HIGH SPEED OPERATIONAL AMPLIFIER WITH SWITCH

■ GENERAL DESCRIPTION

The NJM2121 is a dual operational amplifier of 2-INPUT and 1-OUTPUT with analog switch. The NJM2121 can be used as analog switch under the condition of G_V=0dB, as Switch + Amp in order that each gain (A or B) can be adjusted independently. Each amplifier of the NJM2121 has the same electrical characteristics as the NJM4560.

The NJM2121 is suitable for Audio, Video, Electrical musical instrument…etc.

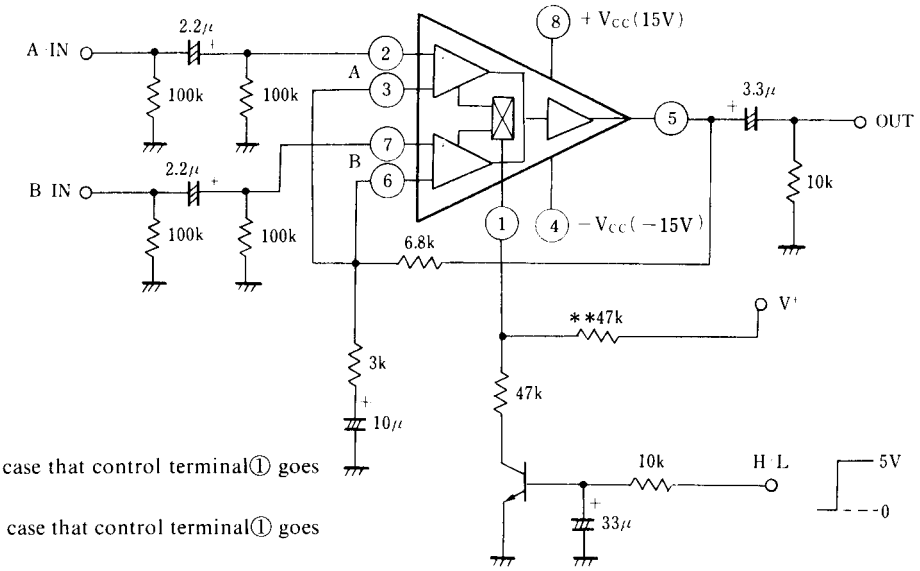
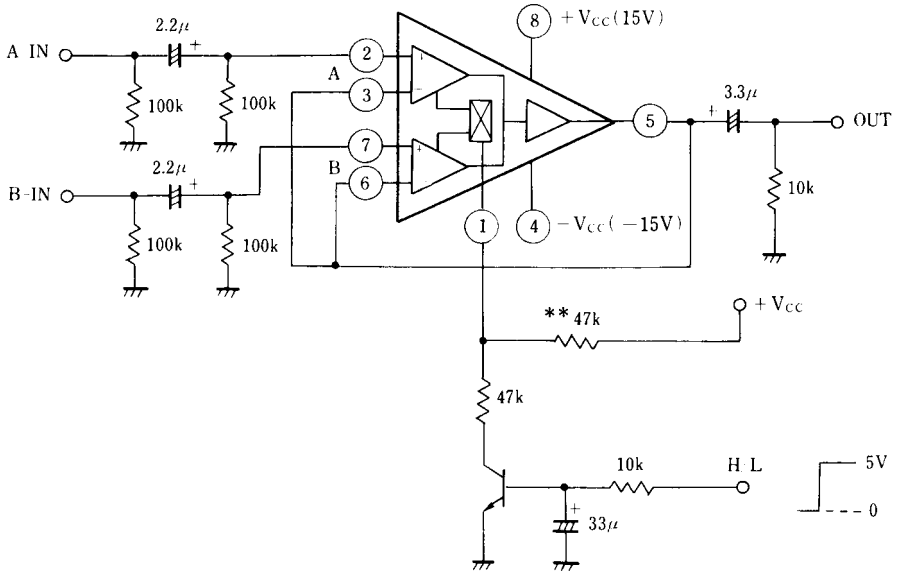
■ APPLICATION CIRCUIT

(1) G_V=10dB FLAT Amp+Analog Switch Circuit



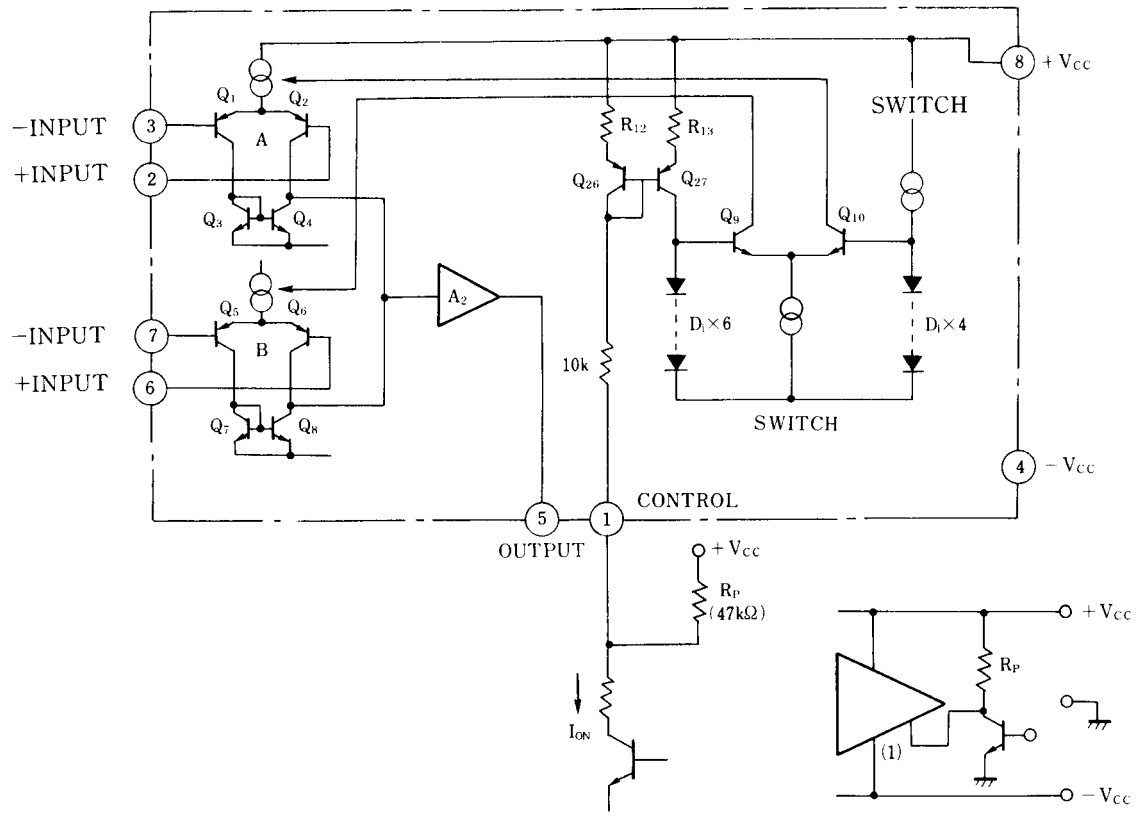
*ch B goes ON in case that control terminal① goes ON.
ch A goes ON in case that control terminal① goes OFF.

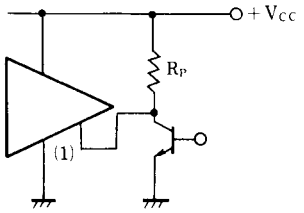
(2) Analog Switch Circuit (G_V=0dB Voltage Follower Amp)

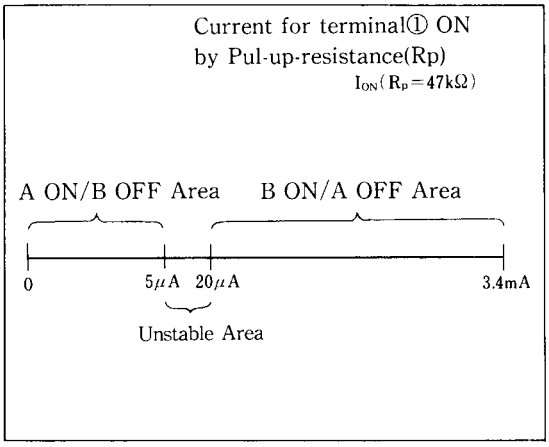


*Resistance(**) is Pull-up resistance for pervent from switching terminal① going ON by reakage of external circuit(TR...etc).

■ **SWITCHING MECHANISM**







Switching Mechanism of NJM2121 is as follows.

Switch signal is communicated in case that V_F of Q26 goes ON on current mirror which is composed with Q26 and Q27.Q10 goes ON by 4diodes of Q10 in case that terminal 1 goes OFF and Amp (ch A) goes active.Q9 goes ON by 6 diodes of Q9 in case that terminal 1 goes ON and Amp (ch B) goes active.So,NJM2121 have merit that drive system is controlled freely. Because drive system is not related to supply voltage system (Single supply type/Two supply type) in order that switch change by current ON/OFF.

But, this switch goes ON by very little current because of signal communicate system which depend on ON of V_F. So, please use NJM2121 under the condition of lowering sensitivity for current ON/OFF by external Pull-up-resistance (R_p)
