

3.3 Volt Populated Single Voltage Regulated Power SchmartModule

3.3 Volt Populated Single Voltage Regulated Power Module

3.3V Power Single Voltage Regulated Module: This is a highly stable linear-low-drop voltage regulator. With 12V DC input, output is 3.3V and provide up to 800mA of output peak current. For Negative Voltage: Reverse Output and Ground.

The amperage rating on these modules are based on the component manufacturer's published specifications. Real-world experience, based on our internal tests will vary from these specifications. The amperage is meant to be a peak not sustained amperage. For successful use at a sustained amperage you will want to draw no more than 50-60% of the published peak rating. Heat sinking the regulator may help increase these numbers. Should you see these numbers exceeded, the voltage will drop.
