onsemi and ONSEMI. and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "onsemi" or its affiliates and/or subsidiaries in the United States and/or other countries. onsemi owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of onsemi product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. onsemi reserves the right to make changes at any time to any products or information herein is provided "as-is" and onsemi makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does onsemi assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using onsemi products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by onsemi. "Typical" parameters which may be provided in onsemi data sheets and/ or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. onsemi does not convey any license under any of its intellectual property rights nor the rights of others. onsemi products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use onsemi products for any such unintended or unauthorized application,

# Self-Protected Low Side Driver with In-Rush Current Management

The NCV8411 is a three terminal protected Low–Side Smart Discrete FET. The protection features include Delta Thermal Shutdown, overcurrent, overtemperature, ESD and integrated Drain to Gate clamping for over voltage protection. The device also offers fault indication via the gate pin. This device is suitable for harsh automotive environments.

## **Features**

- Short Circuit Protection with In-Rush Current Management
- Delta Thermal Shutdown
- Thermal Shutdown with Automatic Restart
- Over Voltage Protection
- Integrated Clamp for Over Voltage Protection and Inductive Switching
- ESD Protection
- dV/dt Robustness
- Analog Drive Capability (Logic Level Input)
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q101 Qualified and PPAP Capable
- These Devices are Pb-Free and are RoHS Compliant

## **Typical Applications**

- Switch a Variety of Resistive, Inductive and Capacitive Loads
- Can Replace Electromechanical Relays and Discrete Circuits
- Automotive / Industrial

## APPLICATION INFORMATION

## **Circuit Protection Features**

The NCV8411 has three main protections. Current Limit, Thermal Shutdown and Delta Thermal Shutdown. These protections establish robustness of the NCV8411.

## **Current Limit and Short Circuit Protection**

The NCV8411 has current sense element. In the event that the drain current reaches designed current limit level, integrated Current Limit protection establishes its constant level.

## **Delta Thermal Shutdown**

Delta Thermal Shutdown (DTSD) Protection increases higher reliability of the NCV8411. DTSD consist of two independent temperature sensors – cold and hot sensors. The

NCV8411 establishes a slow junction temperature rise by sensing the difference between the hot and cold sensors. ON/OFF output cycling is designed with hysteresis that results in a controlled saw tooth temperature profile (Figure 23). The die temperature slowly rises (DTSD) until the absolute temperature shutdown (TSD) is reached around 175°C.

## **Thermal Shutdown with Automatic Restart**

Internal Thermal Shutdown (TSD) circuitry is provided to protect the NCV8411 in the event that the maximum junction temperature is exceeded. When activated at typically 175°C, the NCV8411 turns off. This feature is provided to prevent failures from accidental overheating.
