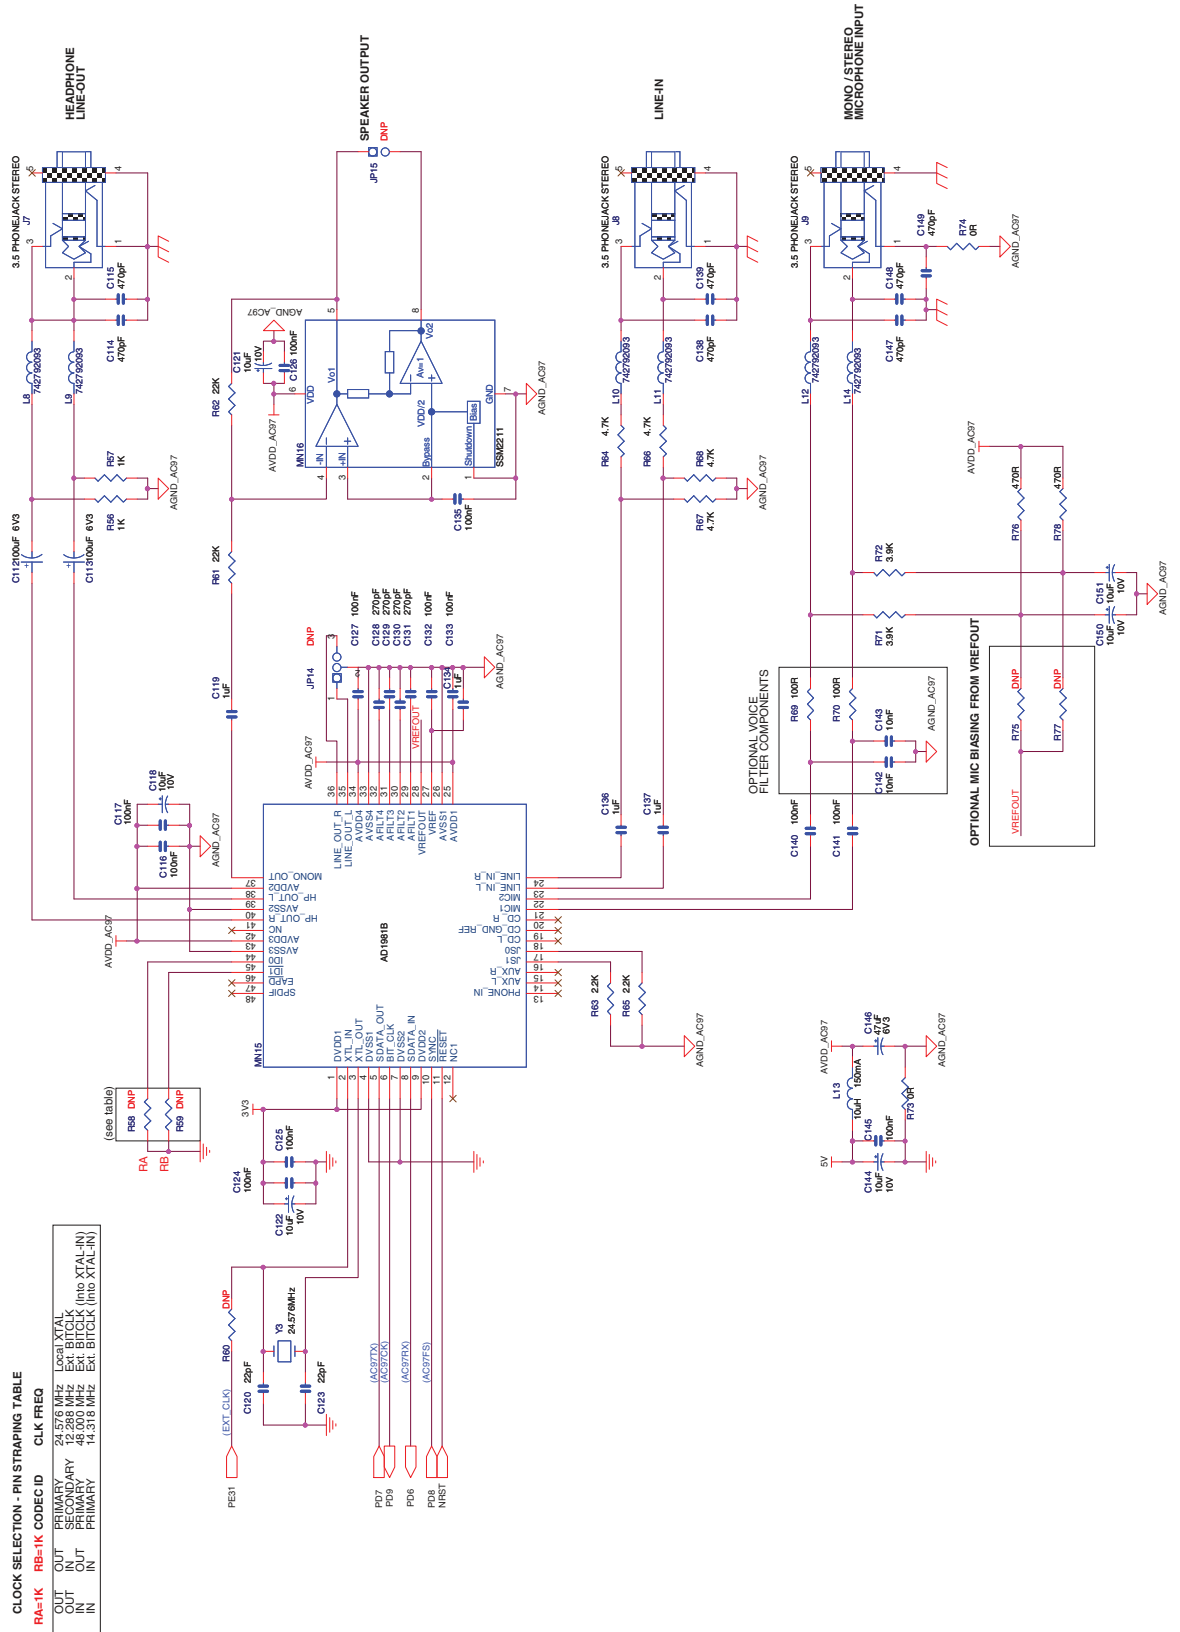

### **4.2.7 Audio Stereo Interface**

The SAM9M10-EKES includes an AD1981B AC97 SoundMAX® CODEC for digital sound input and output. This interface includes audio jacks for MIC input (J9), Line audio input (J8), Headphone line output (J7) and a 2-point speaker output connector (JP15).

It is compliant with AC97 Component Specification V2.2.

Figure 4-11. Audio Stereo Interface

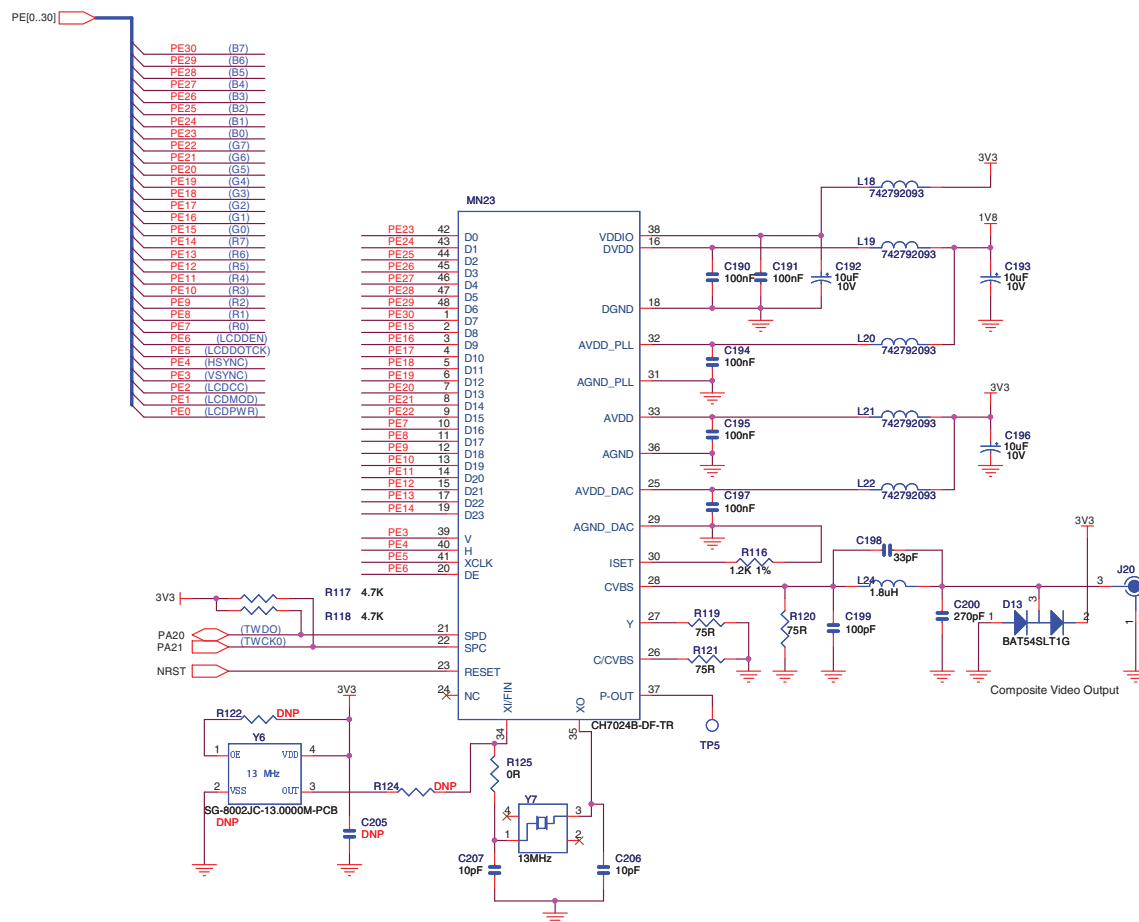

For more information about the AC97 codec device, refer to the Analog Devices AD1981B controller manufacturer's datasheet.

### 4.2.8 TV-Out Extension

The Chronitel CH7024 chip provides an interface between the SAM9M10 LCD Controller and a TV set by converting LCD signals to TV signals.

The CH7024 is a TV encoder device which encodes the video signals and generates synchronization signals for NTSC and PAL standards. Supported TV output formats are NTSC-M, NTSC-J, NTSC-433, PAL-B/D/G/A/I, PAL-M, PAL-N and PAL-60. The CH7024 provides video output support for CVBS or S-video.

Figure 4-12. TV-Out Extension Port

The frequency accuracy must be  $\pm 20$ ppm or higher.

### 4.2.9 Software Controlled LEDs

Three users LED are provided for general use. The LEDs are connected to PIO port lines, allowing their control through either GPIO or PWM control.

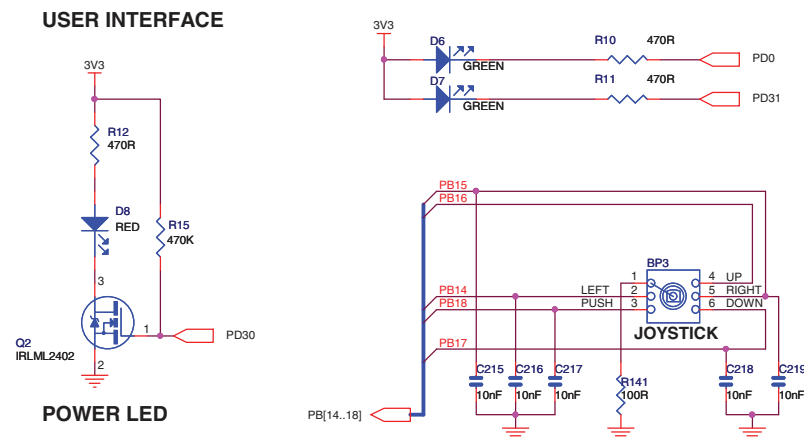

- LEDs D6 to D8 are software controlled by PIO pins.
- LEDs D9 to D11 indicate Ethernet traffic and link status. These are automatically managed by on-chip microcontroller hardware. See [Section 7.1 "Schematics"](#) .

**Table 4-3.** Discrete LEDs

LED	Description	Comment
D6	Green LED	User software controlled
D7	Green LED	User software controlled
D8	Red LED	User software controlled
D9	Yellow LED	Indicates transmission or reception via Ethernet
D10	Green LED	Indicates speed 100
D11	Green LED	Is lit when a good link test has been detected

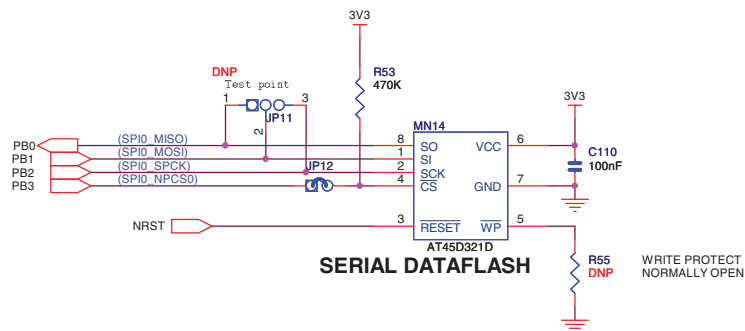

**Figure 4-13.** Software Controlled LEDs

#### 4.2.10 Serial Peripheral Interface Controller (SPI)

The SAM9M10 provides two high-speed Serial Peripheral Interface (SPI) controllers. One port is used to interface with the on-board serial EEPROM.

**Figure 4-14.** SPI

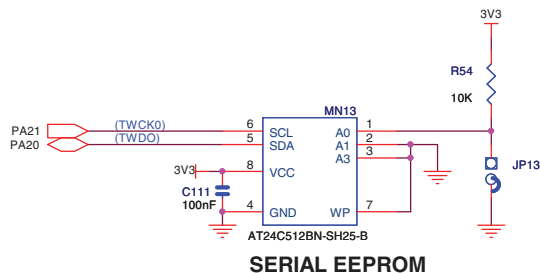

## Board Description

### 4.2.11 Two Wire Interface (TWI)

The SAM9M10 has a full speed (400 kHz) master/slave I2C Serial Controller. The controller is fully compatible with the industry standard I2C and SMBus Interfaces. This port is used to interface with the on-board Serial DataFlash, ISI and TV encoder interface.

**Figure 4-15.** TWI

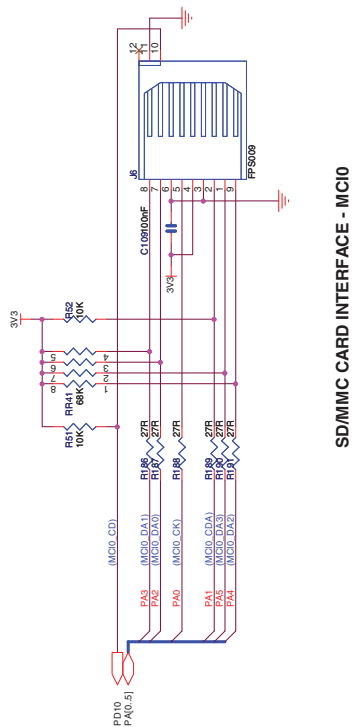

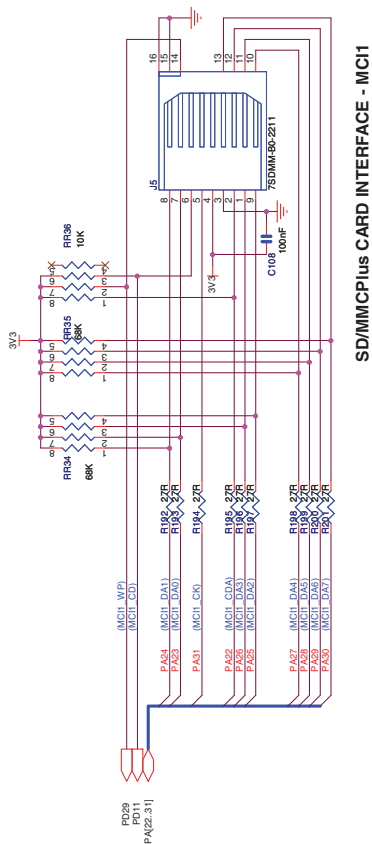

### 4.2.12 SD/MMC Interface

The SAM9M10-EKES has two high-speed 8-bit multimedia interfaces MMC/MMCPlus v4.1. The first interface is used as an 8-bit interface (MCI1), connected to a CE-ATA connector footprint and an 8-bit SD/MMC card slot. The second interface is used as a 4-bit interface (MCI0), connected to a 4-bit SD/MMC card slot.

The users must provide their own compatible cards for use with these connectors.

Please note that the power is connected to VCC, which is 3.3 volts.

Figure 4-16. SD/MMC0-MMC1

## **Board Description**

### **4.2.13 TFT LCD with Touch Panel**

The SAM9M10 features an LCD controller. A 4.3" 480x272 Portrait Mode LCD provides the SAM9M10-EKES with a low power LCD display, back light unit and a touch panel, similar to that used on commercial PDAs.

The TFT LCD component is an LG<sup>®</sup>/PHILIPS<sup>®</sup>, model number LB043WQ1.

Graphics and text can be displayed on the dot matrix panel with up to 16 million colors by supplying 24-bit data signals (8bitxRGB by default) or 16-bit data signals (5+6+5bitxRGB in option). This allows the user to develop graphical user interfaces for a wide variety of end applications.

Warning: never connect/disconnect the LCD display from the board while the power supply is on. Doing so may damage both units and is not covered by warranty.

The back light voltage is generated from a TPS61161 boost converter. It is powered directly by the VIN 5 VCC power (the control for the back light voltages is separated from the main board voltages due to the specific voltage requirements of the LCD panel).

Figure 4-17. TFT LCD

This Resistor is intentionally mounted in place of C210

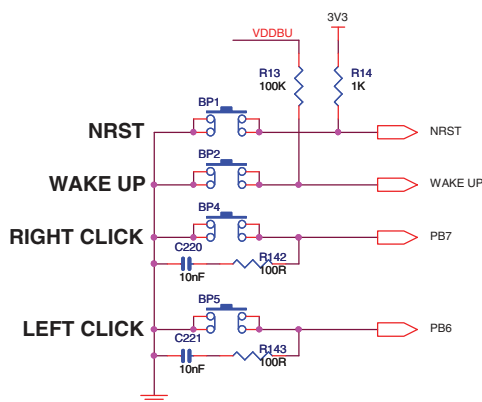

## Board Description

### 4.2.14 Push Buttons

The SAM9M10-EKES is equipped with two system push buttons, two user push buttons and one joystick. The push buttons consist of momentary push button switches mounted directly to the board. When any switch is depressed, a low (zero) appears at the associated input pin.

- System push buttons:
  - Reset, perform system reset
  - Wakeup, perform system wake up
- User push button:
  - Right click
  - Left click
- Joystick:
  - One touch, 5-way switching,
  - Normally open momentary contacts,
  - Push down to select in any position.

**Figure 4-18.** Push Buttons

### 4.2.15 Expansion Slot

- GPIO1 & GPIO2, LCD signals (PIO E) are routed to the connectors extension J23
- All I/Os of the SAM9M10 Image Sensor Interface are routed to connectors J17
- Touch screen signals and analog I/O are connected to J18

This allows the developer to extend the features of the board by adding external hardware components or boards.

Figure 4-19. Expansion Slot

CONNECTOR EXTENSION FOR LARGE LCD

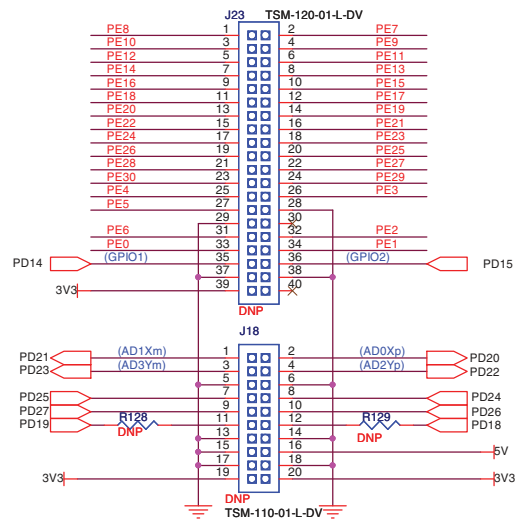

IMAGE SENSOR CONNECTOR

## Section 5

---

# Configuration

---

### 5.1 JTAG/ICE Configuration

**Table 5-1.** JTAG/ICE Configuration

Designation	Default Setting	Feature
R84	Not populated	Disables the ICE NTRST input
R85	Soldered	Enables the ICE RTCK return. R87 must be opened
R86	Soldered	Enables the ICE NRST input
R87	Not populated	Disables TCK <-> RTCK local loop

### 5.2 ETHERNET Configuration

RMII is the factory default mode.

To evaluate the MII mode, the user has to unsolder R92 and solder R93, R98 to R104, R107.

Two types of jumpers are used on the SAM9M10-EKES board:

- 2-pin jumpers with two possible settings:
  - Fitted: the circuit is closed, and
  - Not fitted: the circuit is open
- 3-pin jumpers with two possible positions, for which settings are presented in the following tables.

## 5.3 Jumpers Configuration

**Table 5-2.** Jumpers Configuration

Designation	Default Setting	Feature			
J1 (combined jumper array)	Closed	J1-1	1-2	VDDUTMII	3V3
	Closed	J1-2	3-4	VDDUTIMC	1V
	Closed	J1-3	5-6	VDDCORE	1V
	Closed	J1-4	7-8	VDDPLLUTMI	1V

JP16	Closed	DISMDIX (MN22)			

## 5.4 Miscellaneous Configuration Items

N.P = not populated

P = populated

**Table 5-3.** Miscellaneous Configuration

Designation	Default Setting	Feature
R20	N.P	JTAGSEL
R21	P	Connect TSADVREF to VDDANA (may be used for specific filtering)
R22	P	Connect GNDANA to GND (may be used for specific filtering)
R24	P	Force TST pin to GND (chip is set in non-test mode = normal operation mode)
R47	N.P	Write protect NAND Flash (mount a 0-ohm resistor to write-protect the NAND Flash device)
R55	N.P	Write protect serial Data Flash (mount a 0-ohm resistor to write-protect the serial Flash device)
R58, R59	N.P	Clock selection Audio AC97 (see mapping table in <a href="#">Section 7.1 "Schematics"</a> )
R60	N.P	External clock Audio AC97 (mount a 0-ohm resistor to connect it)
R75, R77	N.P	Change bias from VREFOUT (see <a href="#">Section 7.1 "Schematics"</a> )
R69, R70		Voice filter components
R84,R85 R86,R87		ICE interface reset and clocking schemes (see <a href="#">Section 5.1 "JTAG/ICE Configuration"</a> )
R92, R93, R94, R95, R98, R99 R100, R101 R102,R103 R104,R107 R112		Ethernet interface, MII mode (see <a href="#">Section 5.2 "ETHERNET Configuration"</a> )
Y6, R122, R124	N.P	External 13 MHz oscillator (option) for the on-board video composite encoder
TP1		GND Test point
TP2		GND Test point
TP3		GND Test point
TP4		GND Test point

## 5.5 PIO Configuration

### 5.5.1 Peripheral Signals Multiplexing on I/O Lines

The AT91SAMM10 product features 5 PIO controllers, PIOA, PIOB, PIOC, PIOD and PIOE, which multiplex the I/O lines of the peripheral set. Each PIO Controller controls up to 32 lines. Each line can be assigned to one of two peripheral functions, A or B. The multiplexing tables in the following paragraphs define how the I/O lines of peripherals A and B are multiplexed on the PIO Controllers.

## Configuration

### 5.5.2 Multiplexing on PIO Controller A (PIOA)

"R.Select" = connection selectable via an on-board resistor (default not populated)

**Table 5-4.** PIO Multiplexing Port A

I/O	Peripheral A	Peripheral B		Function and Comments	Power
PA0	MCI0_CK	TCLK3		MMCI0 Clock	VDDIOP0
PA1	MCI0_CDA	TIOA3		MMCI0 Command	VDDIOP0
PA2	MCI0_DA0	TIOB3		MMCI0 Data0	VDDIOP0
PA3	MCI0_DA1	TCKL4		MMCI0 Data1	VDDIOP0
PA4	MCI0_DA2	TIOA4		MMCI0 Data2	VDDIOP0

PE23	LCDD16	LCDD22		LCD-Blue0	VDDIOP1
PE24	LCDD17	LCDD23		LCD-Blue1	VDDIOP1
PE25	LCDD18			LCD-Blue2	VDDIOP1
PE26	LCDD19			LCD-Blue3	VDDIOP1
PE27	LCDD20			LCD-Blue4	VDDIOP1
PE28	LCDD21			LCD-Blue5	VDDIOP1
PE29	LCDD22			LCD-Blue6	VDDIOP1
PE30	LCDD23			LCD-Blue7	VDDIOP1
PE31	PWM2	PCK1		AC97 External Clock	VDDIOP1

### 6.1 Power Supply

The AT91SAMM10-EKES evaluation board can be powered from a DC 5V power supply via the external power supply jack (J2) shown in Figure 10 1. The positive pole must be on J2 center pin.

**Figure 6-1.** Power Supply Connector J2

**Table 6-1.** Power Supply Connector J2 Signal Description

Pin	Mnemonic	Signal description
1	Center	+5 VCC
2	Gnd	

### 6.2 RS232 Connector with RTS/CTS Handshake Support

Connector J11 is the COM1 connector.

**Figure 6-2.** RS232 COM1 Connector J11

**Table 6-2.** Serial COM1 Connector J11 Signal Descriptions

Pin	Mnemonic	Signal description
1, 4, 6, 9	NC	NO CONNECTION
2	TXD TRANSMITTED DATA	RS232 serial data output signal
3	RXD RECEIVED DATA	RS232 serial data input signal
5	GND	GROUND
7	RTS READY TO SEND	Active-positive RS232 input signal
8	CTS CLEAR TO SEND	Active-positive RS232 output signal

### 6.3 DBGU

Connector J10 is the DBGU connector.

**Figure 6-3.** RS232 DBGU Connector J10**Table 6-3.** RS232 DBGU Connector J10 Signal Descriptions

Pin	Mnemonic	Signal description
1, 4, 6, 7, 8, 9	NC	NO CONNECTION
2	TXD TRANSMITTED DATA	RS232 serial data output signal
3	RXD RECEIVED DATA	RS232 serial data input signal
5	GND	GROUND

## 6.4 Ethernet

Connector J15 is the RJ-45 Ethernet Connector.

**Figure 6-4.** Ethernet RJ45 Connector J15

**Table 6-4.** Ethernet RJ45 Connector J15 Signal Descriptions

Pin	Mnemonic	Pin	Mnemonic
1	TxData+ DIFFERENTIAL OUTPUT PLUS	2	Txdata- DIFFERENTIAL OUTPUT MINUS
3	RxData+ DIFFERENTIAL INPUT PLUS	4	Shield
5	Shield	6	RxData- DIFFERENTIAL INPUT MINUS
7	Shield	8	Shield

## 6.5 USB Host

Connector J12 is the USB Host connector.

**Figure 6-5.** USB Host type A connector J12

**Table 6-5.** USB Host Type A Connector J12 Signal Descriptions

Pin	Mnemonic	Signal description
1	Vbus	5v power
2	DM	Data minus
3	DP	Data plus
4	Gnd	Ground
5	Shield	Shield

## 6.6 USB Host/Device

Connector J14 is the USB Host/Device connector.

**Figure 6-6.** USB Host/Device Micro AB connector J14

**Table 6-6.** USB Host/Device MicroAB Connector J14 Signal Descriptions

Pin	Mnemonic	Signal description
1	Vbus	5v power
2	DM	Data minus
3	DP	Data plus
4	ID	On the Go Identification
5	Gnd	Ground

## 6.7 JTAG Debugging Connector

Connector J13 is the JTAG/ICE connector.

A SAM-ICE connector is a 20-way Insulation Displacement Connector (IDC) keyed box header (2.54 mm male) that mates with IDC sockets mounted on a ribbon cable.

**Figure 6-7.** JTAG/ICE Connector J13

**Table 6-7.** JTAG/ICE Connector J13 Signal Descriptions

Pin	Mnemonic	Description
1	VTref. 3.3V power	This is the target reference voltage. It is used to check if the target has power, to create the logic-level reference for the input comparators, and to control the output logic levels to the target. It is normally fed from VDD on the target board and must not have a series resistor.
2	Vsupply. 3.3V power	This pin is not connected in SAM-ICE. It is reserved for compatibility with other equipment. Connect to VDD or leave open in target system.
3	nTRST TARGET RESET - Active-low output signal that resets the target	JTAG Reset. Output from SAM-ICE to the Reset signal on the target JTAG port. Typically connected to nTRST on the target CPU. This pin is normally pulled HIGH on the target to avoid unintentional resets when there is no connection.
4	GND	Common ground
5	TDI TEST DATA INPUT - Serial data output line, sampled on the rising edge of the TCK signal.	JTAG data input of target CPU. It is recommended that this pin is pulled to a defined state on the target board. Typically connected to TDI on target CPU.
6	GND	Common ground
7	TMS TEST MODE SELECT	JTAG mode set input of target CPU. This pin should be pulled up on the target. Typically connected to TMS on target CPU. Output signal that sequences the target's JTAG state machine, sampled on the rising edge of the TCK signal.
8	GND	Common ground
9	TCK TEST CLOCK - Output timing signal, for synchronizing test logic and control register access.	JTAG clock signal to target CPU. It is recommended that this pin is pulled to a defined state on the target board. Typically connected to TCK on target CPU.
10	GND	Common ground
11	RTCK - Input Return test clock signal from the target.	Some targets must synchronize the JTAG inputs to internal clocks. To assist in meeting this requirement, a returned and retimed TCK can be used to dynamically control the TCK rate. SAM-ICE supports adaptive clocking which waits for TCK changes to be echoed correctly before making further changes. Connect to RTCK if available, otherwise to GND
12	GND	Common ground
13	TDO JTAG TEST DATA OUTPUT - Serial data input from the target.	JTAG data output from target CPU. Typically connected to TDO on target CPU.
14	GND	Common ground
15	nSRST RESET	Active-low reset signal. Target CPU reset signal
16	GND	Common ground
17	RFU	This pin is not connected in SAM-ICE.
18	GND	Common ground
19	RFU	This pin is not connected in SAM-ICE
20	GND	Common ground

## 6.8 SD/MMC- MCI0

Connector J6 is the SD/MMC connector.

**Figure 6-8.** SD/MMC0 Connector J6

**Table 6-8.** SD/MMC0 Connector J6 Signal Descriptions

Pin	Mnemonic	Pin	Mnemonic
1	RSV/DAT3	2	CDA
3	GND	4	VCC
5	CLK	6	GND
7	DAT0	8	DAT1
9	DAT2	10	Card Detect
11	GND	12	

## 6.9 SD/MMC- MCI1

Connector J5 is the SD/MMC connector.

**Figure 6-9.** SD/MMC1 Connector J5

**Table 6-9.** SD/MMC1 Connector J5 Signal Descriptions

Pin	Mnemonic	Pin	Mnemonic
1	RSV/DAT3	2	CMD
3	GND	4	VCC
5	CLK	6	
7	DAT0	8	DAT1
9	DAT2	10	DAT3
11	DAT4	12	DAT5
13	DAT6	14	DAT7

## 6.10 AC97

- Connector J7 is the Headphone connector.
- Connector J8 is the Line In connector.
- Connector J9 is the Line In connector.
- Connector JP15 is the Speaker Output connector

**Figure 6-10.** Audio Connector J7, J8, J9

**Table 6-10.** J7, J8, J9 Signal Description

Pin	Mnemonic
Central pin	Signal

**Table 6-11.** Speaker JP15 Signal Descriptions

Pin	Mnemonic
1	Speaker bridge output A
2	Speaker bridge output B

## 6.11 Image Sensor - ISI

Connector J17 is the ISI connector.

**Figure 6-11.** ISI Connector J17**Table 6-12.** ISI Connector J17 Signal Descriptions

Pin	Mnemonic	Pin	Mnemonic
1	VCC 3v3	2	Gnd
3	VCC 3v3	4	Gnd
5	Ctrl1	6	Ctrl2
7	SCL	8	SDA
9	Gnd	10	ISI_MCK
11	Gnd	12	ISI_VSYNC
13	Gnd	14	ISI_HSYNC
15	Gnd	16	ISI_PCK
17	Gnd	18	ISI_Data0
19	ISI_Data1	20	ISI_Data2
21	ISI_Data3	22	ISI_Data4
23	ISI_Data5	24	ISI_Data6
25	ISI_Data7	26	ISI_Data8
27	ISI_Data9	28	ISI_Data10
29	ISI_Data11	30	Gnd

## 6.12 Video

Connector J20 is the Video connector

**Figure 6-12.** Video Connector J20

**Table 6-13.** Video Connector J20 Signal Description

Pin	Mnemonic	Signal description
1	Center	Composite video signal output

## 6.13 Display Devices

### 6.13.1 LG TFT LCD LG/PHILIPS

Connector J24 is the TFT-LCD connector.

**Figure 6-13.** TFT LCD Connector J24

**Table 6-14.** LG TFT LCD Connector J24 Signal Descriptions

Pin	Mnemonic	Pin	Mnemonic
1	GND	2	GND
3	VDD 3V3	4	VDD 3V3
5	R0	6	R1
7	R2	8	R3
9	R4	10	R5

# Schematics

---

### 7.1 Schematics

This section contains the following schematics:

- Top Level view, block architecture of the design
- Power Supply
- SAM Processor
- Bus impedance adaptor
- Main memory
- EBI memory
- MCI & TWI
- Audio AC97
- Serial interfaces
- Ethernet
- LCD
- Video interfaces and LCD extension
