

ABSTRACT

This user's guide describes the characteristics, operation, and use of the TPS65218 evaluation module (EVM). The TPS65218EVM is a fully assembled platform for evaluating the performance of the TPS65218 power management device. This document includes schematic diagrams, a printed-circuit-board (PCB) layout, and bill of materials (BOM).

Trademarks

Cortex® is a registered trademark of ARM.
All trademarks are the property of their respective owners.

1 Introduction

The TPS65218 is a highly-integrated power management solution for ARM Cortex® Microprocessors. Features of the TPS65218 include:

- 2 battery backup supplies
- 3 Buck converters
- 1 Buck-Boost converter
- USB load switch
- General purpose LDO
- Low-voltage load switch
- High-voltage load switch

2 Requirements

2.1 Software

The EVM will power-up and operate without use of software. A GUI is supplied to provide a simple way to communicate to the device via I²C. The GUI can be downloaded from [IPG-UI EVM GUI](#).

2.2 Host Computer

A computer with an available USB port is required to make use of the EVM software. The EVM software runs on the computer and communicates with the EVM via the USB2ANY interface.

2.3 Power Supply

A DC power supply capable of delivering up to 5 V and 3 A, and a coin cell battery or separate 3-V power supply for the backup supplies.

3 EVM Kit

The EVM kit (Figure 3-1) contains the following items:

- TPS65218 evaluation board
- USB2ANY adapter
- USB to USB micro cable
- 10-pin ribbon cable
- 30-pin ribbon cable

The 30-pin ribbon cable is not required for the TPS65218EVM.

Figure 3-1. TPS65218 EVM Kit

4 Schematic

Figure 4-1 illustrates the schematic for this EVM.

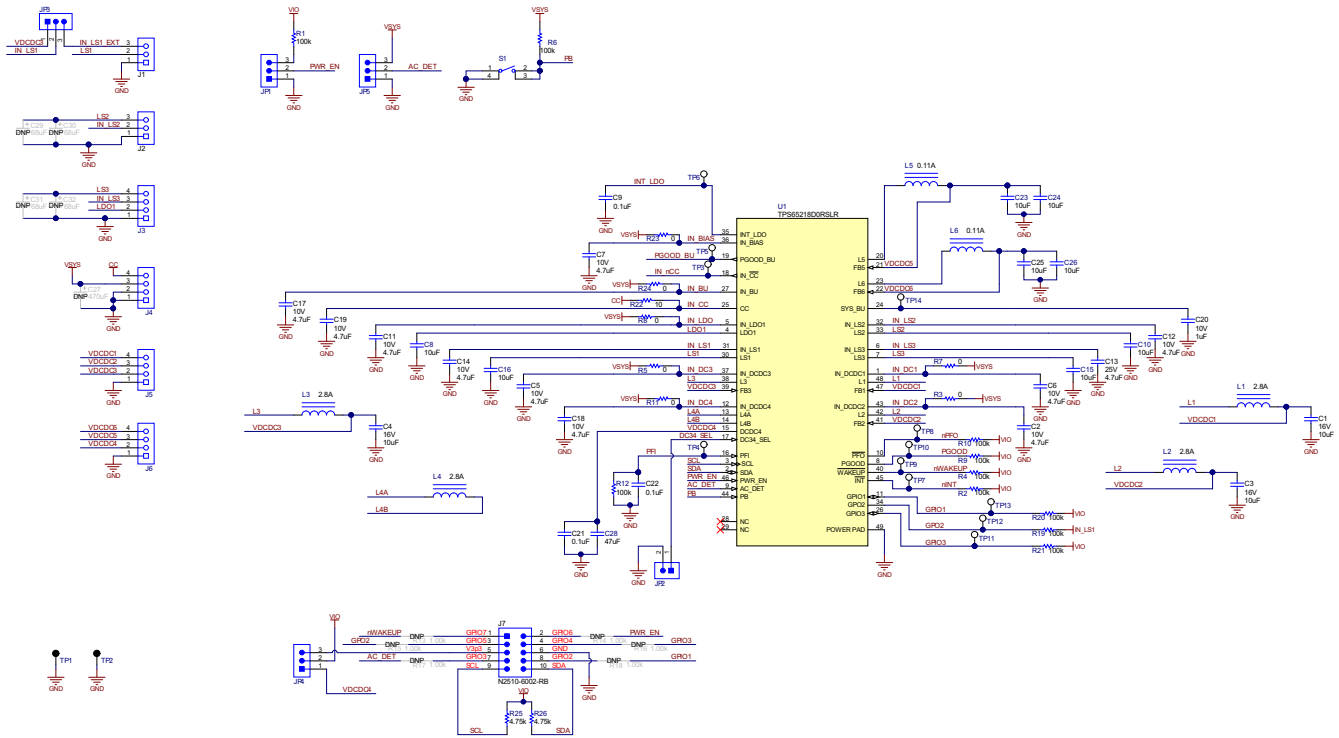

Figure 4-1. TPS65218 EVM Schematic

5 Terminal Block, Test Point, and Jumper Descriptions

Table 5-1. Terminal Block Descriptions

Connector	Pin	Description	Note
J1	GND	Ground	—
	LS1	LS1 Output	—
	EXT	External supply to LS1	Power Input (1.2 V – 3.3 V)
J2	GND	Ground	—
	IN_LS2	LS2 Input	Power Input (3.0 V – 5.5 V)
	LS2	LS2 Output	—
J3	GND	Ground	—
	LDO1	LDO1 Output	Default 1.8 V
	IN_LS3	LS3 Input	Power Input (1.8 V – 9.9 V)
J4	LS3	LS3 Output	—
	GND	Ground	—
	GND	Ground	—
J5	VSYS	DC Input	Power Input (2.7 V – 5.5 V)
	CC	Coin Cell Battery Input	Power Input (2.2 V – 3.3 V)
	GND	Ground	—
	DC3	Buck 3 Output (DCDC3)	Default 1.2 V Output
J6	DC2	Buck 2 Output (DCDC2)	Default 1.1 V Output
	DC1	Buck 1 Output (DCDC1)	Default 1.1 V Output
	GND	Ground	—
	DC4	Buck-Boost Output (DCDC4)	Default 3.3 V Output
J7	DC5	Battery Backup Supply Output (DCDC5)	1.0 V Output
	DC6	Battery Backup Supply Output (DCDC6)	1.8 V Output
	10-pin EVM connector for USB2ANY cable (I ² C communication)		

Table 5-2. Test Point Descriptions⁽¹⁾

Test Point	Description
GND	Ground
INT_LDO	Internal bias voltage
nWAKEUP	Wakeup output signal
nINT	Interrupt output
nPFO	Power-fail comparator output
GPO2	General purpose output 2 or DDR reset output
GPIO3	General purpose output 3 or warm reset input
PGOOD	Power good
GPIO1	General purpose output 1
SYS_BU	Battery back-up power path output
PFI	Power-fail comparator input
IN_nCC	Output indicating power source for battery backup supplies
PGOOD_BU	Power good for backup supplies

(1) Test points are not designed to carry current, they are intended for measuring voltage.

Table 5-3. Jumper Descriptions

Jumper	Description	Default Position
JP1	Ties PWR_EN to VIO or GND	PWR_EN tied to VIO
JP2	Ties DC34_SEL pin to ground. Remove and jump with resistor for alternate voltage selections.	DC34_SEL tied to GND

Table 5-3. Jumper Descriptions (continued)

Jumper	Description	Default Position
JP3	Selects LS1 input between DCDC3 output and external supply from J1	IN_LS1 tied to DC3
JP4	Ties VIO to either DCDC4 output or 3.3-V supply from USB2ANY adaptor (J9). VIO supplies the pull-up voltage for the device I/Os.	VIO tied to V3p3
JP5	Ties AC_DET pin to either VSYS or GND. Tying to GND causes the device to start upon VSYS application.	AC_DET tied to VSYS

6 Setup

Figure 6-1 displays an example setup for using the TPS65218 EVM.

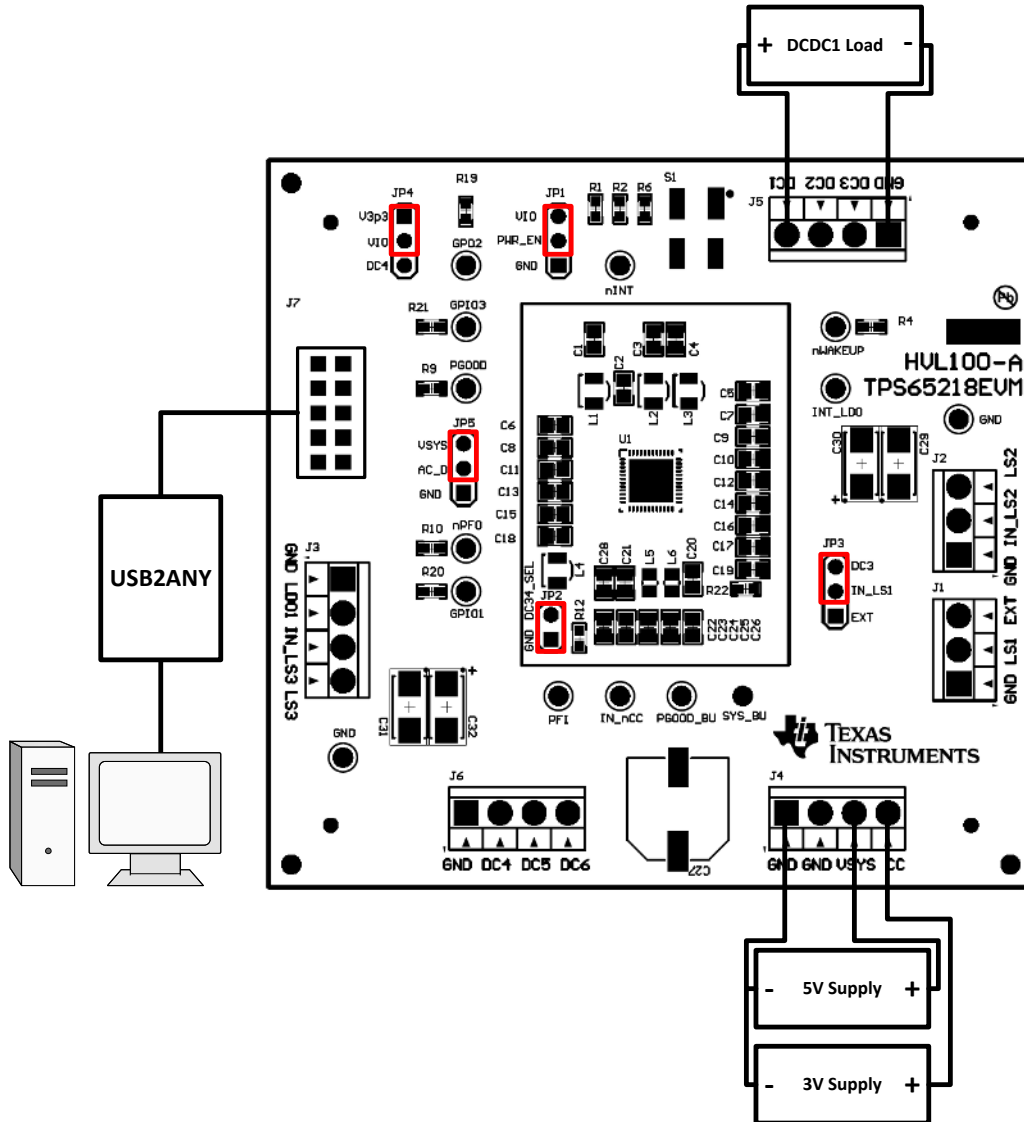

Figure 6-1. TPS65218 EVM Setup

7 Software

7.1 Software Installation Instruction

A GUI is supplied to provide a simple way to communicate to the device via I²C. The GUI can be downloaded from: [IPG-UI EVM GUI](#)

Information on the installation of the IPG-UI can be found in the [IPG-UI User's Guide](#).

You will also need to download the [BOOSTXL-TPS65218 IPG-UI Device Support File](#). After you finish setting up the IPG-UI software, run the installer associated with your operating system to add the TPS65218 device file to your IPG-UI device library.

7.2 Using the TPS65218 GUI

Detailed information regarding the usage of the IPG-UI can also be found in the [IPG-UI User's Guide](#). A brief overview is provided here for reference.

The proper device must first be selected from the "Select Devices" drop-down menu.

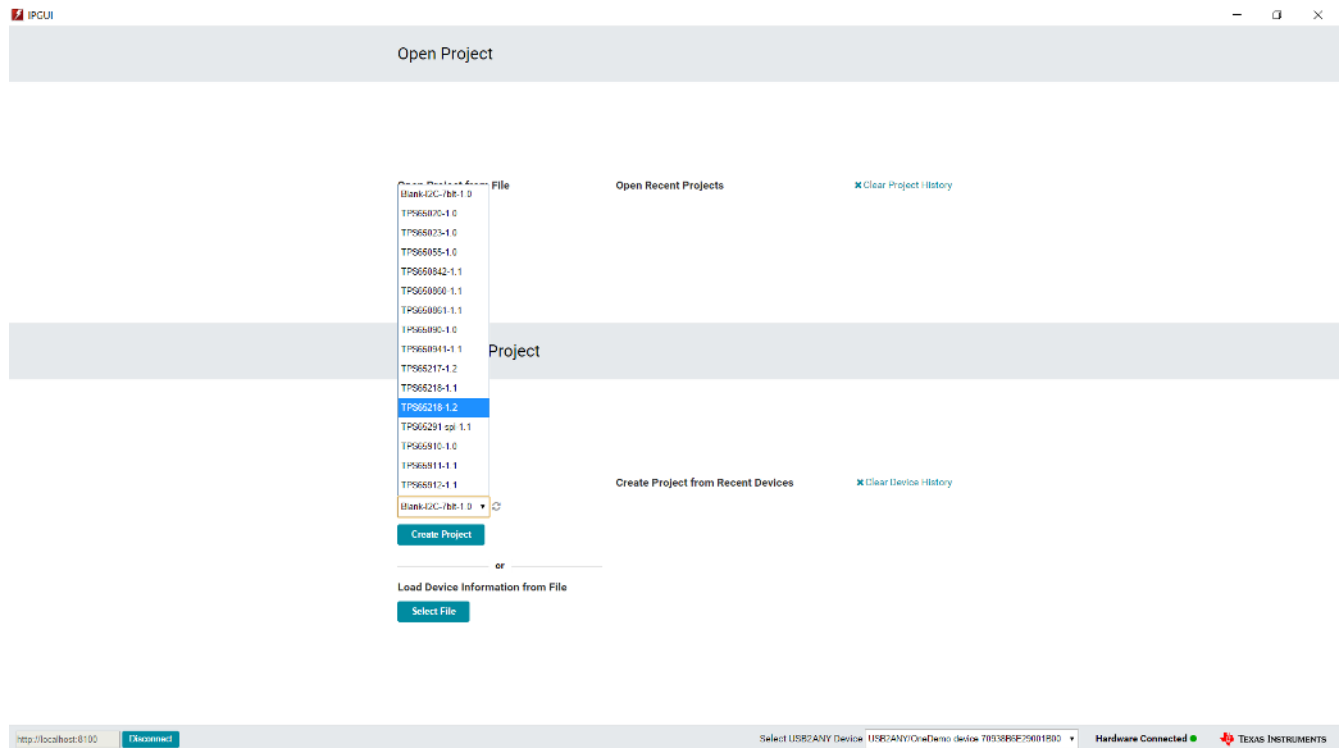

Figure 7-1. GUI front Page

From there, the next screen is the device introduction page, which includes a brief overview as well as the functional block diagram for the device.

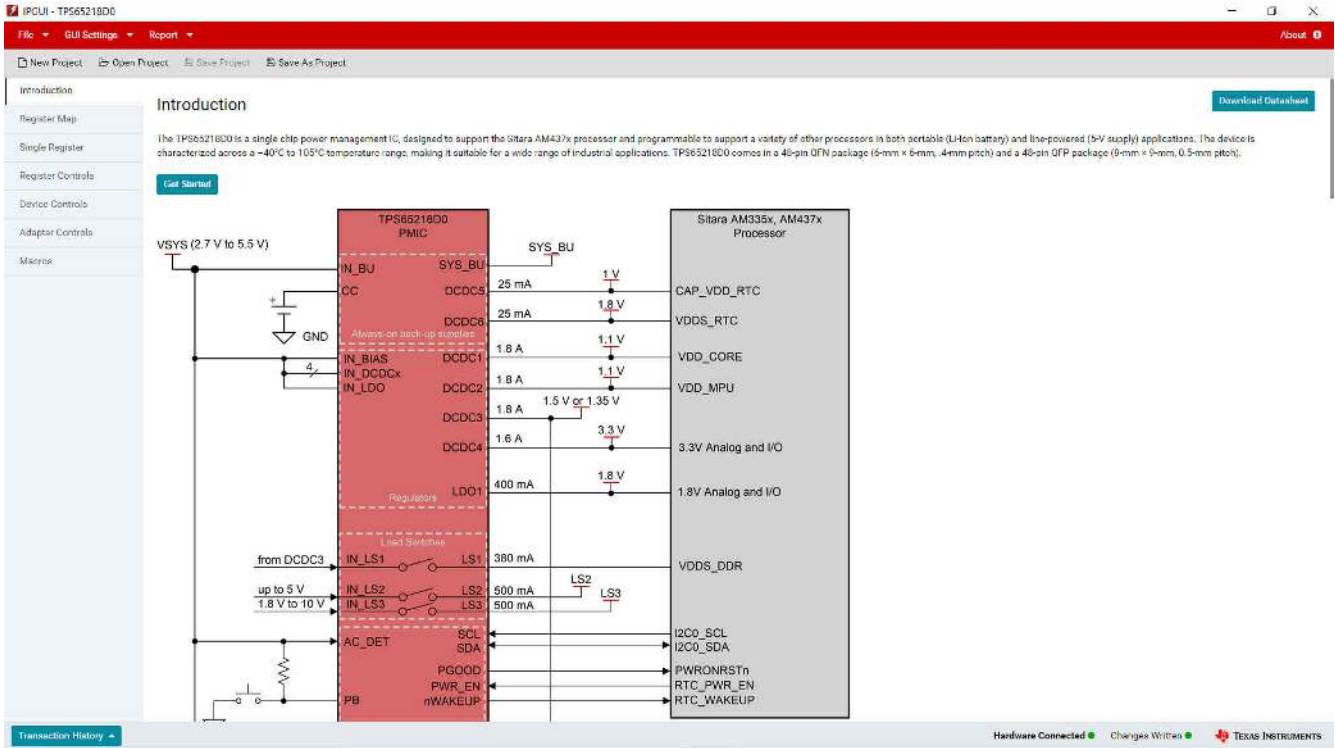

Figure 7-2. GUI Device Introduction

Finally, clicking on "Get Started" or on "Register Map" takes you to the I²C controls for the device sorted by register address.

Register Name	I2C Address	Bits	Value	W	R	AutoRead
CHINFO	0x00	7 6 5 4 3 2 1 0	05		R	
INT1	0x01	7 6 5 4 3 2 1 0	00		R	
INT2	0x02	7 6 5 4 3 2 1 0	00		R	
INT_MASK1	0x03	7 6 5 4 3 2 1 0	00	W	R	
INT_MASK2	0x04	7 6 5 4 3 2 1 0	00	W	R	
STATUS	0x05	7 6 5 4 3 2 1 0	05		R	
CONTROL	0x06	7 6 5 4 3 2 1 0	00	W	R	
FLAG	0x07	7 6 5 4 3 2 1 0	00		R	
PASSWORD	0x10	7 6 5 4 3 2 1 0	00	W	R	
ENABLE1	0x11	7 6 5 4 3 2 1 0	05	W	R	
FNABIF2	0x12	7 6 5 4 3 2 1 0	15	W	R	
CONFIG1	0x13	7 6 5 4 3 2 1 0	4C	W	R	
CONFIG2	0x14	7 6 5 4 3 2 1 0	00	W	R	
CONFIG3	0x15	7 6 5 4 3 2 1 0	00	W	R	
DCDC1	0x16	7 6 5 4 3 2 1 0	DC	W	R	
DCDC2	0x17	7 6 5 4 3 2 1 0	99	W	R	
DCDC3	0x18	7 6 5 4 3 2 1 0	8C	W	R	
DCDC4	0x19	7 6 5 4 3 2 1 0	E2	W	R	

Figure 7-3. GUI Register Map

Alternatively, the part can be controlled using the "Register Controls" tab to sort by functionality rather than by I²C address location.

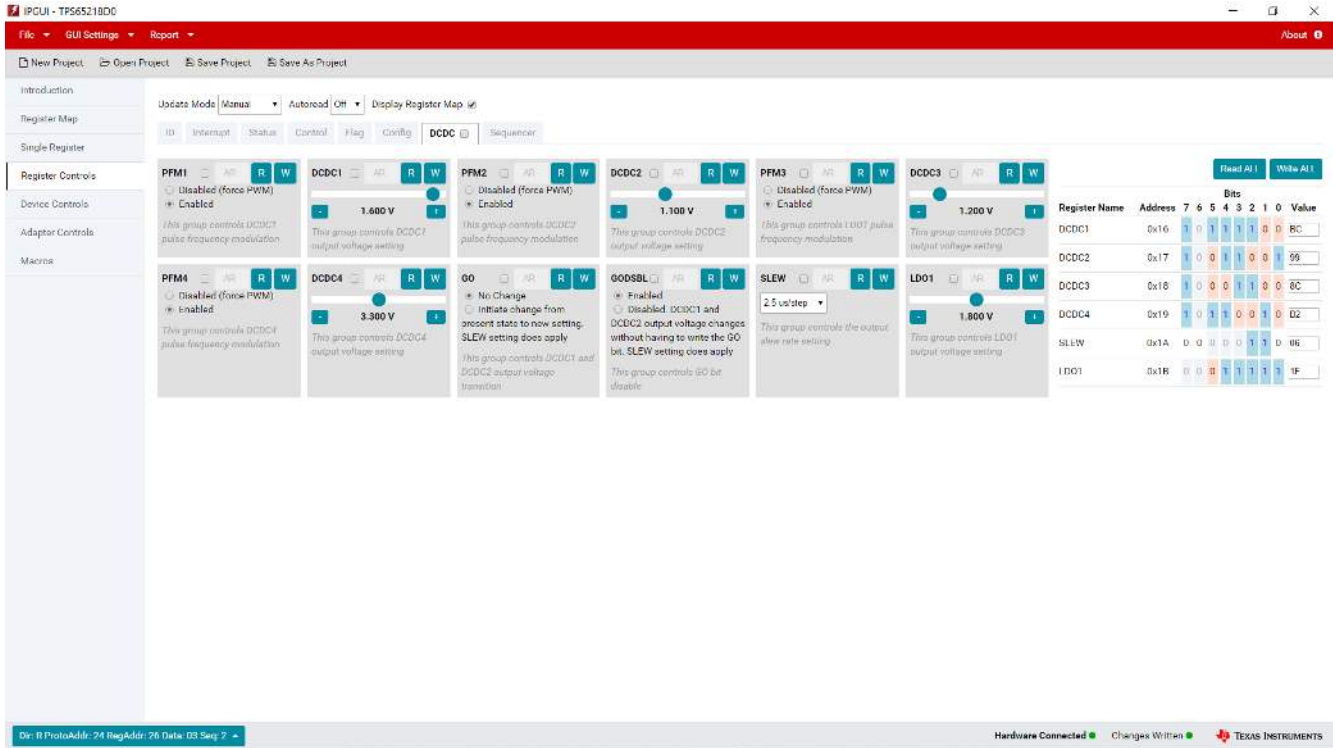

Figure 7-4. GUI Register Controls

With this information, it is possible to begin evaluating the TPS65218 device.

8 Bill of Materials

Table 8-1 lists the BOM for this EVM.

Table 8-1. Bill of Materials

Designator	Description	Value	Voltage Rating	Dielectric	Footprint	Qty.	Manufacturer	Manufacturer PN

10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision A (August 2022) to Revision B (October 2022) Page

- Updated EVM Schematic.....4
- Updated Bill of Materials..... 11

Changes from Revision * (November 2014) to Revision A (August 2022) Page

- Updated the numbering format for tables, figures, and cross-references throughout the document..... 1
 - Changed GUI description..... 2
 - Updated link to software..... 2
 - Changed links to GUI and supporting hardware..... 8
 - Updated descriptions..... 8
 - Changed topic title..... 8
 - Changed steps to use GUI..... 8
 - Added new images..... 8
 - Updated software links..... 8
-
