This switch is designed to give the switch level accuracy of a vertical switch, but without the need to mount the switch in the top of the tank. This can also avoid the need for a long vertical top mounted switch, as this switch can be mounted at the required level in the side of the tank.

The switch is configured to give a normally open switch action (with no liquid present) when the switch is positioned as shown in the dimensioned sketch below. The switch action can be reversed by rotating the mounting shaft by 180° .

Features

- Switch operates at level of mounting centreline
- 50 VA switching capacity
- 316 Stainless steel material
- Horizontal mounting and vertical float movement gives accurate level detection without needing a top mounting switch.
- Suitable for use at up to 10 bar pressure
