

Pi Supply

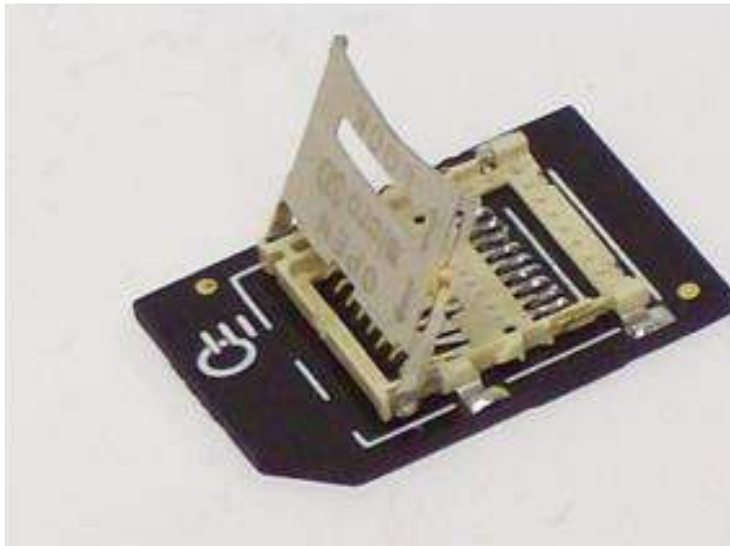

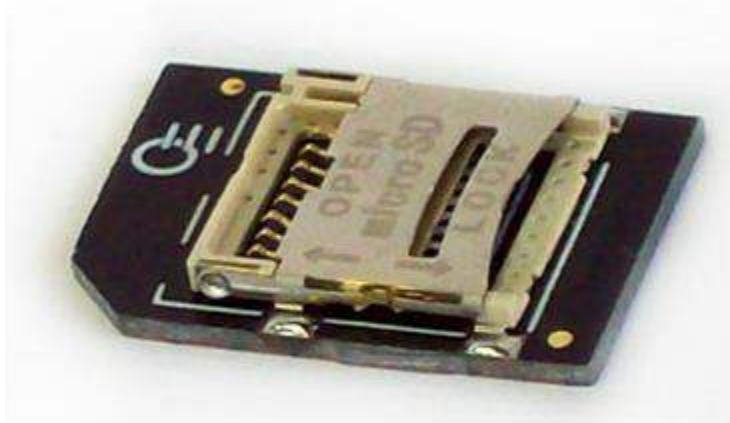

Raspberry Pi Low Profile Micro SD Card Adapter

The Raspberry Pi microSD Card Adapter can be used to convert a microSD card for direct use with your Raspberry Pi, without the use of a bulky full size SD card adapter like the ones usually supplied by the manufacturer. These adapters are tiny and sit completely flush with the edge of the Raspberry Pi, so there's no risk of knocking your SD card out (or having it stolen!). These adapters are specifically designed for the Raspberry Pi, and feature a latching type holder that requires two deliberate movements (in two dimensions) before the card pops out, making it super secure.

Features:

- Slim-line design - It's tiny!
- Sits completely flush with the edge of the Raspberry Pi
- Low profile - sits just 1.3mm higher than a standard SD card
- Gold ENIG Contacts
- Black Soldermask with White Silkscreen Lettering
- Latching type holder, for maximum security
- Fits perfectly in many of our Raspberry Pi Cases
- Designed for Raspberry Pi
- Vibration resistant
- Dimensions: 16.4 mm x 24.0 mm x 3.3 mm
- Does not include a memory card
