1 Introduction

Viking's 2.5 inch SSD presents outstanding performance with instant responsiveness to the host system, by applying the Peripheral Component Interconnect Express (PCIe) 3.0 interface standard, as well as highly efficient Non-Volatile Memory Express (NVMe) Protocol.

The Viking's 2.5 inch SSD delivers wide bandwidth of up to 2000 MB/s for sequential read speed and up to 1200 MB/s for sequential write speed under 7W of power. With the help of Toggle 2.0 NAND Flash interface, the Viking's 2.5 inch SSD delivers random performance of up to 430K IOPS for random 4KB read and up to 40K IOPS for random 128KB write in the sustained state.

By combining the enhanced reliability of NAND Flash memory silicon with NAND Flash management technologies, the Viking's 2.5 inch SSD delivers the extended endurance suitable for enterprise applications, in 2.5 inch form factor.

In addition, the Viking's 2.5 inch SSD supports Power Loss Protection that can guarantee that data issued by the host system are written to the storage media without any loss in the event of sudden power off or sudden power failure. Inrush current handler can protect the internal components from the electrical and physical damages.

2.5 Electrical Characteristics

2.5.1 Absolute Maximum Ratings

Values shown are stress ratings only. Functional operation outside normal operating values is not implied. Extended exposure to absolute maximum ratings may affect reliability.

2.5.2 Supply Voltage

The operating voltage is 12V

Table 2-4: Operating Voltage

Description	Min	Max	Unit
Operating Voltage for 12 V (+/- 8%)	- 8%	+ 8%	V

2.5.3 Power Consumption

All onboard power requirements of the SSD are derived from the PCIe 12V rail.

Table 2-5: Typical Power Consumption at 12V

Capacity	Active Read (max RMS)	Active Write (max RMS)	Idle (typ.)
3200GB	7.3 W	7.0 W	2.5 W
1920GB	6.8 W	6.4 W	2.5 W
960GB	6.7 W	6.3 W	2.5 W

Notes:

1. Power consumption was measured in the 12V power pins of the connector plug in SSD. The active and idle power is defined as the highest averaged power value, which is the maximum RMS average value over 100 ms duration.
2. The measurement condition for active power is assumed for 100% sequential read and write.
3. The idle state is defined as the state that the host system can issue any commands into SSD at any time.

Table 2-6: Temperature and Altitude Related Specifications

Conditions	Operating	Shipping	Storage
Commercial Temperature- Case ¹	0 to 70°C	-40 to 85°C	-40 to 85°C
Humidity (non-condensing)	-	95% under 65C, 500hrs	95% under 65C

Notes:

1. Tc is measured at the surface of NAND Flash package

2.6.2 Shock and Vibration

SSD products are tested in accordance with environmental specification for shock and vibration

Table 2-7: Shock and Vibration Specifications

Stimulus	Description
Shock(non-operating)	1500G (0.5ms duration x,y,z with 1/2 sine wave)

2.6.3 Electromagnetic Immunity

2.5 inch is an embedded product for host systems and is designed not to impair with system functionality or hinder system EMI/FCC compliance.

2.7 Reliability

Table 2-8: Reliability Specifications

Parameter	Description		
Uncorrectable Bit Error Rate	1 sector per 10 ¹⁷ bits read		
MTBF	2,000,000 hours		
Read Endurance	Unlimited		
Write Endurance	960GB	1924GB	3840GB
	1366 TBW	2733 TBW	5466 TBW
Drive Write per day	1.3 DWPD over 3 years		
Data retention	> 90 days at NAND expiration		

Notes:

1. The reliability specification follows JEDEC standards JESD218A and JESD219A
2. TBW=(GB capacity x DWPD x 365 x years)/1000

2.8 Data Security

2.8.1 Power Loss Protection

By using internal back-up power technology, the Viking SSD supports power loss protection feature to guarantee the reliability of data requested by the host system. When power is unpredictably lost, the SSD can detect automatically this abnormal situation and transfer all user data and meta-data cached in DRAM into the Flash media during any SSD operations.

2.8.2 Sudden Power Off and Recovery

If power interruption is detected, the SSD dumps all cached user data and meta data to NAND Flash. The SSD could protect even the user data in DRAM from sudden power off while SSD is used with cache on. Commonly, data is protected all of the operation period.

2.8.2.1 Time to Ready Sequence

In normal power-off recovery status, the SSD needs less than 11 seconds to reach operating mode where SSD works perfectly with cache-on state. SSD is ready to respond identify Device command during FTL OPEN. When the sudden power-off occurs, the user data in DRAM will be dumped into the NAND Flash using the stored power in the capacitor. In sudden power-off recovery condition, mapping data will be loaded or the FTL meta data be rebuilt perfectly for initial max. 30 seconds in case of 960GB. During this period, Identify Device command is still supported. This is called Sudden Power Off and Recovery.
